Early Childhood Assessment - National Research Council 2008-12-21

The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. *Early Childhood Assessment* addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

Behavioral, Social, and Emotional Assessment of Children and Adolescents - Kenneth W. Merrell 2003

Behavioral, Social, and Emotional Assessment of Children and Adolescents, Second Edition was written to provide a comprehensive foundation for conducting clinical assessment of child and adolescent social-emotional behavior in a practical, scientific, and culturally appropriate manner. It is divided into two major sections. Part I includes eight chapters that provide a general foundation for assessment practice. These chapters include coverage of basic professional and ethical issues, classification and diagnostic problems, and six primary assessment methods, which are presented in detail. Part II includes six chapters on applications for assessing specific social-emotional behavior domains, including internalizing and externalizing problems, social skills and peer relations, young children, and diverse cultural groups. Together, these two sections provide a framework for a model of assessment that is practical, flexible, sensitive to specific needs, and empirically sound. Changes in the second edition of this book include: increased coverage of the practice of functional behavior assessment; updated test reviews; reviews of new assessment instruments; updated information on legal and ethical issues; updated information on assessment and cultural diversity; and a handy appendix with contact information for all publishers of instruments discussed in the book, including Web site addresses. To the greatest extent possible, this book weaves together the most recent research evidence and common application issues. It is specifically relevant to practitioners and researchers in the fields of school psychology and child clinical psychology, but will also be of interest to those in related disciplines, such as counseling, social work, child psychiatry, and special education.

Social-Emotional Assessment/Evaluation Measure (Seam) - Jane Squires 2014-01-01

With this in-depth, easy-to-use tool, your program can reliably assess and monitor social-emotional development in infants, toddlers, and preschoolers at risk for delays or challenges. An ideal followup to screeners such as ASQ:SE, the two-part SEAM(tm) assessment reveals detailed qualitative information on children's social-emotional competence-- and identifies their caregivers' strengths and areas of need. Easy to learn and implement, SEAM can be used by a wide variety of early childhood professionals, including those with little or no training in mental-health or behavioral interventions. SEAM helps your program: support development of important social-emotional skills in order to minimize challenging behaviors build strong, proactive partnerships with families promote positive parent-child interactions in the critical first years of life assist with developing developmentally appropriate goals and intervention activities monitor child progress toward social-emotional goals SEAM is a two-part assessment; All forms are available in English and Spanish on the CD-ROM or e-book. SEAM Tool The main SEAM includes three intervals with different developmental ranges: Infant (2-18 months), Toddler (18-36 months), and Preschool (36-66 months). Each interval assesses 10 child benchmarks critical to social-emotional competence, including empathy, adaptive skills, self-image, emotional responses, and healthy interactions with others. SEAM is flexible enough to meet your specific needs-- parents/caregivers can complete it independently, or you can conduct it jointly with

them if they need extra guidance. The SEAM system also includes SEAM with Ages, an alternate version of the tool annotated with a helpful list of age ranges for each item. This version makes it easy to give caregivers general guidance on how social-emotional skills typically develop and where their child's development fits on the continuum. SEAM Family Profile The Family Profile assesses parent and caregiver strengths and helps identify areas in which they need more supports and resources to foster their child's social-emotional skills. Like the main SEAM, the Family Profile assessment includes three intervals-- Infant, Toddler, and Preschool. Each interval measures four benchmarks key to a nurturing home environment: responding to needs, providing activities and play, providing predictable routines and an appropriate environment, and ensuring home safety. List of SEAM benchmarks Child participates in healthy interactions Child expresses a range of emotions Child regulates social-emotional responses Child begins to show empathy for others Child attends to and engages with others Child explores hands and feet and surroundings (for infants)/demonstrates independence (for toddlers/preschoolers) Child displays a positive self-image Child regulates activity level Child cooperates with daily routines and requests Child shows a range of adaptive skills View the webinar recording of Using the Social-Emotional Assessment/Evaluation Measure (SEAM(tm)) with Young Children, presented by Jane Squires, Ph.D., and Misti Waddell, M.S. Ages & Stages Questionnaires(r) Social-Emotional in Spanish (Asq: Se-2 Spanish): A Parent-Completed Child Monitoring System for Social-Emotional Behav - Jane Squires 2015-08-15

