Controlling Hazardous Energy Sources (Lockout/Tagout) - National Aeronautics and Space Administration (NASA) 2018-08-16

The minimum requirements as established by the Occupational Safety and Health Administration (OSHA) standard 29 CFR 1910.147 are discussed for preventing the unexpected operation of equipment or release of

energy which could cause injury to personnel, damage to equipment, harm to the environment, or loss or compromise of test data. Safety requirements both for government and contractor personnel are explained for potentially hazardous energy sources during work operations at LeRC (Cleveland and Plum Brook Stations). Basic rules are presented to ensure protection against harmful exposures, and baseline implementation requirements are discussed from which detailed lockout/tagout procedures can be developed for individual equipment items. Examples of energy sources covered by this document include electrical, pneumatic, mechanical, chemical, cryogenic, thermal, spring tension/compression suspended or moving loads, and other potentially hazardous sources. Activities covered by this standard include, but are not limited to, construction, maintenance, installation, calibration, inspection, cleaning, or repair. Dominguez, Manuel B. Security in the Bubble - Christine Hentschel 2015-08-08

Focusing on the South African city of Durban, Security in the Bubble looks at spatialized security practices, engaging with strategies and dilemmas of urban security governance in cities around the world. While apartheid was spatial governance at its most brutal, postapartheid

South African cities have tried to reinvent space, using it as a “positive” technique of governance. Christine Hentschel traces the contours of two emerging urban regimes of governing security in contemporary Durban: handsome space and instant space. Handsome space is about aesthetic and affective communication as means to making places safe. Instant space, on the other hand, addresses the crime-related personal “navigation” systems employed by urban residents whenever they circulate through the city. While handsome space embraces the powers of attraction, instant space operates through the powers of fleeing. In both regimes, security is conceived not as a public good but as a situational experience that can. No longer reducible to the after-pains of racial apartheid, this city’s fragmentation is now better conceptualized, according to Hentschel, as a heterogeneous ensemble of bubbles of imagined safety.
