Prepared - Diane Tavenner 2019-09-17

A blueprint for how parents can stop worrying about their children's future and start helping them prepare for it, from the cofounder and CEO of one of America's most innovative public-school networks "A treasure trove of deeply practical wisdom that accords with everything I know about how children thrive."—Angela Duckworth, New York Times bestselling author of *Grit* In 2003, Diane Tavenner cofounded the first school in what would become Summit Public Schools, which has since won national recognition for its exceptional outcomes: 99 percent of students are accepted to a four-year college, and its students graduate college at twice the national average. But in a radical departure from the environments created by the college admissions arms race, Summit students aren't focused on competing with their classmates for rankings or test scores. Instead, students spend their days solving real-world problems and developing the skills of self-direction, collaboration, and reflection, all of which prepare them to succeed in college, thrive in today's workplace, and lead a secure and fulfilled life. Through personal stories and hard-earned lessons from Summit's exceptional team of educators and diverse students, Tavenner shares the learning philosophies underlying the Summit model and offers a blueprint for any

parent who wants to stop worrying about their children's future—and start helping them prepare for it. At a time when many students are struggling to regain educational and developmental ground lost to the disruptions of the pandemic, Prepared is more urgent and necessary than ever.

How People Learn - National Research Council 2000-08-11

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

How to Raise an Adult - Julie Lythcott-Haims 2015-06-09

New York Times Bestseller "Julie Lythcott-Haims is a national treasure. . . . A must-read for every parent who senses that there is a healthier and saner way to raise our children." -Madeline Levine, author of the New York Times bestsellers *The Price of Privilege* and *Teach Your Children Well* "For parents who want to foster hearty self-reliance instead of hollow self-esteem, *How to Raise an Adult* is the right book at the right time." -Daniel H. Pink, author of the New York Times bestsellers *Drive* and *A Whole New Mind* A provocative manifesto that exposes the harms of helicopter parenting and sets forth an alternate philosophy for raising preteens and teens to self-sufficient young adulthood In *How to Raise an Adult*, Julie Lythcott-Haims draws on research, on conversations with admissions officers, educators, and employers, and on her own insights as a mother and as a student dean to highlight the ways in which overparenting harms children, their stressed-out parents, and society at large. While empathizing with the parental hopes and, especially, fears that lead to overhelping, Lythcott-Haims offers practical alternative strategies that underline the importance of allowing children to make their own mistakes and develop the resilience, resourcefulness, and

inner determination necessary for success. Relevant to parents of toddlers as well as of twentysomethings-and of special value to parents of teens-this book is a rallying cry for those who wish to ensure that the next generation can take charge of their own lives with competence and confidence.

The Scaffold Effect - Harold Koplewicz 2021-02-04

'A master synthesizer of attachment science, medical practice, and his own experience as a father, Harold Koplewicz capably and compassionately leads us through the art of scaffolding, from early childhood through the important adolescent period.' - Daniel J. Siegel, MD, author of *The Whole Brain Child* Prevent and counteract the general anxiety and emotional fragility prevalent in children and teenagers today - a new parenting philosophy and strategies that give children the tools to flourish on their own. Just as sturdy scaffolding is necessary when erecting a building and will come down when the structure grows stable, good parenting provides children with steady and warm emotional nourishment on the path toward independence. Never-ending parental problem-solving and involvement can have the opposite effect, enabling fragility and anxiety over time. In *The Scaffold Effect*, world-renowned child psychiatrist Harold Koplewicz introduces the powerful and clinically tested idea that this deliberate build-up and then gradual loosening of parental support is the single most effective way to encourage kids to climb higher, try new things, grow from mistakes and develop character and strength. Explaining the building blocks of an effective scaffold from infancy through young adulthood, he expertly guides parents through the strategies for raising empowered, capable people, including: Lay a solid foundation: The parent-child relationship needs to be made from the concrete mixture of emotional availability, positive reinforcement, clear messaging, and consistent rules. From this supportive base, you will forge a bond that will survive adolescence and grow stronger into adulthood. Empower growth: Skyscraper or sprawling bungalow - the style of your child's construction is not up to you! Scaffold parenting validates and accommodates the shape the child is growing into. Any effort to block or control growth will actually stunt it. Stay on

their level: Imagine being on the ground floor of a house and trying to talk to someone on the roof. The person on the roof will have to 'talk down' to you or yell. If your child's building and your scaffold are on the same level, you can speak directly, look each other in the eye, and keep the lines of communication open. Drawing on Dr Koplewicz's decades of clinical and personal experience, *The Scaffold Effect* is a compassionate, smart and essential guide for the ages. All the author's proceeds from the sale of this book will be donated to the Child Mind Institute.

