Psychology of Communication - Jessica Röhner 2021-05-31

Concrete fields of application, stumbling blocks (e.g. intercultural differences in communication), practical examples and digressions in the book round off what has been read and consolidate what has been learned. In addition, free learning materials are available on the Internet with which readers can test their knowledge acquisition.

Upstream - Dan Heath 2020-03-03

Wall Street Journal Bestseller New York Times bestselling author Dan Heath explores how to prevent problems before they happen, drawing on insights from hundreds of interviews with unconventional problem solvers. So often in life, we get stuck in a cycle of response. We put out fires. We deal with emergencies. We stay downstream, handling one problem after another, but we never make our way upstream to fix the systems that caused the problems. Cops chase robbers, doctors treat patients with chronic illnesses, and call-center reps address customer complaints. But many crimes, chronic illnesses, and customer complaints are preventable. So why do our efforts skew so heavily toward reaction rather than prevention? *Upstream* probes the psychological forces that push us downstream—including “problem blindness,” which can leave us oblivious to serious problems in our midst. And Heath introduces us to the thinkers who have overcome these obstacles and scored massive victories by switching to an upstream mindset. One online travel website prevented twenty million customer service calls every year by making some simple tweaks to its booking system. A major urban school district cut its dropout rate in half after it figured out that it could predict which students would drop out—as early as the ninth grade. A European nation almost eliminated teenage alcohol and drug abuse by deliberately changing the nation’s culture. And one EMS system accelerated the emergency-response time of its ambulances by using data to predict

where 911 calls would emerge—and forward-deploying its ambulances to stand by in those areas. *Upstream* delivers practical solutions for preventing problems rather than reacting to them. How many problems in our lives and in society are we tolerating simply because we’ve forgotten that we can fix them?

Embodied Politics in Visual Autobiography - Sarah Brophy
2014-11-05

From reality television to film, performance, and video art, autobiography is everywhere in today's image-obsessed age. With

contributions by both artists and scholars, *Embodied Politics in Visual Autobiography* is a unique examination of visual autobiography's involvement in the global cultural politics of health, disability, and the body. This provocative collection looks at images of selfhood and embodiment in a variety of media and with a particular focus on bodily identities and practices that challenge the norm: a pregnant man in cyberspace, a fat activist performance troupe, indigenous artists intervening in museums, transnational selves who connect disability to war, and many more. The chapters in *Embodied Politics in Visual Autobiography* reflect several different theoretical approaches but share a common concern with the ways in which visual culture can generate resistance, critique, and creative interventions. With contributions that investigate digital media, installation art, graphic memoir, performance, film, reality television, photography, and video art, the collection offers a wide-ranging critical account of what is clearly becoming one of the most important issues in contemporary culture.

Nowhere for Very Long - Brianna Madia 2022-04-05

NEW YORK TIMES BESTSELLER • WALL STREET JOURNAL

BESTSELLER • USA TODAY! BESTSELLER In this beautifully written,

vividly detailed memoir, a young woman chronicles her adventures traveling across the deserts of the American West in an orange van named Bertha and reflects on an unconventional approach to life. A woman defined by motion, Brianna Madia bought a beat-up bright orange van, filled it with her two dogs Bucket and Dagwood, and headed into the canyons of Utah with her husband. Nowhere for Very Long is her deeply felt, immaculately told story of exploration—of the world outside and the spirit within. However, pursuing a life of intention isn't always what it seems. In fact, at times it was downright boring, exhausting, and even desperate—when Bertha overheated and she was forced to pull over on a lonely stretch of South Dakota highway; when the weather was bitterly cold and her water jugs froze beneath her as she slept in the parking lot of her office; when she worried about money, her marriage, and the looming question mark of her future. But Brianna was committed to living a life true to herself, come what may, and that made all the difference. Nowhere for Very Long is the true story of a woman learning and unlearning, from backroads to breakdowns, from married to solo, and finally, from lost to found to lost again . . . this time, on purpose. *Glücksprinzip - Unterbewusstsein Programmieren* - Johannes Freitag 2021-08-30

Delta Teacher Development Series: Film in Action - Delta Publishing 2015-03-31

From the multi-award-winning DELTA TEACHER DEVELOPMENT

SERIESFilm in Action convincingly places the moving image at the centre of the 21st century language learning agenda. This groundbreaking book shows how teachers can benefit enormously from the emergence of video distribution sites and the proliferation of mobile devices. The book invites teachers to experiment with film, and provides:

- Insights into how learners can engage with film.
- Over 100 activities for teachers to bring film into the language class.
- Steps for teachers and learners to create their own moving images.

