This book identifies the strategic changes that affected Britain from 1750-1850.

The Great Paleolithic War - David J. Meltzer 2015-11-03

Only a few years after the discovery in Europe in the late 1850s that humanity had roots predating history and the Biblical chronicles, and reaching deep into the Pleistocene, came the suggestion that North American prehistory might be just as old. And why not? There seemed to be an exact synchronism [of geological strata] between Europe and America," and so by extension there ought to be a parallelism as to the antiquity of man." That triggered an eager search for traces of the people who may have occupied North America in the recesses of the Ice Age. The Great Paleolithic War is the history of the longstanding and bitter dispute in North America over whether people had arrived here in Ice Age times.

Lone Survivors - Chris Stringer 2012-03-13

A leading researcher on human evolution proposes a new and controversial theory of how our species came to be In this groundbreaking and engaging work of science, world-renowned paleoanthropologist Chris Stringer sets out a new theory of humanity's origin, challenging both the multiregionalists (who hold that modern humans developed from ancient ancestors in different parts of the world) and his own "out of Africa" theory, which maintains that humans emerged rapidly in one small part of Africa and then spread to replace all other humans within and outside the continent. Stringer's new theory, based on archeological and genetic evidence, holds that distinct humans coexisted and competed across the African continent—exchanging genes, tools, and behavioral strategies. Stringer draws on analyses of old and new fossils from around the world, DNA studies of Neanderthals (using the full genome map) and other species, and recent archeological digs to unveil his new theory. He shows how the most sensational recent fossil findings fit with his model, and he questions previous concepts (including his own) of modernity and how it evolved. Lone Survivors will be the definitive account of who and what we were, and will change perceptions about our origins and about what it means to be human.

Human Paleoeology in the Levantine Corridor - N. Goren-Inbar 2004

Few areas of the world have played as prominent a role in human evolution as the Levantine Corridor, a comparatively narrow strip of land sandwiched between the Mediterranean Sea on the west and the expanse of inhospitable desert to the east. The first hominids to leave Africa, over 1.5 million years ago, first entered the Levant before spreading into what is now Europe and Asia. About 100,000 years ago another African exodus, this time of anatomically modern humans, colonised the Levant before expanding into Eurasia. Toward the end of the Pleistocene, this Corridor also witnessed some of the earliest steps toward economic and social intensification, perhaps the most radical change in hominid lifestyle that ultimately paved the way for sedentary communities wholly dependent on domestic animals and cultivated plants.

An introduction to the human heart, blood, blood vessels, and various types of blood cells.

Mechanical Behavior of Materials - Thomas H. Courtney 2005-12-16

This outstanding text offers a comprehensive treatment of the principles of the mechanical behavior of materials. Appropriate for senior and graduate courses, it is distinguished by its focus on the relationship between macroscopic properties, material microstructure, and fundamental concepts of bonding and crystal structure. The current, second edition retains the original editions extensive coverage of nonmetallics while increasing coverage of ceramics, composites, and polymers that have emerged as structural materials in their own right and are now competitive with metals in many applications. It contains new case studies, includes solved example problems, and incorporates real-life examples. Because of the books extraordinary breadth and depth, adequate coverage of all of the material requires two full semesters of a typical three-credit course. Since most curricula do not have the luxury of allocating this amount of time to mechanical behavior of materials, the text has been designed so that material can be culled or

deleted with ease. Instructors can select topics they wish to emphasize and are able to proceed at any level they consider appropriate.

