Coating Application for Piping, Valves and Actuators in Offshore Oil and Gas Industry - Karan Sotoodeh 2022-09-14
This book looks at the applications of coating in piping, valves and actuators in the offshore oil and gas industry. Providing a key guide for professionals and students alike, it highlights specific coating standards within the industry, including ISO, NORSOK, SSPC and NACE. In the corrosive environment of a seawater setting, coatings to protect pipes, valves and actuators are essential. This book provides both the theory

behind these coatings and practical applications, including case studies from multinational companies. It covers different offshore zones and their corrosivity level alongside the different types of external corrosion, such as stress cracking and hydrogen-induced stress cracking. The key coatings discussed are zinc-rich coatings, thermal spray zinc or aluminum, phenolic epoxy and passive fire protection, with a review of their defects and potential failures. The book also details the role of coating inspectors and explains how to diagnose faults. Case studies from companies such as Aker Solutions, Baker Hughes, Equinor and British Petroleum illustrate the wide range of industrial applications of coating technologies. This book is of interest to engineers and students in materials, coating, mechanical, piping or petroleum engineering.

Hydroblasting and Coating of Steel Structures - A. Momber 2003-12-18

KEY FEATURES: • This technique is growing in importance. • The first comprehensive book in this subject. A practical and comprehensive account of the technology and applications of hydroblasting, a technique used more and more in the preparation of steel and other surfaces. Steel surfaces will corrode unless they are properly prepared and coated. Such corrosion can have disastrous effects (eg bridge collapse) therefore the preparation of the surface is of major importance. Due to environmental pressure to move away from grit-blasting, high-pressure water can now be used to prepare surfaces, with few environmental costs. This book systematically and critically reviews the state of current hydroblasting technology and its applications. The book is essentially practical in nature and is written by an expert in the field.

Stahlbau-Kalender 2017 - Ulrike Kuhlmann 2017-05-05

Dauerhaftigkeit ist die Zuverlässigkeit der Werkstoffe und Konstruktionen, während der vorgesehenen Nutzungsdauer gegenüber

Einwirkungen widerstandsfähig zu sein. Für eine ausreichende Dauerhaftigkeit müssen viele Voraussetzungen erfüllt sein, die entweder bei Planung und Fertigung eines Neubaus berücksichtigt werden müssen, oder die Unterhaltung und Überwachung bestehender Tragwerke betreffen. Von besonderer Bedeutung ist die Dauerhaftigkeit für die Industrietragwerke und die Brücken wegen der hohen Lebensdauern. Der Themenbogen spannt sich deshalb von der Werkstoffwahl über Fragen der Konstruktion und Ermüdung, Prüfung und Bewertung im Bestand bis hin zum Korrosionsschutz. Hinsichtlich der Stahlsortenauswahl werden grundsätzliche Hinweise gegeben und die Regelungen in DIN EN 1993 Teil 1-10 erläutert. Mit Korrosionsschutz und Feuerverzinken befassen sich zwei Beiträge. Die richtige Bewertung von Altstahlkonstruktionen kann Ressourcen schonen. Ein klassisches Gebiet des Stahlbaus sind die Ingenieurtragwerke des Industriebaus. Daher befassen sich Beiträge über Hallentragwerke und Kranbahnen, Schornsteine, Maste und Türme sowie Silos und Tanks mit aktuellen Entwicklungen und dem Stand der Technik. Die Erläuterungen zur neuen EU-BauPVO und dem neuen bauaufsichtlichen Konzept aus erster Hand sind dringend nötig, denn es kommen die CE-Kennzeichnung von Bauprodukten sowie Marktüberwachungsbehörden und EU-Kommission anstelle der wohlbekannten Bauregelliste. Der Stahlbau-Kalender ist ein Wegweiser für die richtige Berechnung und Konstruktion im gesamten Stahlbau, er dokumentiert und kommentiert verlässlich den aktuellen Stand der Stahlbau-Regelwerke. Zur bauaufsichtlichen Einführung von Eurocode 3 werden seit der Ausgabe 2011 systematisch alle Teile der Norm mit ihren Nationalen Anhängen kommentiert.