We are living in an age of visual information and Film in Action takes on the challenge of the digital revolution to show teachers the educational benefits of not just watching but also creating moving images. Film in Action contains three distinctive parts, which focus in turn on theory, practice and development: Part A introduces the many different aspects of film: how it can inspire, while exposing learners to a wide range of authentic language, improving comprehension, intercultural understanding and visual literacy. Part B contains over 100 activities – from an exploratory look at film itself – across two chapters which move from responding actively to film to actively producing film. The activities are clearly and simply set out, mixing highly original ideas with reassuringly ‘classical’ procedures. Part C goes beyond the classroom into the wider school environment and into a world dominated by visual information, by looking at innovative ways to integrate moving images through longer, more complex projects.

Mind Shift - John Parrington 2021-04-22

John Parrington argues that social interaction and culture have deeply shaped the exceptional nature of human consciousness. The mental capacities of the human mind far outstrip those of other animals. Our imaginations and creativity have produced art, music, and literature; built bridges and cathedrals; enabled us to probe distant galaxies, and to ponder the meaning of our existence. When our minds become disordered, they can also take us to the depths of despair. What makes the human brain unique, and able to generate such a rich mental life? In this book, John Parrington draws on the latest research on the human brain to show how it differs strikingly from those of other animals in its structure and function at a molecular and cellular level. And he argues

that this 'shift', enlarging the brain, giving it greater flexibility and enabling higher functions such as imagination, was driven by tool use, but especially by the development of one remarkable tool - language. The complex social interaction brought by language opened up the possibility of shared conceptual worlds, enriched with rhythmic sounds, and images that could be drawn on cave walls. This transformation enabled modern humans to leap rapidly beyond all other species, and generated an exceptional human consciousness, a sense of self that arises as a product of our brain biology and the social interactions we experience. Our minds, even those of identical twins, are unique because they are the result of this extraordinarily plastic brain, exquisitely shaped and tuned by the social and cultural environment in which we grew up and to which we continue to respond through life. Linking early work by the Russian psychologist Lev Vygotsky to the findings of modern neuroscience, Parrington explores how language, culture, and society mediate brain function, and what this view of the human mind may bring to our understanding and treatment of mental illness.

The Hand - Frank R. Wilson 2010-10-27

"A startling argument . . . provocative . . . absorbing." --The Boston Globe
"Ambitious . . . arresting . . . celebrates the importance of hands to our lives today as well as to the history of our species." --The New York Times Book Review
The human hand is a miracle of biomechanics, one of the most remarkable adaptations in the history of evolution. The hands of a concert pianist can elicit glorious sound and stir emotion; those of a surgeon can perform the most delicate operations; those of a rock climber allow him to scale a vertical mountain wall. Neurologist Frank R. Wilson makes the striking claim that it is because of the unique structure of the hand and its evolution in cooperation with the brain that Homo sapiens became the most intelligent, preeminent animal on the earth. In this fascinating book, Wilson moves from a discussion of the hand's evolution--and how its intimate communication with the brain affects such areas as neurology, psychology, and linguistics--to provocative new ideas about human creativity and how best to nurture it. Like Oliver Sacks and Stephen Jay Gould, Wilson handles a daunting range of

scientific knowledge with a surprising deftness and a profound curiosity about human possibility. Provocative, illuminating, and delightful to read, *The Hand* encourages us to think in new ways about one of our most taken-for-granted assets. "A mark of the book's excellence [is that] it makes the reader aware of the wonder in trivial, everyday acts, and reveals the complexity behind the simplest manipulation." --The Washington Post

The Spike - Mark Humphries 2023-01-24

The story of a neural impulse and what it reveals about how our brains work We see the last cookie in the box and think, can I take that? We reach a hand out. In the 2.1 seconds that this impulse travels through our brain, billions of neurons communicate with one another, sending blips of voltage through our sensory and motor regions. Neuroscientists call these blips "spikes." Spikes enable us to do everything: talk, eat, run, see, plan, and decide. In *The Spike*, Mark Humphries takes readers on the epic journey of a spike through a single, brief reaction. In vivid language, Humphries tells the story of what happens in our brain, what we know about spikes, and what we still have left to understand about them. Drawing on decades of research in neuroscience, Humphries explores how spikes are born, how they are transmitted, and how they lead us to action. He dives into previously unanswered mysteries: Why are most neurons silent? What causes neurons to fire spikes spontaneously, without input from other neurons or the outside world? Why do most spikes fail to reach any destination? Humphries presents a new vision of the brain, one where fundamental computations are carried out by spontaneous spikes that predict what will happen in the world, helping us to perceive, decide, and react quickly enough for our survival. Traversing neuroscience's expansive terrain, *The Spike* follows a single electrical response to illuminate how our extraordinary brains work.
