Drug Wars - Robin Feldman 2017-06-09

While the shockingly high prices of prescription drugs continue to dominate the news, the strategies used by pharmaceutical companies to prevent generic competition are poorly understood, even by the lawmakers responsible for regulating them. In this groundbreaking work, Robin Feldman and Evan Frondorf illuminate the inner workings of the pharmaceutical market and show how drug companies twist health policy to achieve goals contrary to the public interest. In highly engaging prose, they offer specific examples of how generic competition has been stifled for years, with costs climbing into the billions and everyday consumers paying the price. **Drug Wars** is a guide to the current landscape, a roadmap for reform, and a warning of what is to come. It should be read by policymakers, academics, patients, and anyone else concerned with the soaring costs of prescription drugs.

His crusade leads Lenzer on a journey through the dark underbelly of the medical device industry, a fascinating and disturbing world that hasn't been written about before. harm to us, to our communities, and to the planet. But if it is so bad for us, why is it ubiquitous? In *Useful Delusions*, Shankar Vedantam and Bill Mesler argue that, paradoxically, self-deception can also play a vital role in our success and well-being. The lies we tell ourselves sustain our daily interactions with friends, lovers, and coworkers. They can explain why some people live longer than others, why some couples remain in love and others don't, why some nations hold together while others splinter. Filled with powerful personal stories and drawing on new insights in psychology, neuroscience, and philosophy, *Useful Delusions* offers a fascinating tour of what it really means to be human.

China Rx - Rosemary Gibson 2018

Millions of Americans are taking prescription drugs made in China and don't know it-- and pharmaceutical companies are not eager to tell them. This probing book examines the implications for the quality and availability of vital medicines for consumers. Several decades ago, penicillin, vitamin C, and many other prescription and over-the-counter products were manufactured in the United States. But with the rise of globalization, antibiotics, antidepressants, birth control pills, blood pressure medicines, cancer drugs, among many others are made in China and sold in the United States. China's biggest impact on the US drug supply is making essential ingredients for thousands of medicines found in American homes and used in hospital intensive care units and operating rooms. The authors convincingly argue that there are at least two major problems with this scenario.

bottle-of-lies-the-inside-story-of-the-generic-drug

First, it is inherently risky for the United States to become dependent on any one country as a source for vital medicines, especially given the uncertainties of geopolitics. For example, if an altercation in the South China Sea causes military personnel to be wounded, doctors may rely upon medicines with essential ingredients made by the adversary. Second, lapses in safety standards and quality control in Chinese manufacturing are a risk. Citing the concerns of FDA officials and insiders within the pharmaceutical industry, the authors document incidents of illness and death caused by contaminated medications that prompted reform. This is a disturbing, well-researched book and a wake-up call for improving the current system of drug supply and manufacturing.

Damage Procrit seemed like a biotech miracle, promising a golden age in medical care. Developed in the 1980s by Amgen and licensed to the pharmaceutical giant, Johnson & Johnson, the drug (AKA Epogen and Aranesp) soon generated billions in annual revenue—and still does. In 2012, world famous cyclist, Olympian, and Tour de France champion Lance Armstrong was banned from professional cycling on doping charges for using EPO (the blanket name for the drugs Procrit and Epogen), resulting in a global controversy about abuse, big pharmaceutical companies, and the lies and inaccuracies concerning performance-enhancing drugs. Mark Duxbury was a J&J salesman who once believed in the blood-booster, setting record sales and winning company awards. Then Duxbury started to learn unsavory truths about Procrit and J&J's business practices. He was fired and filed a whistleblower suit to warn the public. When Jan Schlichtman (A Civil Action) learned of Duxbury's crusade, he signed on. Now, he's

Generic - Jeremy A. Greene 2016-09-01

Greene's history sheds light on the controversies shadowing the success of generics: problems with the generalizability of medical knowledge, the fragile role of science in public policy, and the increasing role of industry, marketing, and consumer logics in late-twentieth-century and early twenty-first century health care.

Cycle of Lies - Juliet Macur 2014-03-04

In June 2013, when Lance Armstrong fled his palatial home in Texas, downsizing in the face of multimillion-dollar lawsuits, Juliet Macur was there—talking to his girlfriend and children and listening to Armstrong's version of the truth. the center of *Cycle of Lies* is Armstrong himself, revealed through face-to-face interviews. But this unfolding narrative is given depth and breadth by the firsthand accounts of more than one hundred witnesses, including family members whom Armstrong had long since turned his back on—the adoptive father who gave him the Armstrong name, a grandmother, an aunt. Perhaps most damning of all is the taped testimony of the late J.T. Neal, the most influential of Armstrong's many father figures, recorded in the final years of Neal's life as he lost his battle with cancer just as Armstrong gained fame for surviving the disease. In the end, it was Armstrong's former friends, those who had once occupied the precious space of his inner circle, who betrayed him. They were the ones who dealt Armstrong his fatal blow by breaking the code of silence that shielded the public from the grim truth about the sport of cycling—and the grim truth about its golden boy, Armstrong. Threading together the vivid and

bottle-of-lies-the-inside-story-of-the-generic-drug

disparate voices of those with intimate knowledge of the private and public Armstrong, Macur weaves a comprehensive and unforgettably rich tapestry of one man's astonishing rise to global fame and fortune and his devastating fall from grace.