Free-Range Kids, How to Raise Safe, Self-Reliant Children (Without Going Nuts with Worry) - Lenore Skenazy 2010-04-19

FREE RANGE KIDS has become a national movement, sparked by the incredible response to Lenore Skenazy's piece about allowing her 9-year-old ride the subway alone in NYC. Parent groups argued about it, bloggers, blogged, spouses became uncivil with each other, and the media jumped all over it. A lot of parents today, Skenazy says, see no difference between letting their kids walk to school and letting them walk through a firing range. Any risk is seen as too much risk. But if you try to prevent every possible danger or difficult in your child's everyday life, that child never gets a chance to grow up. We parents have to realize that the greatest risk of all just might be trying to raise a child who never encounters choice or independence.

Growth - Vaclav Smil 2019-09-24

A systematic investigation of growth in nature and society, from tiny organisms to the trajectories of empires and civilizations. Growth has been both an unspoken and an explicit aim of our individual and collective striving. It governs the lives of microorganisms and galaxies; it shapes the capabilities of our extraordinarily large brains and the fortunes of our economies. Growth is manifested in annual increments of continental crust, a rising gross domestic product, a child's growth chart, the spread of cancerous cells. In this magisterial book, Vaclav Smil offers systematic investigation of growth in nature and society, from tiny organisms to the trajectories of empires and civilizations. Smil takes readers from bacterial invasions through animal metabolisms to megacities and the global economy. He begins with organisms whose mature sizes range from microscopic to enormous, looking at disease-causing microbes, the cultivation of staple crops, and human growth from infancy to adulthood. He examines the growth of energy conversions and man-made objects that enable economic activities—developments that have been essential to civilization. Finally, he looks at growth in complex systems, beginning with the growth of human populations and proceeding to the growth of cities. He considers the challenges of tracing the growth of empires and civilizations, explaining that we can chart the growth of organisms across individual and evolutionary time, but that the progress of societies and economies, not so linear, encompasses both decline and renewal. The trajectory of modern civilization, driven by competing imperatives of material growth and biospheric limits, Smil tells us, remains uncertain.

Helping Your Child Through Early Adolescence - U.s. Department of Education 2013-10

Early adolescence can be a challenging time for children and parents alike. Parents often feel unprepared and they may view the years from 10 through 14 as a time just “to get through.” However, research and common sense tell us that this view is very limited. During the early adolescent years, parents and families can greatly influence the growth and development of their children. We sell our children short if we expect little from them and we sell ourselves short if we believe that we have no influence. A growing awareness that young adolescents can accomplish a great deal is behind a national effort to improve education in America's middle grades. At the heart of the No Child Left Behind Act of 2001 is a promise to raise standards for all children and to help all children meet those standards. In support of this goal, President George W. Bush is committed to promoting the very best teaching programs. Well-trained teachers and instruction that is based on research can bring the best teaching approaches and programs to children of all ages and help ensure that no child is left behind. *Helping Your Child through Early Adolescence* is part of the president's efforts to provide parents with the latest research and practical information that can help you support your children both at home and in school. It's not easy to raise a young teen. Many outside influences distract our children and complicate our efforts. Exhaustion, anxiety, a lack of support and limited resources may make it hard for us to be all that we want to be for our children. But whatever

the challenges, we share one aim: to do the best job possible as parents. We hope that you will find this publication helpful in achieving this goal.

The Last Lecture - Randy Pausch 2008-04-08

"We cannot change the cards we are dealt, just how we play the hand."--- Randy Pausch A lot of professors give talks titled "The Last Lecture." Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull the same question: What wisdom would we impart to the world if we knew it was our last chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he had recently been diagnosed with terminal cancer. But the lecture he gave--"Really Achieving Your Childhood Dreams"--wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because "time is all you have...and you may find one day that you have less than you think"). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture such a phenomenon and given it an indelible form. It is a book that will

be shared for generations to come.

