**Crafting Textiles in the Digital Age** - Nithikul Nimkulrat 2016-09-08

In an era of increasingly available digital resources, many textile designers and makers find themselves at an interesting juncture between traditional craft processes and newer digital technologies. Highly specialized craft/design practitioners may now elect to make use of digital processes in their work, but often choose not to abandon craft skills fundamental to their practice, and aim to balance the complex connection between craft and digital processes. The essays collected here consider this transition from the viewpoint of aesthetic opportunity arising in the textile designer's hands-on experimentation with material and digital technologies available in the present. Craft provides the foundations for thinking within the design and production of textiles, and as such may provide some clues in the transition to creative and thoughtful use of current and future digital technologies. Within the framework of current challenges relating to sustainable development, globalization, and economic constraints it is important to interrogate and question how we might go about using established and emerging technologies in textiles in a positive manner.

**Textile Design** - A Briggs-Goode 2011-04-15

Textile design is a complex field of practice which operates in a competitive, global industry. Designers need to take into account not only the design but also the manufacture, technological development and application of the final product. Textile design provides a broad overview of the fundamentals of and advances in textile design, as well as practical case studies of relevant industries. Part one covers the principles of fabric construction as applied to textile design, with chapters on fundamental principles, woven and knitted textile design. Part two discusses surface approaches to textile design, with chapters on such topics as surface design of textiles, printed and embroidered textile design, dyeing and finishing and the use of colour in textile design. Finally, part three focuses on the applications and advances in textile design, including chapters covering colour trend forecasting, sustainable textile design, fashion, interior and 2D to 3D design considerations and new developments in technical and future textiles. With its distinguished editors and international team of contributors, Textile design is an essential reference for design professionals in the textile and fashion industries, as well as those who specialise in interior textiles and academics with a research interest in the area. A broad overview of textile design covering fundamental topics such as principles of fibres

and fabrics, knitted fabric design, through to the dyeing, finishing and printing aspects of textile design Explores the design aspects of technical textiles and future textiles An invaluable source of information on textile design and suitable for design professionals in the textile and fashion industries, as well as those in academia

**Lasers and Their Applications** - Phoenix Walsh 2018-11-26

A laser is a device that emits light through a process of optical amplification based on the stimulated emission of electromagnetic radiation. The term "laser" originated as an acronym for "light amplification by stimulated emission of radiation". Laser Applications provides a firm grounding in the fundamental concepts over governing the field on Optics. This reference book is useful for the students of B.E., B.Tech. and M.Tech., courses. The present book is an attempt to treat the subject of Laser as an introductory course. With recent major breakthroughs in ultrafast laser technology and femtosecond nonlinear spectroscopic techniques, Femtosecond Laser Spectroscopy is currently a burgeoning field in many branches of science, including physics, chemistry, biology, and materials science. Attempts have also been made to cover the frontline areas in the subject. The development of Laser and its various applications in Communications, Radiation, medicine, Holography etc., has been given due importance.

**Fashion Design for Living** - Alison Gwilt 2014-11-13

Fashion Design for Living explores the positive contribution that the contemporary fashion designer can make within society. The book seeks to reveal new ways of designing and making fashion garments and products that not only enhance and enrich our lives, but also are mindful of social and sustainable issues. This book sets out to question and challenge the dominant, conventional process of fashion design that as a practice has been under-researched. While the fashion designer in industry is primarily concerned with the creation of the new seasonal collection, designed, produced and measured by economically driven factors, society increasingly expects the designer to make a positive contribution to our social, environmental and cultural life. Consequently an emergent set of designers and research-based practitioners are beginning to explore new ways to think about fashion designing. The contributors within this book argue that fashion designing should move beyond developing garments that are just aesthetically pleasing or inexpensive, but also begin to consider and respond to the wearer's experiences, wellbeing, problems, desires and situations, and their engagement with and use of a garment. Fashion Design for Living champions new approaches to fashion practice by uncovering a rich and diverse set of views and reflective experiences which explore the changing role of the fashion designer and inspire fresh, innovative and creative responses to fashion and the world we live in.

Gustave Trouvé - Kevin Desmond 2015-08-07

In the latter half of the 19th century, Gustave Pierre Trouvé, a modest but brilliant Parisian electrical engineer, conceived and patented some 75 inventions, including the endoscope, the electric car and the frontal headlamp. He also designed an electric boat—complete with outboard motor, headlight and horn—an electric rifle, an electric piano and luminous fountains, and developed wearable technology and ultraviolet light therapy. Unlike his famous contemporary Nikola Tesla, who worked for Thomas Edison and was patronized by George Westinghouse, Trouvé never came to America. A confirmed bachelor disinterested in industrialization, he was gradually forgotten following his accidental death in 1902. This expanded edition of the 2012 French first-ever biography of Trouvé details the fascinating life of the Chevalier of the Legion of Honor once dubbed “the French Edison.”
