Indian Textiles - John Gillow
2008

"The production of textiles in India continues to flourish just as it has for many centuries. The interactions of peoples - indigenous tribes, invaders, traders, explorers - through history has built a culture legendary for its variety and colour. From the Rann of Kutch to the Coromandel coast, from city and village, handloom

weavers, block printers, painters, dyers and embroiderers are all creating the most extraordinary textiles." "This all-encompassing survey of textiles from every region of the Indian subcontinent runs the gamut of commercial, tribal and folk textiles. The authors first place them in context by examining the cultural background: the history, the materials and the techniques - weaving, printing, painting and tie-and-dye. They then give a detailed region-by-region account of traditional textile production, including chapters on Pakistan, Bangladesh and Sri Lanka. An array of images provides an unsurpassed visual representation of the textiles, while a detailed reference section with further reading, museums and information on technical terms completes this essential guide."--BOOK JACKET.

Database System Concepts - Henry F. Korth 2019-02-19
Database System Concepts by Silberschatz, Korth and Sudarshan is now in its 6th edition and is one of the cornerstone texts of database education. It presents the fundamental concepts of database management in an intuitive manner geared toward allowing students to begin working with databases as quickly as possible. The text is

designed for a first course in databases at the junior/senior undergraduate level or the first year graduate level. It also contains additional material that can be used as supplements or as introductory material for an advanced course. Because the authors present concepts as intuitive descriptions, a familiarity with basic data structures, computer organization, and a high-level programming language are the only prerequisites. Important theoretical results are covered, but formal proofs are omitted. In place of proofs, figures and examples are used to suggest why a result is true.