Stahlbau Kalender 2020 - Ulrike Kuhlmann 2020-05-12

Der Stahlbau-Kalender dokumentiert verlässlich und aus erster Hand den aktuellen Stand der Stahlbau-Regelwerke. Seit der Ausgabe 2011

werden systematisch alle Teile von Eurocode 3 mit ihren Nationalen Anhängen kommentiert. In dieser Ausgabe werden neben der Aktualisierung von Teil 1-1 "Allgemeine Bemessungsregeln und Regeln für den Hochbau" auch Erläuterungen für die neuen Regeln der zukünftigen Eurocode-Generation präsentiert. Außerdem wird für den Metallleichtbau auf die sich abzeichnenden Änderungen und Ergänzungen in Eurocode 3 Teil 1-3 für kaltgeformte Bauteile und Bleche und in Eurocode 9 Teil 1-4 eingegangen. Der Stahlbau ist in grundlegender Weise mit dem Leichtbau und der Anwendung von faserverstärkten Kunststoffen verbunden. Die funktionalen und wirtschaftlichen Vorteile, wie z. B. geringes Eigengewicht, hohe mechanische Festigkeit, einfache Montage, niedrige thermische Leitfähigkeit und vielfältige architektonische Gestaltungsmöglichkeiten, werden für Sandwichelemente, im Membranbau, für temporäre und für fliegende Bauten bis hin zu Leichtbaubrücken genutzt. Zu diesen Themen enthält das Buch Beiträge über die ingenieurmäßige Auslegung von Bauteilen mit Erläuterungen zu den Konstruktionsregeln. Bei Leichtbau-Konstruktionen gilt es, ein besonderes Augenmerk auf das Schwingungsverhalten zu legen. Dieses wird in zwei Beiträgen, neben der Erdbebenbemessung, besonders vertieft. Ein weiteres grundlegendes Thema des Stahlbaus - der Korrosionsschutz - wird in zwei ausführlichen Beiträgen mit allen Aspekten und Möglichkeiten umfassend und aktuell behandelt. Das Buch ist ein Wegweiser für die richtige Berechnung und Konstruktion im gesamten Stahlbau mit neuen Themen in jeder Ausgabe. Es stellt anwendungsbereites Wissen mit zahlreichen Beispielen zur Verfügung. Herausragende Autoren aus der Industrie, aus Ingenieurbüros und aus der Forschung vermitteln Grundlagen und geben praktische Hinweise.

Mordell–Weil Lattices - Matthias Schütt

2019-10-17

This book lays out the theory of Mordell–Weil lattices, a very powerful and influential tool at the crossroads of algebraic geometry and number theory, which offers many fruitful connections to other areas of mathematics. The book presents all the ingredients entering into the theory of Mordell–Weil lattices in detail, notably, relevant portions of lattice theory, elliptic curves, and algebraic surfaces. After defining Mordell–Weil lattices, the authors provide several applications in depth. They start with the classification of rational elliptic surfaces. Then a useful connection with Galois representations is discussed. By developing the notion of excellent families, the authors are able to design many Galois representations with given Galois groups such as the Weyl groups of E6, E7 and E8. They also explain a connection to the classical topic of the 27 lines on a cubic surface. Two chapters deal with elliptic K3 surfaces, a pulsating area of recent research activity which highlights many central properties of Mordell–Weil lattices. Finally, the book turns to the rank problem—one of the key motivations for the introduction of Mordell–Weil lattices. The authors present the state of the art of the rank problem for elliptic curves both over Q and over C(t) and work out applications to the sphere packing problem. Throughout, the book includes many instructive examples illustrating the theory.

Ausführung von Stahlbauten - Herbert Schmidt 2019-04-10

Nachdem sich die Vorgängerauflage des Kommentars von 2012 zur unverzichtbaren Arbeitshilfe für alle mit dem Stahlbau befassten Fachleute entwickelt hat, wird nun eine überarbeitete und erweiterte Auflage vorgelegt, die die zwischenzeitlichen Änderungen an den kommentierten Normen berücksichtigt. Dieser Kommentar enthält Erläuterungen zu den technischen Regeln für die Ausführung von Stahlbauten in DIN EN 1090-2 "Ausführung von

