Leonardo Pisano (Fibonacci) - L. E. Sigler 2014-06-28

The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

People of the Eland - Patricia Vinnicombe 2009

First published in 1976, *People of the Eland* was the first major step away from the outsiders view upon San rock art that had dominated studies of rock art for nearly a century. The book provides an account of the rock art of the Drakensberg Range and historical information on the mountain San themselves. The book aims to gain an insiders view of the rock art using San understandings of the world. While following this approach, it quickly became clear to Patricia Vinnicombe that the art was very far from simple depictions of daily life as had once seemed likely, but instead reflected the most deeply held San beliefs and symbols. This approach and this understanding has now become the standard for all those working with San rock art. Whilst this early knowledge of San art

has been built upon considerably since 1976, *People of the Eland* remains a cornerstone of our current understanding. Reprinted here in full color, with the original artwork and photographs, *People of the Eland* remains a seminal work, the impact of which cannot be underestimated.

Martin Luther: 'n Inleiding tot sy lewe, denke en geskrifte -

Ignatius W.C. (Natie) van Wyk 2019-12-12

In 2017 the world celebrated the 500 years of the Reformation of the 16th century. Martin Luther was at the centre of this jubilee. He is the father of the Protestant Church. A large section of the Afrikaans-speaking community in southern Africa (and those scattered all over the world) belong to one of the Protestant churches. There is not a single academic introduction on Luther in Afrikaans. This publication will be the first in Afrikaans on Luther. The purpose is also to introduce the well-known and unknown writings of Luther to students and lecturers. Most readers will for the first time be able to read passages from his letters, sermons and commentaries. This book will hopefully be the beginning of a southern African Luther-reception. This will be a major contribution to the South African scholarship on church history. It will be the first publication that offers biographical information as well as information on and translations of his writings. Luther has until now, not spoke Afrikaans. The book is written from a southern African perspective. The author is looking for answers on African problems and challenges from Luther. Many of Luther's writings are relevant to our situation. He (as one example) urged the authorities and parents to ensure education for all children. In this country thousands of children are not in school, or do not complete their schooling education. Although we are centuries apart, we could still learn from Luther in this regard. Specialists in church history and systematic theology, as well as ministers and students. Hopefully this book will become prescribed literature at faculties of theology and seminars. The universal-accepted methodologies in the

writing of church history are followed. One of the unique features of this book is the translations into Afrikaans of all quotations from Medieval German and Latin. This has never been done previously.

Farthest North - Fridtjof Nansen 1898

In September of 1893, Norwegian zoologist Fridtjof Nansen and a crew manned the schooner *Fram*, intending to drift, frozen in the Arctic pack-ice, to the North Pole. When it became clear that they would miss the pole, Nansen and his companion Hjalmar Johansen struck off by themselves. Racing the shrinking pack-ice, they attempted, by dog-sled, to go "farthest north." They survived a winter in a moss hut eating walrus and polar bears, and the public assumed they were dead. In the spring of 1896, after three years of trekking, and having made it to within four degrees of the pole, they returned to safety. Nansen's narrative stands with the best writing on polar exploration.

Examining the Phenomenon of "Teaching Out-of-field" - Linda Hobbs 2019-01-01

This book identifies and surveys the major themes around 'out-of-field teaching', that is, teaching subjects or year levels without a specialization. This has been an issue in many countries for some time, yet until recently there has been little formal research and poor policy responses to related problems. This book arises out of collaborations between members of an international group of researchers and practitioners from Australia, Germany, Ireland, England, South Africa, Indonesia and the United States. Cross-national comparisons of ideas through case studies, descriptions of practice and research data interrogates the experiences, practices, and contexts relating to out-of-field teaching. In particular, the book considers the phenomenon of out-of-field teaching in relation to national policy contexts, local school leadership practices, professional development. The book represents an essential contribution on a highly topical issue that has implications for quality and equitable education around the globe.
