Core skills at - Great Britain:
National Audit Office
2011-12-02

HM Revenue and Customs will have to make sure its staff have the right skills if it is to succeed in cutting its running costs by 25 per cent by 2014-2015 and bringing in each year an extra £7 billion of tax revenue. It is estimated that HMRC spent £96 million in 2010-11 developing the skills of its staff but judges that spending is not systematically directed on top level business priorities. Staff skills will have been a factor in the improvement of HMRC's

business results including the extra £1 billion tax generated since 2010 by enforcement and compliance activity. But currently there is not a direct evidential link between results and training and development activities. Only 54 per cent of HMRC staff said that they were able to access the right learning and development opportunities when they needed to and only 38 per cent said that training had improved their performance. Evidence from a customer survey and external stakeholders also suggests that the Department does not have all the skills it needs, but HMRC does not have a good overview of its current skills gaps. It needs better data and information on gaps which would help it take a more strategic approach and gain an early warning of future skills gaps, such as the risk of skills depleting as experienced staff retire. This is of particular concern in HMRC as one in five staff in key business areas are over 55. HMRC also lacks governance arrangements or structures to hold the

organization to account for money spent on training. Many of the points in this report were raised previously by HMRC's own reviews but the Department has not made the changes needed.

leaders and anyone with a keen interest in this rapidly evolving field. For too long business has focused on short-term cost advantages through low-cost country sourcing with little regard for the longer-term implications of global sustainability. As the first book to fully address the environmental, social and economic challenges of how companies manage purchasing and supply chains, it aims to inspire the development of current and future purchasing and supply chain leaders. In addition to explaining the basic principles and processes of both purchasing and supply chain management, the book evaluates how to develop strategic and sustainable purchasing and supply chain management. A key message is that purchasing and supply chain management needs to focus on value creation rather than cost cutting. This requires the development of completely new purchasing and supply chain models that involve closed-loop supply structures, supply chain transparency and

collaboration with new stakeholders in traditional sourcing and supply chain processes. Aimed at students, educators and practitioners the book integrates sustainability into each chapter as a core element of purchasing and supply chain management. Incorporating case studies from industry into each chapter, the book strikes a balance between theoretical frameworks and guidelines for implementation in practice.
