Uses of Instructional Television in Engineering Education in the United States - Eugene R. Chenette 1985

BIO2010 - National Research Council 2003-02-13

Biological sciences have been revolutionized, not only in the way research is conducted—“with the introduction of techniques such as recombinant DNA and digital technology”—but also in how research findings are communicated among professionals and to the public. Yet, the undergraduate programs that train biology researchers remain much the same as they were before these fundamental changes came on the scene. This new volume provides a blueprint for bringing undergraduate biology education up to the speed of today's research fast track. It includes recommendations for teaching the next generation of life science investigators, through: Building a strong interdisciplinary curriculum that includes physical science, information technology, and mathematics. Eliminating the administrative and financial barriers to cross-departmental collaboration. Evaluating the impact of medical college admissions testing on undergraduate biology education. Creating early opportunities for independent research. Designing meaningful laboratory experiences into the curriculum. The committee presents a dozen brief case studies of exemplary programs at leading institutions and lists many resources for biology educators. This volume will be important to biology faculty, administrators, practitioners, professional societies, research and education funders, and the biotechnology industry.

Teaching for Transfer - Anne McKeough 2013-12-16

The transfer of learning is universally accepted as the ultimate aim of teaching. Facilitating knowledge transfer has perplexed educators and psychologists over time and across theoretical frameworks; it remains a central issue for today's practitioners and theorists. This volume examines the reasons for past failures and offers a reconceptualization of the notion of knowledge transfer, its problems and limitations, as well as its possibilities. Leading scholars outline programs of instruction that have effectively produced transfer at a variety of levels from kindergarten to university. They also explore a broad range of issues related to learning transfer including conceptual development, domain-specific knowledge, learning strategies, communities of learners, and disposition. The work of these contributors epitomizes theory-practice integration and enables the reader to review the reciprocal relation between the two that is so essential to good theorizing and effective teaching.

Anonymity in Collaboration - Ruiling Lu 2011-08-11

This study compared the effects of anonymous e-peer review with identifiable e-peer review on student writing performance and perceived learning satisfaction. It also investigated whether anonymous e-peer review facilitated a greater amount of critical peer feedback.

Quasiexperimental design was used to test group differences on the dependent variables. Participants were forty-eight freshmen enrolled in two English composition classes at an American urban university. The two intact classes taught by the same instructor were randomly assigned to the anonymous e-peer review group and the identifiable e-peer review group. The results of the experiment showed that students in the anonymous e-peer review group outperformed their counterparts in the identifiable e-peer review group on writing performance; students in the anonymous e-peer review group provided a greater amount of critical feedback and lower ratings on their peers writing. No significant differences between the anonymous e-peer review group and the identifiable e-peer review group were found on student learning satisfaction.