Paleolithic Politics - Barry Cooper 2020-04-30

Using his background in political theory and philosophical anthropology, Barry Cooper is the first political scientist to propose new interpretations of some of the most famous extant Paleolithic art and artifacts in Paleolithic Politics. This book is inspired by Eric Voegelin, one of the major political scientists of the last century, who developed an interest in the very early symbolism associated with the caves and rock shelters of the Upper Paleolithic, but never finished his analysis. Cooper, who has written extensively on Voegelin's theories, takes up the enterprise of applying Voegelin's approach to an analysis of portable and cave art. He specifically applies Voegelin's philosophy of consciousness, his concept of the compactness and differentiation of consciousness, his argument regarding the experience and symbolizations of reality, and his notion of the primary experience of the cosmos to images previously regarded as pedestrian. Cooper demonstrates the political significance of the earliest expressions of human existence and is among the first to argue that political life began not with the Greeks, but 25,000 years before them. Archaeologists, prehistorians, and political scientists will all benefit from this original and provocative work.

The Last Lost World - Lydia Pyne 2013-04-30

An enthralling scientific and cultural exploration of the Ice Age—from the author of *How the Canyon Became Grand* From a remarkable father-daughter team comes a dramatic synthesis of science and environmental history—an exploration of the geologic time scale and evolution twinned with the story of how, eventually, we have come to understand our own past. The Pleistocene is the epoch of geologic time closest to our own. *The Last Lost World* is an inquiry into the conditions that made it, the themes that define it, and the creature that emerged dominant from it. At the same time, it tells the story of how we came to discover and understand this crucial period in the Earth's history and what meanings it has for today.

Points in Time - Paul Bowles 2006-10-31

In this intense and brilliant book Bowles focuses on Morocco, condensing experience, emotion, and the whole history of a people into a series of short, insightful vignettes. He distills for us the very essence of Moroccan culture. With extraordinary immediacy, he takes the reader on a journey through the Moroccan centuries, pausing at points along the way to create resonant images of the country, its landscapes, and the beliefs and characteristics of its inhabitants.

Ethics - Jacques P. Thiroux 2009

With a clear presentation, *Ethics: Theory and Practice* educates readers about ethical theory and has them apply what they learn to specific classic and contemporary moral problems (lying, cheating, establishing ethical business practices, honoring ethical obligations in medicine, etc.). Jacques P. Thiroux first wrote this text 1977 in order to educate readers about ethical theory and its applications in a way that beginning students could understand. The result was an accessible text that isn't too technical and doesn't plunge into complex readings without sufficient background. The text is fully updated with global issues and non-Western ethical views. Keith W. Krasemann now continues Thiroux's efforts of making Ethical Ideas accessible to students. Besides updating the foundations of the text, Krasemann incorporates new and relevant material, most of which is often unique only to this text.

Enlace Con El Hogar - 2004-10

Estudiante de Salamanca - José de Espronceda 1991

In this impressive 'verse legend' Espronceda creates an original interpretation of the famous Don Juan legend whereby he produces a Romantic 'counter-text' which gives voice to what we now recognise as a central part of the modern philosophical condition: the Romantic vision of an all-pervasive cosmic injustice. Professor Cardwell, in his introduction, shows how in the person of Felix de Montemar, Espronceda has created one of Europe's first rebellious literary heroes, standing alone, noble and defiant, in the face of all the evil and pain in the world. Thus Espronceda takes his place alongside other major European Romantic writers; Byron, Lermontov, Heine, Vigny, Leopardi and Mickiewicz; expressing, as they do, man's existential protest, noblest ideals and his modern sense of human condition which directly informs our own twentieth century literary achievements. Davies' meticulous translation of this poem, mirroring the metrical and stylistic virtuosity of Espronceda's original, presents it for the first time to English readers, since its composition 150 years ago.

Personal Ornaments in Prehistory - Emma L. Baysal 2019-08-29

Beads, bracelets, necklaces, pendants and many other ornaments are familiar objects that play a fundamental role in personal expression and communication. This book considers how and why the human relationship with ornaments developed and continued over tens of thousands of years, from hunter-gatherer life in the cave to urban elites, from expedient use of natural resources to complex technologies. Using evidence from archaeological sites across Turkey, the Near East and the Balkans, it explores the history of personal ornaments from their appearance in the Palaeolithic until the rise of urban centers in the Early Bronze Age and encompassing technologies ranging from stone cutting to early glazing, metallurgy and the roots of glass manufacture. The development of theoretical and practical approaches to ornaments and the current state of research are illustrated with a wide variety of

examples. This book shows that far from being objects of display, of little value in archaeological interpretation and often overlooked, these artifacts are key to understanding trade, relationships, values, beliefs and the construction of personal identity in the past. Indeed, more than any other group of artifacts, their variety in material, form, use and distribution opens doors to both wide ranging scientific exploration and consideration of what it is to be human.