The Fix. One of Johann Hari's earliest memories is of trying to wake up one of his relatives and not being able to. As he grew older, he realized he had addiction in his family. Confused, not knowing what to do, he set out and traveled over 30,000 miles over three years to discover what really causes addiction--and what really solves it. He uncovered a range of remarkable human stories--of how the war on drugs began with Billie Holiday, the great jazz singer, being stalked and killed by a racist policeman; of the scientist who discovered the surprising key to addiction; and of the countries that ended their own war on drugs--with extraordinary results. *Chasing the Scream* is the story of a life-changing journey that transformed the addiction debate internationally--and showed the world that the opposite of addiction is connection.

Times. In this fascinating New York Times bestseller, the author of *The Best and the Brightest*, *The Fifties*, and other acclaimed histories turns his investigative eye to the rise of the American media in the twentieth century. Focusing on the successes and failures of CBS Television, Time magazine, the Washington Post, and the Los Angeles Times, David Halberstam paints a portrait of the era when large, powerful mainstream media sources emerged as a force, showing how they shifted from simply reporting the news to becoming a part of it. By examining landmark events such as Franklin D. Roosevelt's masterful use of the radio and the unprecedented coverage of the Watergate break-in, Halberstam demonstrates how print and broadcast media as a whole became a player in society and helped shape public policy. Drawn from hundreds of exhaustive interviews with insiders at each company, and hailed by the Seattle Times as "a monumental X-ray study of power," *The Powers That Be* reveals the tugs-of-

Kill Shot - Jason Dearen 2022-02-22

Now in paperback. An award-winning investigative journalist's horrifying true crime story of America's deadliest drug contamination outbreak and the greed and deception that fueled it. Two pharmacists sit in a Boston courtroom accused of murder. The weapon: the fungus *Exserohilum rostratum*. The death count: 100 and rising. *Kill Shot* is the story of their hubris and fraud, discovered by a team of medical detectives who raced against the clock to hunt the killers and the fungal meningitis they'd unleashed. "Bloodthirsty" is how doctors described the fungal microbe that contaminated thousands of drug vials produced by the New England Compounding Center (NECC). Though NECC chief Barry Cadden called his company the "Ferrari of Compounders," it was a slapdash operation of unqualified staff, mold-ridden lab

Once inside some of its human hosts, the fungus traveled through the tough tissue around the spine and wormed upward to the "deep brain," our control center for balance, breath, and the vital motor functions of life. Now, investigative journalist Jason Dearen turns a spotlight on this tragedy--the victims, the heroes, and the perpetrators--and the legal loopholes that allowed it to occur. *Kill Shot* forces a powerful but unchecked industry out of the shadows.

Jungle for pharmaceuticals Many have hailed the widespread use of generic drugs as one of the most important public-health developments of the twenty-first century. Today, almost 90 percent of our pharmaceutical market is comprised of generics, the majority of which are manufactured overseas. We have been reassured by our doctors, our pharmacists and our regulators that generic drugs are identical to their brand-name counterparts, just less expensive. But is this really true? Katherine Eban's *Bottle of Lies* exposes the deceit behind generic-drug manufacturing—and the attendant risks for global health. Drawing on exclusive accounts from whistleblowers and regulators, as well as thousands of pages of confidential FDA documents, Eban reveals an industry where fraud is rampant, companies routinely falsify data, and executives circumvent almost every principle of safe manufacturing to minimize cost and maximize profit, confident in their ability to fool inspectors. Meanwhile, patients unwittingly

consume medicine with unpredictable and dangerous effects. The story of generic drugs is truly global. It connects middle America to China, India, sub-Saharan Africa and Brazil, and represents the ultimate litmus test of globalization: what are the risks of moving drug manufacturing offshore, and are they worth the savings? A decade-long investigation with international sweep, high-stakes brinkmanship and big money at its core, *Bottle of Lies* reveals how the world's greatest public-health innovation has become one of its most astonishing swindles.

in the world. At the heart of the problem is Big Pharma, which funds most clinical trials and therefore controls the research agenda, withholds the real data from those trials as corporate secrets, and shapes most of the information relied upon by health care professionals. In this no-holds-barred exposé, Dr. John Abramson—one of the foremost experts on the drug industry’s deceptive tactics—combines patient stories with what he learned during many years of serving as an expert in national drug litigation to reveal the tangled web of financial interests at the heart of the dysfunction in our health-care system. For example, one of pharma’s best-kept secrets is that the peer reviewers charged with ensuring the accuracy and completeness of the clinical trial reports published in medical journals do not even have access to complete data and must rely on manufacturer-influenced summaries. Likewise for the experts who write the clinical practice guidelines that define our standards of care. The

discovered opium, alcohol, snakeroot, juniper, frankincense, and other helpful substances. Ötzi the Iceman, the five-thousand-year-old hunter frozen in the Italian Alps, was found to have whipworms in his intestines and Bronze-age medicine, a worm-killing birch fungus, knotted to his leggings. Nowadays, Big Pharma conglomerates spend billions of dollars on state-of-the-art laboratories staffed by PhDs to discover blockbuster drugs. Yet, despite our best efforts to engineer cures, luck, trial-and-error, risk, and ingenuity are still fundamental to medical discovery. *The Drug Hunters* is a colorful, fact-filled narrative history of the search for new medicines from our Neolithic forebears to the professionals of today, and from quinine and aspirin to Viagra, Prozac, and Lipitor. The chapters offer a lively tour of how new drugs are actually found, the discovery strategies, the mistakes, and the rare successes. Dr. Donald R. Kirsch infuses the book with his own expertise and experiences from thirty-five

seeking his father's last surviving painting.
Suddenly the winds of fortune begin to shift,

Nicholas and Isabel, it seems, were always
meant to meet. But it will take a series of chance

events--and perhaps, a proper miracle--to
convince both to follow their hearts to where
they're meant to be.