Stahltragwerken und Aluminiumtragwerken - Teil 2: Technische Regeln für die Ausführung von Stahltragwerken" und DIN EN 1090-4 "Ausführung von Stahltragwerken und Aluminiumtragwerken - Teil 4: Technische Anforderungen an kaltgeformte, tragende Bauelemente aus Stahl und kaltgeformte, tragende Bauteile für Dach-, Decken-, Boden- und Wandanwendungen". Er liefert wichtige Zusatz- und Hintergrundinformationen und stellt darüber hinaus Verknüpfungen zu angrenzenden Disziplinen dar. Auszüge aus zitierten Regelwerken werden wiedergegeben und die Umsetzung der Normregelungen anhand von Musterbeispielen illustriert. Eine der wesentlichen Überarbeitungen der DIN EN 1090-2 betraf die technischen Anforderungen an tragende dünnwandige kaltgeformte Bauelemente und Bauteile aus Stahl. Sie waren nicht umfassend genug behandelt. Dieses Teilgebiet des Stahlbaus wurde deshalb aus der bisherigen DIN EN 1090-2 herausgelöst und in die neue Teilnorm DIN EN 1090-4 überführt um mit der notwendigen Ausführlichkeit dargestellt zu werden. DIN EN 1090-4 wurde 2018 veröffentlicht und ist im vorliegenden Buch erstmalig kommentiert. Die aktuellen Fassungen beider Normteile im Volltext sind auf der dem Buch beigefügten CD-ROM enthalten. Die in der Vorauflage von "Ausführung von Stahlbauten" ebenfalls kommentierte DIN EN 1090-1 ist in der Neuauflage nicht enthalten, da sie keine technischen Regeln für das Bauen, sondern ausschließlich Regeln für den formalen Konformitätsnachweis und die CE-Kennzeichnung des Bauproduktes "Tragende Stahlbauteile" enthält. Die Überarbeitung ist noch nicht abgeschlossen und der Abdruck der Fassung von 2012-02 ist nicht sinnvoll. Der vorliegende Kommentar ist eine Hilfestellung bei der täglichen Arbeit für alle Fachleute, die sich planend, bauend, prüfend oder überwachend mit der Ausführung von Stahlbauten in Deutschland oder im europäischen Ausland befassen:

Ingenieure, Techniker, Meister, technische Kaufleute usw. Der Kommentar folgt streng der Gliederung der beiden kommentierten Normteile, ohne jedoch deren Texte zu wiederholen. Er gibt Zusatz- und Hintergrundinformationen, stellt Verknüpfungen zu angrenzenden Bereichen dar, gibt wichtige Auszüge aus zitierten Regelwerken wieder und illustriert anhand von Musterbeispielen die Umsetzung der Normregelungen. Die Autoren sind selbst an der Erarbeitung der Normen beteiligt, die Kommentierungen und Hintergrundinformationen stammen also aus "erster Hand".

A Primer in Density Functional Theory - Carlos Fiolhais 2008-01-11

Density functional theory (DFT) is by now a well-established method for tackling the quantum mechanics of many-body systems. Originally applied to compute properties of atoms and simple molecules, DFT has quickly become a work horse for more complex applications in the chemical and materials sciences. The present set of lectures, spanning the whole range from basic principles to relativistic and time-dependent extensions of the theory, is the ideal introduction for graduate students or nonspecialist researchers wishing to familiarize themselves with both the basic and most advanced techniques in this field.

Guide de sous-traitance des traitements de surface et de la peinture industrielle - CHEVALIER Jean 2012-11-05

Les traitements de surface et les revêtements, peinture ou émail, potentialisent les propriétés des métaux en leur offrant une protection, une résistance aux agressions, une qualité esthétique. Ils sont divers et soumis à des normes strictes. Le Guide de sous-traitance des traitements de surface et de la peinture industrielle répond au besoin concret du

