Technology for a Quieter America - National Academy of Engineering 2010-09-30
Exposure to noise at home, at work, while traveling, and during leisure activities is a fact of life for all Americans. At times noise can be loud enough to damage hearing, and at lower levels it can disrupt normal living, affect sleep patterns,

affect our ability to concentrate at work, interfere with outdoor recreational activities, and, in some cases, interfere with communications and even cause accidents. Clearly, exposure to excessive noise can affect our quality of life. As the population of the United States and, indeed, the world increases

and developing countries become more industrialized, problems of noise are likely to become more pervasive and lower the quality of life for everyone. Efforts to manage noise exposures, to design quieter buildings, products, equipment, and transportation vehicles, and to provide a regulatory environment that facilitates adequate, cost-effective, sustainable noise controls require our immediate attention. Technology for a Quieter America looks at the most commonly identified sources of noise, how they are characterized, and efforts that have been made to reduce noise emissions and experiences. The book also reviews the standards and regulations that govern noise levels and the federal, state, and local agencies that regulate noise for the benefit, safety, and wellness of society at large. In addition, it presents the cost-benefit trade-offs between efforts to mitigate noise and the improvements they achieve, information sources available to the public on the dimensions of noise problems

and their mitigation, and the need to educate professionals who can deal with these issues. Noise emissions are an issue in industry, in communities, in buildings, and during leisure activities. As such, Technology for a Quieter America will appeal to a wide range of stakeholders: the engineering community; the public; government at the federal, state, and local levels; private industry; labor unions; and nonprofit organizations. Implementation of the recommendations in Technology for a Quieter America will result in reduction of the noise levels to which Americans are exposed and will improve the ability of American industry to compete in world markets paying increasing attention to the noise emissions of products. Returning People to the Moon After Apollo -

Pat Norris 2019-06-04

July 2019 marks 50 years since Neil Armstrong took his famous first steps on the surface of the Moon. As people around the world celebrate the anniversary of this great American achievement, they might wonder why there have been no further human missions to the Moon since Apollo

17 in 1972. This book assesses the legacy of the Apollo missions based on several decades of space developments since the program's end. The question of why we haven't sent humans back to the Moon is explored through a multidisciplinary lens that weaves together technological and historical perspectives. The nine manned Apollo missions, including the six that landed on the Moon, are described here by an author who has 50 years of experience in the space industry and whose work spanned the Apollo 8-13 missions. The final section of the book provides a comprehensive assessment of today's programs and current plans for sending humans to the Moon.

Drone War Vietnam - David Axe 2021-09-30

While the use of drones is now commonplace in modern warfare, it was in its infancy during the Vietnam War, not to mention revolutionary and top secret. Drones would play an important □ and today largely unheralded □ role in the bloody, two-decade US air war over Vietnam and

surrounding countries in the 1960s and 1970s. Drone aircraft spotted targets for manned US bombers, jammed North Vietnamese radars and scattered propaganda leaflets, among other missions. This book explores that obscure chapter of history. DRONE WAR: VIETNAM is based on military records, official histories and published first-hand accounts from early drone operators, as well as on a close survey of existing scholarship on the topic. In their fledgling efforts to send robots instead of human beings on the most dangerous aerial missions, US operators in South-East Asia in the 1960s and 1970s wrote the first chapter in the continuing tale of autonomous warfare.

Iraq in Crisis - Anthony H. Cordesman
2014-06-04

Iraq is a nation in crisis bordering on civil war. The country now faces growing violence, a steady rise in Sunni Islamist extremism, an increasingly authoritarian leader that favors Iraq's Sunnis, and growing ethnic tension

between Arabs and Kurds. The recent Iraqi election offers little promise that it can correct the corruption, the weaknesses in its security forces, and the critical failures in governance, economic development, and leadership. The problems Iraq faces in 2014 are a legacy of mistakes made during and after the U.S.-led invasion in 2003, but increasingly the nation is dealing with the self-inflicted wounds of its leaders who abuse human rights, repress opposing factions, and misuse the Iraqi police and security forces to their own end.

Temagami Lakes Association - Pamela Sinclair 2011-06

The Temagami region of northern Ontario has been a magnet for recreational canoeists since the 1890s, when city dwellers began embarking on long, gruelling trips to reach its unfettered wilderness. The land is steeped in the history of its tribal inhabitants, the Teme-Augama

Anishnabai (TAA), whose roots are 6,000 years deep. At the turn of the 20th century, the TAA still hunted on their traditional family territories, trading pelts at the Hudson's Bay Company post on Bear Island. The railway arrived in 1904, easing travel from all over North America. Steamships conveyed passengers to all five arms of the lake where rustic resorts and youth camps were popping up. Soon, the village of Temagami became a tourism hub. Logging and mining would later diversify the economy. The province of Ontario began leasing the lake's more than 1,200 islands in 1906. In 1931 cottagers united against logging near the mainland shoreline under the Timagami Association banner, now the Temagami Lakes Association. Temagami is the only Ontario lake where mainland shoreline development is banned Temagami Lakes Association: The Life and Times of a Cottage Community recounts Temagami's history to 2011, and examines the Association's often convoluted, occasionally controversial,

relationships with the TAA, various levels of government, villagers and within its own ranks. The narrative is lightened by cottagers' tales of mice invasions, flesh-embedded fish hooks, encounters with big screen stars, cabin construction gone awry and the like. More than 150 photos enliven the text.