Ungifted - Scott Barry Kaufman 2013-06-04

Child prodigies. Gifted and Talented Programs. Perfect 2400s on the SAT. Sometimes it feels like the world is conspiring to make the rest of us feel inadequate. Those children tapped as possessing special abilities will go on to achieve great things, while the rest of us have little chance of realizing our dreams. Right? In *Ungifted*, cognitive psychologist Scott Barry Kaufman—who was relegated to special education as a child—sets out to show that the way we interpret traditional metrics of intelligence is misguided. Kaufman explores the latest research in genetics and neuroscience, as well as evolutionary, developmental, social, positive, and cognitive psychology, to challenge the conventional wisdom about the childhood predictors of adult success. He reveals that there are many paths to greatness, and argues for a more holistic approach to achievement that takes into account each young person's personal goals, individual psychology, and developmental trajectory. In so doing, he increases our appreciation for the intelligence and diverse strengths of prodigies, savants, and late bloomers, as well as those with dyslexia, autism, schizophrenia, and ADHD. Combining original research, anecdotes, and a singular compassion, *Ungifted* proves that anyone—even those without readily observable gifts at any single moment in time—can become great.

[Good Economics for Hard Times](#) - Abhijit V. Banerjee 2019-11-12

The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change--these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there--what we lack are ideas that will help us jump the wall of disagreement

and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhijit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, *Good Economics for Hard Times* makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

The Baby Matrix - Laura Carroll 2012-05-17

In the movie *The Matrix*, the character Morpheus offers two pills to Neo—if he takes the blue pill, he will go on with life as he has before, believing what he has always believed. If he takes the red pill, he will find out what the “matrix” really is, and many of his earlier beliefs will be shattered. When it comes to taking a hard look at a specific set of beliefs about parenthood and reproduction that has driven our society for generations, *The Baby Matrix* is the red pill. *The Baby Matrix* looks at long-held beliefs about parenthood and reproduction, and unravels why we believe what we believe. It lays out: We commonly think our desire to have children boils down to our biological wiring, but author Laura Carroll says it's much more than that. Unlike other books on parenthood, *The Baby Matrix: Why Freeing Our Minds From Outmoded Thinking About Parenthood & Reproduction Will Create a Better World* takes a serious look at powerful social and cultural influences that drive the desire for the parenthood experience, and lays out why we need to be very aware of these influences to make the most informed decisions about parenthood. -the historical origins of beliefs about parenthood and reproduction -why many of these beliefs no longer work for society or were never true in the first place -why we continue to believe them anyway -the prices society pays as a result *The Baby Matrix* shows us how we got here, brings to light what is true, which includes knowing about the powerful influence of “pronatalism,” and explains why society can no longer afford to leave pronatalism unquestioned. “This is not a book about convincing people not to have children,” says Carroll. “I want

people to be very aware of the long-held social and cultural pressures, and be able to free themselves from those pressures when making parenthood choices. This will result in more people making the best decisions for themselves, will foster a society in which those who are best suited to become parents are the ones who have children and one that knows what it means to bring a child into the world today.” This book will make you examine your own intentions and beliefs, will rile you, and might just change your mind. Whether you are already a parent, want to become a parent, are still making up your mind, or know you don’t want children, you’ll never think about parenthood in the same way. The Baby Matrix is a must-read for anyone interested in psychology, sociology, anthropology, parenting issues, environmentalism, and social justice. But most of all, it’s for anyone, parent or not, who reveres the truth and wants the best for themselves, their families, and our world.

Middle School Matters - Phyllis L. Fagell 2019-08-06

A counselor and popular Washington Post contributor offers a new take on grades 6-8 as a distinct developmental phase—and the perfect time to set up kids to thrive. Middle school is its own important, distinct

territory, and yet it's either written off as an uncomfortable rite of passage or lumped in with other developmental phases. Based on her many years working in schools, professional counselor Phyllis Fagell sees these years instead as a critical stage that parents can't afford to ignore (and though "middle school" includes different grades in various regions, Fagell maintains that the ages make more of a difference than the setting). Though the transition from childhood to adolescence can be tough for kids, this time of rapid physical, intellectual, moral, social, and emotional change is a unique opportunity to proactively build character and confidence. Fagell helps parents use the middle school years as a low-stakes training ground to teach kids the key skills they'll need to thrive now and in the future, including making good friend choices, negotiating conflict, regulating their own emotions, be their own advocates, and more. To answer parents' most common questions and struggles with middle school-aged children, Fagell combines her professional and personal expertise with stories and advice from prominent psychologists, doctors, parents, educators, school professionals, and middle schoolers themselves.