donneur d'ordre qui, une fois le traitement décidé par son bureau d'études ou par son propre client, doit rédiger le contrat et les spécifications techniques nécessaires au façonnier, permettant de garantir la bonne exécution des travaux, sans avoir pour cela à connaître la théorie de la corrosion des métaux ni précisément les compositions chimiques utilisées. Le recours à des façonniers qui ont entrepris une démarche qualité sanctionnée, de préférence, par une certification délivrée par un organisme indépendant, facilite le dialogue. C'est pourquoi la première partie de cet ouvrage déroule le processus Achat tel qu'il pourrait être décrit dans le Manuel Qualité du donneur d'ordre, en détaillant, pour chacune des activités du processus, les particularités de l'achat d'une prestation de traitement de surface ou de peinture. La connaissance des principes de traitement reste indispensable, ainsi que celle des contrôles réalisables et des informations nécessaires au façonnier. La deuxième partie décrit donc les principaux traitements et revêtements : chimiques, électrolytiques, sous vide, par immersion, par projection thermique ou au tampon, avec pour chacun d'eux ce que le client doit spécifier au façonnier et ce qui doit être vérifié. Une large place est faite à la préparation de surface, qui est cruciale pour la réussite du traitement ou du revêtement. La troisième partie est principalement consacrée à la peinture industrielle (conditions d'application, contrôle, colorimétrie, vocabulaire), ainsi qu'à l'émaillage des métaux. Pour chacun des traitements, revêtements ou peinture, les causes possibles d'anomalie sont indiquées afin de faciliter le dialogue avec le fournisseur. L'ensemble des informations s'appuie sur les normes NF ou ISO en vigueur. Pour chaque traitement les normes essentielles sont indiquées en tête du chapitre correspondant. Enfin, les normes relatives au traitement de surface et à la peinture industrielle sont répertoriées en fin d'ouvrage, selon un

classement numérique. Ce guide s'adresse aux industriels qui souhaitent faire réaliser sur des pièces métalliques des travaux de traitement de surface ou de peinture, que ce soit dans un but de protection, de décoration, ou tout autre but technique, en se conformant aux normes en vigueur.

Characterization of Polymer Blends - Sabu Thomas 2015-02-09

Filling the gap for a reference dedicated to the characterization of polymer blends and their micro and nano morphologies, this book provides comprehensive, systematic coverage in a one-stop, two-volume resource for all those working in the field. Leading researchers from industry and academia, as well as from government and private research institutions around the world summarize recent technical advances in chapters devoted to their individual contributions. In so doing, they examine a wide range of modern characterization techniques, from microscopy and spectroscopy to diffraction, thermal analysis, rheology, mechanical measurements and chromatography. These methods are compared with each other to assist in determining the best solution for both fundamental and applied problems, paying attention to the characterization of nanoscale miscibility and interfaces, both in blends involving copolymers and in immiscible blends. The thermodynamics, miscibility, phase separation, morphology and interfaces in polymer blends are also discussed in light of new insights involving the nanoscopic scale. Finally, the authors detail the processing-morphology-property relationships of polymer blends, as well as the influence of processing on the generation of micro and nano morphologies, and the dependence of these morphologies on the properties of blends. Hot topics such as compatibilization through nanoparticles, miscibility of new biopolymers and nanoscale investigations of interfaces in blends are also addressed. With its application-oriented

approach, handpicked selection of topics and expert contributors, this is an outstanding survey for anyone involved in the field of polymer blends for advanced technologies.

The midship sections of various ship types are introduced, together with structural continuity and alignment in ship structures. With regard to construction materials, the book discusses steel, aluminum alloys and fiber reinforced composites. Various methods of steel material preparation are discussed, and plate cutting and forming of plates and sections are explained. The concept of line heating for plate bending is introduced.Welding power source characteristics, metal transfer mechanisms, welding parameters and their effects on the fusion zone, weld deposit, and weld bead profile are discussed in detail. Various fusion welding methods, MMAW, GMAW, SAW, Electroslag welding and Electrogas welding and single side welding are explained in detail. Friction stir

welding as one of the key methods of solid state welding as applied to aluminum alloys is also addressed. The mechanisms of residual stress formation and distortion are explained in connection with stiffened panel fabrication, with an emphasis on weld induced buckling of thin panels. Further, the basic principles of distortion prevention, in-process distortion control and mitigation techniques like heat sinking, thermo-mechanical tensioning etc. are dealt with in detail. In its final section, the book describes in detail various types of weld defects that are likely to occur, together with their causes and remedial measures. The nondestructive testing methods that are most relevant to ship construction are explained. Lastly, a chapter on accuracy control based on statistical principles is included, addressing the need for a suitable mechanism to gauge the ranges of variations so that one can quantitatively target the end product accuracy.

Modern Coordination Chemistry - Neil Winterton 2007-10-31
Coordination chemistry, as we know it today, has been shaped by major figures from the past, one of whom was Joseph Chatt. Beginning with a description of Chatt's career presented by co-workers, contemporaries and students, this fascinating book then goes on to show how many of today's leading practitioners in the field, working in such diverse areas as phosphines, hydrogen complexes, transition metal complexes and nitrogen fixation, have been influenced by Chatt. The reader is then brought right up-to-date with the inclusion of some of the latest research on these topics, all of which serves to

underline Chatt's continuing legacy. Intended as a permanent record of Chatt's life, work and influence, this book will be of interest to lecturers, graduate students, researchers and science historians.

