Reproductive Tract Infections - Adrienne Germain 2013-06-29

Reproductive tract infections (RTIs) have become a silent epidemic that is devastating women's lives. Each year, thousands of women die needlessly from the consequences of these infections, including cervical cancer, ectopic pregnancy, acute and chronic infections of the uterus and the fallopian tubes, and puerperal infections. For many women, this happens because they receive medical attention too late, if at all. The terrible irony of this tragedy is that early diagnosis of and treatment for many RTIs do not require high-technology health care. For the hundreds of millions of women with chronic RTIs acquired from their sexual partners, life can become a living hell. Infection is a major cause of infertility, and it leads to scorn and rejection in many countries. These women may experience constant pain, have festering lesions of the genital tract, be at enhanced risk of secondary diseases, and endure social ostracism. The problems associated with RTIs have grown even greater in the past decade with the emergence of human immunodeficiency virus (HIV) and AIDS. Preexisting sexually transmitted disease, particularly when associated with genital tract ulcers, raises women's vulnerability to the transmission of HIV 3-5 fold.

Disease Control Priorities, Third Edition (Volume 2) - Robert Black 2016-04-11

The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted

infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

Mosby's Anatomy Coloring Book - Barbara A. Magerl 2003-12-01

This innovative new resource covers basic body systems, beginning with the skin and ending with the reproductive system. The illustrations have been created specifically for this book, and each features a simplicity of scope and format that is perfect for introductory anatomy and physiology courses. To ensure that students approach each figure correctly, all pages contain a brief statement describing the body system and directions for completion. From there, the student can color each body part and identify them by name using the labeled leader lines. Original, simple illustrations make coloring and body part identification easy. The basic scope ensures that students will not be overwhelmed with information that is not needed for their course. Perforated pages facilitate classroom study and review, and provide flexibility to both the instructor and the student. Each figure is backed by a blank page so students can make notes regarding any given body part without interfering with the illustration. The corresponding answer key located in the back of the book provides a quick reference for the student to check accuracy and spelling. A pronunciation guide, listed after the answer key, has been created to ensure students pronounce medical terms with accuracy and confidence.
