Systems Biology of RNA Binding Proteins - Gene W. Yeo
2014-09-08

After transcription in the nucleus, RNA binding proteins (RBPs) recognize cis-regulatory RNA elements within pre-

mRNA sequence to form mRNA-protein (mRNP) complexes. Similarly to DNA binding proteins such as transcription factors that regulate gene expression by binding to DNA elements in the promoters of genes, RBPs regulate the fate of target RNAs by interacting with specific sequences or RNA secondary structural features within the transcribed RNA molecule. The set of functional RNA elements recognized by RBPs within target RNAs and which control the temporal, functional and spatial dynamics of the target RNA define a putative "mRNP code". These cis-regulatory RNA elements can be found in the 5' and 3' untranslated regions (UTRs), introns, and exons of all protein-coding genes. RNA elements in 5' and 3' UTRs are frequently involved in targeting RNA to specific cellular compartments, affecting 3' end formation, controlling RNA stability and regulating mRNA translation. RNA elements in introns and exons are known to function as splicing enhancers

or silencers during the splicing process from pre-mRNA to mature mRNA. This book provides case studies of RNA binding proteins that regulate aspects of RNA processing that are important for fundamental understanding of diseases and development. Chapters include systems-level perspectives, mechanistic insights into RNA processing and RNA Binding proteins in genetic variation, development and disease. The content focuses on systems biology and genomics of RNA Binding proteins and their relation to human diseases. [Expert WSS 3.0 and MOSS 2007 Programming](#) - Shahram Khosravi 2008-11-13

Times of Transition - Sylvie Honigman 2021-06-30

This multidisciplinary study takes a fresh look at Judean history and biblical literature in the late fourth and third centuries BCE. In a major reappraisal of this era, the contributions to this volume

depict it as one in which critical changes took place. Until recently, the period from Alexander's conquest in 332 BCE to the early years of Seleucid domination following Antiochus III's conquest in 198 BCE was reputed to be poorly documented in material evidence and textual production, buttressing the view that the era from late Persian to Hasmonean times was one of seamless continuity. Biblical scholars believed that no literary activity belonged to the Hellenistic age, and archaeologists were unable to refine their understanding because of a lack of secure chronological markers. However, recent studies are revealing this period as one of major social changes and intense literary activity. Historians have shed new light on the nature of the Hellenistic empires and the relationship between the central power and local entities in ancient imperial settings, and the redating of several biblical texts to the third century BCE challenges the traditional

periodization of Judean history. Bringing together Hellenistic history, the archaeology of Judea, and biblical studies, this volume appraises the early Hellenistic period anew as a time of great transition and change and situates Judea within its broader regional and transregional imperial contexts.

Strengthening Forensic Science in the United States - National Research Council 2009-07-29

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of

wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Ineffective Legal Assistance

- Jill E.B. Coster van Voorhout
2016-12-15

In Ineffective Legal Assistance, Redress for the Accused in Dutch Criminal Procedure and

Compliance with ECHR Case Law, Dr. Jill E.B. Coster van Voorhout, LL.M, MSc examines the extent to which ineffective legal assistance and its redress for the accused in the Netherlands abide by minimum guarantees set by the European Court on Human Rights regarding the right to an effective defence in a fair trial. Coster van Voorhout demonstrates convincingly that, currently, Dutch law and case law do not guarantee the right to effective legal assistance and are not fully compliant with related minimum guarantees. This book offers recommendations as to how redress for ineffective legal assistance could better conform to the relevant ECHR standards.
