The Science of Brass Instruments - Murray Campbell 2021-01-19

This book provides an in-depth account of the fascinating but far from simple actions and processes that take place when a brass instrument is played. Written by three leading researchers in brass instrument acoustics who are also experienced brass players, it draws together the many recent advances in our understanding of the subtly interrelated factors shaping the musician's control of the instrument's sound. The reader is introduced to models of sound generation, propagation and radiation. In particular, the current understanding of the behaviour of the player's lips, the modes of vibration of the air column inside the instrument, and the radiation of sound from a brass instrument bell are explained. The functions of the mouthpiece and of mutes are discussed. Spectral enrichment arising from nonlinear propagation of the internal sound wave in loud playing is shown to be an important influence on the

timbre of many types of brass instrument. The characteristics of brass instruments in contemporary use (including cornets, trumpets, french horns, trombones and tubas) are identified, and related to those of the great variety of instruments at earlier stages in the evolution of the brass family. This copiously illustrated book concludes with case studies of the recreation of ancient instruments and some of the current applications of electronics and information technology to brass instrument performance. While most of the material presented is accessible by a general readership, the topic of musical instrument modelling is developed at a mathematical level which makes it a useful academic resource for advanced teaching and research. Written by three internationally acknowledged experts in the acoustics and organology of brass instruments who are also experienced brass instrument players. Provides both an accessible introduction to brass instrument science and a review of recent research results and mathematical modeling techniques. Represents the first monograph on the science underlying the design and performance of musical instruments of the brass family

The Art of Trumpet Teaching - Leigh Anne Hunsaker 2022-06-14

Keith Johnson retired in 2014 from the University of North Texas, where

he was Regents Professor of Trumpet and was honored with the Distinguished Teaching Professor award. Acclaimed for his pedagogy, Johnson wrote more than thirty articles, two pedagogical texts, and two method books. During his career, he presented masterclasses at universities and conservatories throughout the United States, as well as in Europe, Canada, Mexico, Brazil, and South Africa. Johnson's former students hold positions in universities, orchestras, and military ensembles in over a dozen countries. He would modestly say, "I just pick the right people and they make me look good," but his students tell a different story. In *The Art of Trumpet Teaching*, Johnson's former students from his early years at the University of Northern Iowa to his last student after retirement from the University of North Texas describe his teaching approach and tireless work to help each person succeed. These stories also highlight the warm and humorous side of his nature and provide an insight into what Johnson called "the art of teaching." Along with Johnson's biography and studio stories, Leigh Anne Hunsaker presents an extensive collection of pedagogical concepts from Johnson's six decades of teaching. Also included are some of his later expositions on the value of music in education, motivation, and the idea of "music as metaphor." Johnson's hallmark pedagogical tenets, along with much practical advice given to his UNT students, provide a teaching and reference handbook for a new generation of teachers and players.

[Technical Studies for the Cornet](#) - Herbert L. Clarke

There are many books written for the Piano, Violin, etc., entirely devoted to Technic. This Work is especially written to enable the Student, by practice and application, to overcome any obstacle which may occur in musical passages written for the Cornet. By controlling the Wind Power to play these Exercises as written, in one breath, the Student will acquire ENDURANCE without strain or injury. Train the Muscles which control the Lips, to make them elastic and strong, as only a slight pressure is necessary, and not brute force. The highest as well as the lowest notes can be played with equal tone quality if practiced according to the

instructions that precede each Study. Every Cornet Player should have reached a degree of excellence before attempting to play these Exercises. To become an Expert on the Cornet, one should be familiar with as many Cornet Methods as possible, and so gain the experience of each. Every Exercise in this Book is possible, and not so very difficult if practiced slowly at first, and not too long at a time. I have used them for my daily practice for years, and they have been the means of my reaching the highest notes after playing a two-hour Concert, also of preserving my lips so that they never tire, and what has been a help to me is surely good for other Cornet Players. You cannot expect to attain the highest point of excellence without hard work and perseverance.

Never be perfectly satisfied with yourself. Try to make some improvement each day, feeling that it is a pleasure to have conquered that which seemed an impossibility at first. Do not neglect to correct immediately the least fault you make. Bad habits are easily formed, but are difficult to remedy. There are few Celebrated Cornet Soloists, although thousands play the instrument. Most players abuse their practicing by not knowing the proper way, and neglecting to pay more attention to the elementary work. These Studies have been found to be excellent for Clarinet Players as well as Cornet Players. The Clarinet being a Wind Instrument also, all these Exercises will appeal to the Player of that Instrument by following the same instructions.

Edwards-Hovey Method for Cornet or Trumpet, Book 1 - Austyn R. Edwards 1999-10-18

The aim of the Edwards-Hovey Method for cornet or trumpet is to develop a method in which the material is arranged logically from the standpoint of (a) Rhythmic development, (b) gradual extension of the range, and (c) development of finger dexterity. Melodies have been selected which adapt themselves easily to correct phrasing, and exercises, while in keeping with limited range and technical ability of the beginning pupil, have been made as melodious as possible, avoiding monotonous and constant repetition of rhythmic patterns.