Differential Equations and Dynamical Systems - Lawrence Perko 2012-12-06

Mathematics is playing an ever more important role in the physical and biological sciences, provoking a blurring of boundaries between scientific disciplines and a resurgence bf interest in the modern as well as the clas sical techniques of applied mathematics. This renewal of interest, both in research and teaching, has led to the establishment of the series: Texts in Applied Mat!!ematics (TAM). The development of new courses is a natural consequence of a high level of excitement oil the research frontier as newer techniques, such as numerical and symbolic cotnputer systems, dynamical systems, and chaos, mix with and reinforce the traditional methods of applied mathematics. Thus, the purpose of this textbook series is to meet the current and future needs of these advances and encourage the teaching of new courses. TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses, and will complement the Applied Math ematical Sciences (AMS) series, which will focus on advanced textbooks and research level monographs. Preface to the Second Edition This book covers those topics necessary for a clear understanding of the qualitative theory of ordinary differential equations and the concept of a dynamical

system. It is written for advanced undergraduates and for beginning graduate students. It begins with a study of linear systems of ordinary differential equations, a topic already familiar to the student who has completed a first course in differential equations.

Jet Cutting Technology - A. Lichtarowicz 2012-12-06

This volume contains papers presented at the 11th International Conference on Jet Cutting Technology, held at St. Andrews, Scotland, on 8-10 September 1992. Jetting techniques have been successfully applied for many years in the field of cleaning and descaling. Today, however, jet cutting is used in operations as diverse as removing cancerous growths from the human body, decommissioning sunsea installations and disabling explosive munitions. The diversity is reflected in the papers presented at the conference. The papers were divided into several main sections: jetting basics -- materials; jetting basics -- fluid mechanics; mining and quarrying; civil engineering; new developments; petrochem; cleaning and surface treatment; and manufacturing. The high quality of papers presented at the conference has further reinforced its position as the premier event in the field. The volume will be of interest to researchers, developers and manufacturers of systems, equipment users and contractors.

Enantiomer Separation - Fumio Toda 2007-11-04

In spite of important advances in asymmetric synthesis, chiral compounds cannot all be obtained in a pure state by asymmetric synthesis. As a result, enantiomer separation remains an important technique for obtaining optically active materials. Although asymmetric synthesis is a once-only procedure, an enantiomer separation process can be repeated until the optically pure sample is obtained. This

book discusses several new enantiomer separation methods using modern techniques developed by experts in the field. These methods consist mainly of the following three types: 1) Enantiomer separation by inclusion complexation with a chiral host compound 2) Enantiomer separation using biological methods 3) Enantiomer separation by HPLC chromatography using a column containing a chiral stationary phase. Separation of a racemic compound has been called “optical resolution” or simply “resolution”. Nowadays, the descriptions “enantiomer resolution” or “enantiomer separation” are also commonly used. Accordingly, “Enantiomer Separation” is used in the title of this book. The editor and all chapter contributors hope that this book is helpful for scientists and engineers working in this field.

Energy Efficiency in Buildings - José Manuel Andújar 2020-04-28

Buildings are one of the main causes of the emission of greenhouse gases in the world. Europe alone is responsible for more than 30% of emissions, or about 900 million tons of CO2 per year. Heating and air conditioning are the main cause of greenhouse gas emissions in buildings. Most buildings currently in use were built with poor energy efficiency criteria or, depending on the country and the date of construction, none at all. Therefore, regardless of whether construction regulations are becoming stricter, the real challenge nowadays is the energy rehabilitation of existing buildings. It is currently a priority to reduce (or, ideally, eliminate) the waste of energy in buildings and,

at the same time, supply the necessary energy through renewable sources. The first can be achieved by improving the architectural design, construction methods, and materials used, as well as the efficiency of the facilities and systems; the second can be achieved through the integration of renewable energy (wind, solar, geothermal, etc.) in buildings. In any case, regardless of whether the energy used is renewable or not, the efficiency must always be taken into account. The most profitable and clean energy is that which is not consumed.