Democracy and Education - John Dewey 1916

Transforming the Workforce for Children Birth Through Age 8 - National Research Council 2015-07-23

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their

jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

The Collapse of Parenting - Leonard Sax 2015-12-29

In this New York Times bestseller, one of America's premier child psychologists offers a must-read account of the dismal state of parenting today, and a vision for how we can better prepare our children for the challenges of the adult world In *The Collapse of Parenting*, internationally acclaimed author Leonard Sax argues that rising levels of obesity, depression, and anxiety among young people can be traced to parents abdicating their authority. The result is children who have no standard of right and wrong, who lack discipline, and who look to their peers and the Internet for direction. Sax shows how parents must reassert their authority - by limiting time with screens, by encouraging better habits at the dinner table, and by teaching humility and perspective - to renew their relationships with their children. Drawing on nearly thirty years of experience as a family physician and psychologist, along with hundreds of interviews with children, parents, and teachers, Sax offers a blueprint parents can use to help their children thrive in an increasingly complicated world.

Why Won't My Teenager Talk to Me? - John Christopher Coleman
2014-04-24

"It's easier to be a brain surgeon than a really good parent!" No one finds it easy to be a parent of a teenager. How strict or easy-going should you be? What is the best way to support a teenager who is pushing you away? What do you do if homework is being ignored, or if a young person is up half the night on the phone or internet? How do you communicate with someone who seems not to be listening? In this book, international expert, Oxford psychologist and father, Dr John Coleman, provides a new approach to parenting adolescents. Why won't my teenager talk to me? draws on ground-breaking research relating to brain development, sleep patterns in adolescence, and communication to offer a valuable tool enabling parents and carers to become more effective and resilient during this stage. Based on the author's long experience in running workshops for parents of teenagers, the combination of practical advice and research evidence will give readers an invaluable guide to the adolescent stage of life. The book draws on the voices and experiences of a wide range of parents of teenagers. Talking and listening is at the heart of this book. Why Are You Still Sending Your Kids to School? - Blake Boles
2020-05-19

For some kids, school offers a positive and engaging experience. For others, it's a boring, stressful, and frustrating waste of time. If your child is in the second category, why keep tormenting them? Instead, why not help them find an educational environment where they feel genuinely motivated, excited, and empowered? In this eye-opening book, Blake Boles makes the case for leaving conventional school and taking one of the many alternative paths through K-12 that exist today. He addresses parents' major concerns about unconventional education -- Can my kids still go to college? Will they still be employable? How will they learn to work hard? -- while highlighting the hidden benefits of self-directed learning, such as improved parent-child relationships, a more balanced decision-making process regarding college, and a heightened sense of autonomy and connection. Drawing upon 15 years of work as a mentor and guide for adolescents in alternative and experiential learning environments -- as well as his own unconventional life path -- Boles weaves together narrative, theory, and research to build a powerful argument for granting children unusual levels of freedom and responsibility.

Prepared - Diane Tavenner 2021-09-14

A blueprint for how parents can stop worrying about their children's future and start helping them prepare for it, from the cofounder and CEO of one of America's most innovative public-school networks "A treasure trove of deeply practical wisdom that accords with everything I know about how children thrive."—Angela Duckworth, New York Times bestselling author of *Grit* In 2003, Diane Tavenner cofounded the first school in what would soon become one of America's most innovative public-school networks. Summit Public Schools has since won national recognition for its exceptional outcomes: Ninety-nine percent of students are accepted to a four-year college, and they graduate from college at twice the national average. But in a radical departure from the environments created by the college admissions arms race, Summit students aren't focused on competing with their classmates for rankings or test scores. Instead, students spend their days solving real-world problems and developing the skills of self-direction, collaboration, and reflection, all of which prepare them to succeed in college, thrive in today's workplace, and lead a secure and fulfilled life. Through personal stories and hard-earned lessons from Summit's exceptional team of educators and diverse students, Tavenner shares the learning philosophies underlying the Summit model and offers a blueprint for any parent who wants to stop worrying about their children's future—and start helping them prepare for it. At a time when many students are struggling to regain educational and developmental ground lost to the disruptions of the pandemic, *Prepared* is more urgent and necessary than ever.