Qualitative Studies in Education (1995) - Jane Salisbury 2018-02-06

Published in 1995, this book comprises a group of original studies in education. It includes detailed empirically-based accounts of a variety of educational settings which are under represented in the sociological literature, for instance special schools, psychiatric adolescent units, further education colleges and government policy settings. Studies of other neglected issues include teachers' understandings of subject, the promotion of cross curricular themes and pupils' acquisition of knowledge about menstruation. Ethnographic fieldwork in Maltese classrooms and a study of Asian pupils in a Welsh school provide an international dimension to the volume. Most contributions draw on ethnographic approaches and by using close observation and / or in-depth interviews they capture the internal workings of a classroom, institution or culture.

Frozen Earth - Doug Macdougall 2013-02-15

In this engrossing and accessible book, Doug Macdougall explores the causes and effects of ice ages that have gripped our planet throughout its history, from the earliest known glaciation—nearly three billion years ago—to the present. Following the development of scientific ideas about these dramatic events, Macdougall traces the lives of many of the brilliant and intriguing characters who have contributed to the evolving understanding of how ice ages come about. As it explains how the great Pleistocene Ice Age has shaped the earth's landscape and influenced the course of human evolution, *Frozen Earth* also provides a fascinating look at how science is done, how the excitement of discovery drives scientists to explore and investigate, and how timing and chance play a part in the acceptance of new scientific ideas. Macdougall describes the awesome power of cataclysmic floods that marked the melting of the glaciers of the Pleistocene Ice Age. He probes the chilling evidence for "Snowball Earth," an episode far back in the earth's past that may have seen our planet encased in ice from pole to pole. He discusses the accumulating evidence from deep-sea sediment cores, as well as ice cores from Greenland and the Antarctic, that suggests fast-changing ice age climates may have directly impacted the evolution of our species and the

course of human migration and civilization. *Frozen Earth* also chronicles how the concept of the ice age has gripped the imagination of scientists for almost two centuries. It offers an absorbing consideration of how current studies of Pleistocene climate may help us understand earth's future climate changes, including the question of when the next glacial interval will occur.

The Adventures of Tom Sawyer AND The Adventures of Huckleberry Finn (Unabridged. Complete with All Original Illustrations) - Mark Twain 2020-03-25

Tom Sawyer is an intelligent resourceful orphan who enjoys a life of freedom that is unsheltered from life's hardships. He is an immediately attractive character who draws the reader through his adventures. Huck Finn is more superstitious and naïve, but still an adventurous survivor. Together they engage with their world in this classic coming of age story. What makes these two books classics? Twain's characters are surprising, unforgettable and truly human. The dialog faithfully reproduces the common speech of his day. Twain explains, "In this book a number of dialects are used, to wit: the Missouri negro dialect; the extremest form of the backwoods Southwestern dialect; the ordinary 'Pike County' dialect; and four modified varieties of this last. The shadings have not been done in a haphazard fashion, or by guesswork; but painstakingly, and with the trustworthy guidance and support of personal familiarity with these several forms of speech." The plot combines adventure, suspense and mischief with the darker side of humanity: murder, deceit, brutality and racial prejudice. Twain's trademark humor and observations of human nature are never far. Hemingway concludes "All modern American literature comes from one book by Mark Twain called *Huckleberry Finn* . . . It is the best book we have." Features of this edition: Complete and unabridged Includes 335 original illustrations Crisp text set in modern easily read font.