Complex Systems Design & Management - Daniel Krob 2021-04-09

This book contains all refereed papers accepted during the fourth asia-pacific edition & twelve edition - which were merged this year - of the CSD&M conference that took place in Beijing, People's Republic of China by 2021. Mastering complex systems requires an integrated understanding of industrial practices as well as sophisticated theoretical techniques and tools. This explains the creation of an annual go-between European and Asian forum dedicated to

academic researchers & industrial actors working on complex industrial systems architecting, modeling & engineering. These proceedings cover the most recent trends in the emerging field of complex systems, both from an academic and professional perspective. A special focus was put this year on “Digital Transformation in Complex Systems Engineering”. CESAM Community The CSD&M series of conferences are organized under the guidance of CESAM Community, managed by CESAMES. CESAM Community aims in organizing the sharing of good practices in systems architecting and model-based systems engineering (MBSE) and certifying the level of knowledge and proficiency in this field through the CESAM certification. The CESAM systems architecting & model-based systems engineering (MBSE) certification is especially currently the most disseminated professional certification in the world in this domain through more than 1,000 real complex system development projects

on which it was operationally deployed and around 10,000 engineers who were trained on the CESAM framework at international level.

air traffic control, and aircraft certification. We publish this because as far as we know, a print copy is not available anywhere. Why buy a book you can download for free? We print this book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book includes

original commentary which is copyright material. Note that government documents are in the public domain. We print these large documents as a service so you don't have to. The books are compact, tightly-bound, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a HUBZONE SDVOSB. <https://usgovpub.com>

Extreme Economies - Richard Davies 2020-07-20

to shape our collective future. Reviving a foundational idea from the medical sciences, Extreme Economies turns the logic of modern economics on its head by arguing that these outlier societies can teach us more about our own than we might imagine. By adapting to circumstances unimaginable to most of us, the people in these societies are pioneering the economic infrastructure of the future.

Japanese Aero-Engines 1910-1945 - Mike Goodwin 2017-03-27

In this book the authors have endeavored to remedy the notable lack of comprehensive coverage. The development of all the many engines produced by Japanese aero-engine manufacturing companies from 1912 to 1945 is explored in detail, including a full explanation of

the different systems used to identify them. Furthermore, the developments are related to the aircraft in which the various engines were used, including prototypes, flying test-beds, and changes in the make or type of engine during an aircraft's operational service. In other words aircraft evolution in Japan is viewed in snapshots as it happened from the aero-engine aspect and not from the complete aircraft aspect as is featured in most publications. Unfortunately this approach necessitates numerous cross-references in the text where several different engines are associated with a particular aircraft, for which the authors can only apologize. Lastly, to illustrate the industrial background, the origin and development of each of the aero-engine manufacturing companies is also outlined briefly

evolving and remaining competitive and modernizing our digital environment for great power competition is imperative for the Department of Defense. We must act now to secure our future. This Digital Modernization Strategy is the cornerstone for advancing our digital environment to afford the Joint Force a competitive advantage in the modern battlespace. Our approach is simple. We will increase technological capabilities across the Department and strengthen overall adoption of enterprise systems to expand the competitive space in the digital arena. We will achieve this through four strategic initiatives: innovation for advantage, optimization, resilient cybersecurity, and cultivation of talent. The Digital Modernization Strategy provides a roadmap to support implementation of the National Defense Strategy lines of effort through the lens of cloud, artificial intelligence, command, control and communications and cybersecurity. This approach will enable increased lethality for the

Joint warfighter, empower new partnerships that will drive mission success, and implement new reforms enacted to improve capabilities across the information enterprise. The strategy also highlights two important elements that will create an enduring and outcome driven strategy. First, it articulates an enterprise view of the future where more common foundational technology is delivered across the DoD Components. Secondly, the strategy calls for a Management System that drives outcomes through a metric driven approach, tied to new DoD CIO authorities granted by Congress for both technology budgets and standards. As we modernize our digital environment across the Department, we must recognize now more than ever the importance of collaboration with our industry and academic partners. I expect the senior leaders of our Department, the Services, and the Joint Warfighting community to take the intent and guidance in this strategy and drive implementation to achieve results in support of

Arms Industry Transformation and Integration - Yudit Kiss 2014

The defence industry was one of the pillars of the classic command economy system in Central Europe. Since the early 1990s the sector has gone through dramatic changes. It was radically downsized, reorganized and restructured according to the needs of the emerging new socio-economic systems. One of the major factors that shaped this adjustment was the enlargement of NATO and the European Union and the prospect of integration into these two organizations. The military establishments and defence industries became principal actors in the integration process, which helped them to acquire new economic resources and political legitimization. At the same time, integration presented unexpected new challenges and constraints for the restructuring defence industry in the region. This report describes how the defence industry adjusted to the changed

political and economic environment in both the domestic and international context. The comparative analysis of the post-cold war experience of six Central European countries - Bulgaria, the Czech Republic, Hungary, Poland, Romania and Slovakia, which joined in the first two waves of enlargement - provides valuable lessons for other countries in their processes of socio-economic transformation.

fire position standards, qualifications requirements, and performance support capabilities (e.g. training courses, job aids) that enable implementation of NWCG standards; Support the National Cohesive Wildland Fire Management Strategy goals: to restore and maintain resilient landscapes; create fire adapted communities; and respond to wildfires safely and effectively; Establish information technology (IT) capability requirements for wildland fire; and Ensure that all NWCG activities contribute to safe, effective, and coordinated national interagency wildland fire operations. The objectives of the "Interagency Helicopter Operations Guide" (IHOG) are to: Promote safe, cost-efficient and effective aviation services in support of agency and interagency goals and objectives; Define and standardize national, interagency helicopter management and operational procedures for helicopter users from participating agencies; Through standardization, facilitate the ability of

personnel from different agencies to work cooperatively on incidents or projects; and Provide a framework within which areas, regions, states, and local units can provide supplemental, site-specific guidance. The procedures contained in this guide apply to helicopter operations conducted by providers and users of helicopters from participating agencies. This guide addresses both incident and resource helicopter operations.
