This book demonstrates the inevitability of a continuously growing role of data in our society and it stresses that this role does not need to be threatening: to the contrary, collection and analysis of data can help us prevent traffic jams, suppress epidemics, or produce tailor made medicine. The authors sketch the contours of a new information society, in which everything will be measured from our heartbeat during our morning run to the music we listen to and our walking patterns through department stores and they discuss the resistances within the society that have to be overcome. Sander Klous holds a PhD in High Energy Physics and contributed to the discovery of the Higgs boson at CERN (Nobel prize 2013). Klous works at KPMG and is professor in Big Data at the University of Amsterdam. Nart Wielaard is a self-employed consultant and business writer. **The Right It** - Alberto Savoia 2019-02-26

In this accessible, prescriptive, and widely applicable manual, Google's first engineering director and current Innovation Agitator Emeritus provides critical advice for rethinking how we launch a new idea, product, or business, insights to help successfully beat the law of market failure: that most new products will fail, even if competently executed. Millions of people around the world are working to introduce new ideas. Some will turn out to be stunning successes and have a major impact on our world and our culture: The next Google, the next Polio vaccine, the next Harry Potter, the next Red Cross, the next Ford Mustang. Others successes will be smaller and more personal, but no less meaningful: A restaurant that becomes a neighborhood favorite, a biography that tells an important story, a local nonprofit that cares for abandoned pets. Simultaneously, other groups are working equally hard to develop new ideas that, when launched, will fail. Some will fail spectacularly and publicly: New Coke, the movie John Carter, the Ford Edsel. Others failures will be smaller and more private, but no less failure: A home-based business that never takes off, a children's book that neither publishers nor children have any interest in, a charity for a cause too few people care about. Most people believe that their venture will be successful. But the law of market failure tells us that up to 90 percent of most new products, services, businesses, and initiatives will fail soon after launch—regardless of how promising they sound, how much we commit to them, or how well we execute them. This is a hard fact to accept. Combining detailed case studies with personal insight drawn from his time at Google, his experience as an entrepreneur and consultant, and his lectures at Stanford University and Google, Alberto Savoia offers an unparalleled approach to beating the beast that is market failure: "Make sure you are building The Right It before you build It right," he advises. In The Right It, he provides lessons on creating your own hard data, a strategy for market engagement, and an introduction to the concept of a pretotype (not a prototype). Groundbreaking, entertaining, and highly practical, this essential guide delivers a proven formula for ensuring ideas, products, services, and businesses succeed.