Watch a webcast on the new edition! Coming in Fall 2015! The ASQ: SE-2 questionnaires are the most cost-effective, reliable way to screen young children for social-emotional issues in the first 6 years of life. Now in a NEW second edition, the 9 age-appropriate questionnaires (2, 6, 12, 18, 24, 30, 36, 48, and 60 months) effectively screen 7 key social-emotional areas: self-regulation, compliance, adaptive functioning, autonomy,

affect, social-communication, and interaction with people. What's New in ASQ: SE-2 The Spanish ASQ: SE-2 questionnaires are better than ever, with helpful new features like: Updated Spanish translation that went through a rigorous vetting process by Spanish language experts, so the questionnaires are appropriate across dialects spoken in the US. New 2 month questionnaire: Reliably screen and start monitoring children as young as 1 month, so critical interventions can start earlier. Screen through kindergarten: Now you can screen children from 1 72 months with no gaps, so you can use ASQ: SE-2 through kindergarten and the transition to school. New behavior and communication items designed to elicit parent concerns that may point to autism and early communication issues. New data and cutoffs: ASQ: SE-2 is based on updated research and a large sample size of more than 14,000 diverse children. New monitoring zone that clearly identifies children who are close to the cutoff and should be monitored and rescreened. Questionnaire items revised and refined based on user feedback, to help parents provide the best responses. Sturdy, convenient new box with a handle for easy portability. How to Use ASQ: SE-2 Questionnaires Fast and easy to use, ASQ: SE-2 questionnaires take just 10 15 minutes for parents to complete. First, parents fill out the questionnaire, checking the response that best describes their child's behavior: "often or always, sometimes, " or "rarely or never." Clear questions help parents complete the questionnaires quickly and accurately, and open-ended questions ask about any related parental concerns. Professionals score the questionnaire in just 2 3 minutes, and then transfer a total score to a simple summary sheet along with any concerns the parent has noted. The summary sheet, a visual indicator of social emotional development and parent concerns, indicates whether any followup should be considered. Total scores that fall in the graph's range of Risk (dark shaded zone) indicate the child may need further evaluation. NEW! A total score in the new a monitoring zone (light shaded area) helps identify children that may require followup actions based on items of concern. Professionals can work with parents to address behaviors of concern and provide social-emotional

development information sheets and activities to help their child make progress before the next screening. Scores outside the shaded zones mean the child's social-emotional development appears to be developing on schedule. Parents can monitor their child's development by rescreening at the next ASQ: SE-2 interval. When you purchase a box of ASQ: SE-2 questionnaires, you'll get photocopyable master copies on paper and printable PDF master copies on CD-ROM so you and your staff will always have the format you want, right at your fingertips. Convenient, easy online completion and management for ASQ: SE-2 questionnaires are both available with the purchase of ASQ Online. ASQ: SE-2 questionnaires are also available in English. Behavioral Inhibition - Koraly Pérez-Edgar 2018-09-22

This book examines three decades of research on behavioral inhibition (BI), addressing its underlying biological, psychological, and social markers of development and functioning. It offers a theory-to-practice overview of behavioral inhibition and explores its cognitive component as well as its relationship to shyness, anxiety, and social withdrawal. The volume traces the emergence of BI during infancy through its occurrences across childhood. In addition, the book details the biological basis of BI and explores ways in which it is amenable to environmental modeling. Its chapters explore the neural systems underlying developmental milestones, address lingering questions (e.g., limitations of studying BI in laboratory settings and debatable benefits of self-regulatory processes), and provide recommendations for future research. Key areas of coverage include: Animal models of behavioral inhibition. Social functioning and peer relationships in BI. Attention mechanisms in behavioral inhibition. BI and associative learning of fear. Behavioral inhibition and prevention of internalizing distress in early childhood. The relations between BI, cognitive control, and anxiety. Behavioral Inhibition is a must-have resource for researchers, clinicians, scientist-practitioners, and graduate students across such fields as developmental psychology, psychiatry, social work, cognitive and affective developmental neuroscience, child and school psychology, educational psychology, and pediatrics.
