Gathering Hopewell - Christopher Carr 2006-03-30

Among the most socially and personally vocal archaeological remains on the North American continent are the massive and often complexly designed earthen architecture of Hopewellian peoples of two thousand years ago, their elaborately embellished works of art made of glistening metals and stones from faraway places, and their highly formalized

mortuaries. In this book, twenty-one researchers in interwoven efforts immerse themselves and the reader in this vibrant archaeological record in order to richly reconstruct the societies, rituals, and ritual interactions of Hopewellian peoples. By finding the faces, actions, and motivations of Hopewellian peoples as individuals who constructed knowable social roles, the authors explore, in a personalized and locally contextualized manner, the details of Hopewellian life: leadership, its sacred and secular power bases, recruitment, and formalization over time; systems of social ranking and prestige; animal-totemic clan organization, kinship structures, and sodalities; gender roles, prestige, work load, and health; community organization in its tri-scalar residential, symbolic, and demographic forms; intercommunity alliances and changes in their strategies and expanses over time; and interregional travels for power questing, pilgrimage, healing, tutelage, and acquiring ritual knowledge. This book is useful to scholars, graduate students, and advanced undergraduates interested in the workings and development of social complexity at local and interregional scales, recent theoretical developments in the anthropology of the topics listed above, the prehistory of eastern North America, its history of intellectual development, and Native American ritual, symbolism, and belief.

The Teacher's Encyclopaedia of the Theory, Method, Practice, History and Development of Education at Home and Abroad - Arthur Pillans Laurie 1911

Rediscovering the World - Benjamin Hennig 2012-12-14

'We need new maps' is the central claim made in this book. In a world increasingly influenced by human action and interaction, we still rely heavily on mapping techniques that were invented to discover unknown places and explore our physical environment. Although the traditional concept of a map is currently being revived in digital environments, the underlying mapping approaches are not capable of making the complexity of human-environment relationships fully comprehensible. Starting from how people can be put on the map in new ways, this book outlines the development of a novel technique that stretches a map according to quantitative data, such as population. The new maps are

called gridded cartograms as the method is based on a grid onto which a density-equalising cartogram technique is applied. The underlying grid ensures the preservation of an accurate geographic reference to the real world. It allows the gridded cartograms to be used as basemaps onto which other information can be mapped. This applies to any geographic information from the human and physical environment. As demonstrated through the examples presented in this book, the new maps are not limited to showing population as a defining element for the transformation, but can show any quantitative geospatial data, such as wealth, rainfall, or even the environmental conditions of the oceans. The new maps also work at various scales, from a global perspective down to the scale of urban environments. The gridded cartogram technique is proposed as a new global and local map projection that is a viable and versatile alternative to other conventional map projections. The maps based on this technique open up a wide range of potential new applications to rediscover the diverse geographies of the world. They have the potential to allow us to gain new perspectives through detailed cartographic depictions.

Partial List of Microfilms of Books Printed in England Before 1640 -

University Microfilms 1937

Psychology of Exceptional Children and Youth - William M. Cruickshank 1971
