Diana Ferrus 2011-05-19

She completed a postgraduate degree in Women's and Gender studies at the University of the Western Cape where she works as an administrator in the Dept of Industrial Psychology. Diana co-edited and published a collection of stories about fathers and daughters, *Slaan vir my 'n masker, Vader* in 2006. published life stories of three former activists and unionists namely, Liz Nana Abrahams, Zollie Malindi and Archie Sibeko. These publications contain rich material about South Africa's past and some are prescribed texts at the University of the Western Cape. She is a founder member of the Afrikaanse Skrywersvereniging (ASV), Bush Poets (all women poets) and Women in Xchains (grassroots women writers). Peter Stark is the legendary white Bushman who writes about his experiences in the former German South West Africa.

Economies of Recycling - Catherine Alexander
2012-08-09

For some, recycling is a big business; for others a moralised way of engaging with the world. But, for many, this is a dangerous way of earning a living. With scrap now being the largest export category from the US to China, the sheer scale of this global trade has not yet been clearly identified or analysed.

Combining fine-grained ethnographic analysis with overviews of international material flows, *Economies of Recycling* radically changes the way we understand global and local economies as well as the new social relations and

identities created by recycling processes. Following global material chains, this groundbreaking book reveals astonishing connections between persons, households, cities and global regions as objects are reworked, taken to pieces and traded. With case studies from Africa, Latin America, South Asia, China, the former Soviet Union, North America and Europe, this timely collection debunks common linear understandings of production, exchange and consumption and argues for a complete re-evaluation of North-South economic relationships.

Two Russian peasant boys investigate their village's mysterious past and unleash the anger of a shadowy overlord. As they look for answers in gambling parlors, bare-knuckle boxing matches and dark forests full of wild men and animals, can they escape the deadly experiments their enemy is waiting to perform on them in his castle? *Examining the Phenomenon of "Teaching Out-of-field"* - Linda Hobbs 2019-01-01

This book identifies and surveys the major themes around 'out-of-field teaching', that is, teaching subjects or year levels without a specialization. This has been an issue in many countries for some time, yet until recently there has been little formal research and poor policy responses to related problems.

This book arises out of collaborations between members of an international group of researchers and practitioners from Australia, Germany, Ireland, England, South Africa, Indonesia and the United States. Cross-national comparisons of ideas through case studies, descriptions of practice and research data interrogates the experiences, practices, and contexts relating to out-of-field teaching. In particular, the book considers the phenomenon of out-of-field teaching in relation to national policy contexts, local school leadership practices, professional development. The book represents an essential contribution on a highly topical issue that has implications for quality and equitable education around the globe.

- L. E. Sigler 2014-06-28
The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

The Fall of the University of Cape Town - David Benatar
2021-11-09

Destructive forces have been eroding the University of Cape Town, Africa's leading university. This book tells the sad, true tale of what has been transpiring. It is a saga of lunacy, criminality, pandering, and identity politics. The mad and the bad - the deranged, deluded, the depraved - have been granted endless latitude in bullying and abusing others. The decline began in 2015 with the Rhodes Must Fall protest that resulted in the offending statue's removal within a month, and which spawned similar protests abroad. Emboldened by their local success, the protestors issued new and ever-increasing demands later that year and then again in 2016 and 2017. Their methods also became criminal - including intimidation, assault, and arson. The university leadership capitulated to this behaviour, and this fostered a

broader and now pervasive toxic environment within the institution. These developments offer important lessons for universities around the world that are yielding to the forces of a faux "progressivism".

Work Explained to Career Starters - Andreas Landman
2018-11

Many young adults start their career every year. Bright-eyed and bushy-tailed and frightened. "Work Explained to Career Starters" explains to young adults that job-hunting is the easy part (even if they have been looking for months and handed out hundreds of CV's). The hard part is deciding who to work for and keeping the job you decided on. The mental image a young adult has of working for a living might be far removed from reality. Being a career starter is daunting. This book will help make it easier for the young adult to move from life at home to work at a company. The young adult might not even know him- or herself and must decide to start their career at a

company where the culture and value system is in line with their own. The young adult must know that all is not as their parents presented it to them - adulthood is hard.

Young adults must know that not all of the money promised them would come their way - they must only plan to spend as much as they can reasonably expect to earn. Young adults, as workers, have rights. Their main role, however, is to follow instructions. These instructions must be followed in a safe way. This book will open the young adults' eyes to the world of working for a company.

Tangled Up in School - Jan Nespore
2013-11-26

Based on two years of ethnographic fieldwork in an urban elementary school, this volume is an examination of how school division politics, regional economic policies, parental concerns, urban development efforts, popular cultures, gender ideologies, racial politics, and university and corporate agendas come together to produce educational effects. Unlike

conventional school ethnographies, the focus of this work is less on classrooms than on the webs of social relations that embed schools in neighborhoods, cities, states, and regions. Utilizing a variety of narratives and analytical styles, this volume: * explores how curriculum innovations are simultaneously made possible by and undermined by school district politics, neighborhood histories, and the spatial and temporal organizations of teachers' and parents' lives; * situates the educational discourse of administrators and teachers in the changing economic and political climates of the city; * analyzes the motivations behind an effort by school and business proponents to refashion classrooms within the school into business enterprises, and of children's efforts to make sense of the scheme; * examines the role of the school as a neighborhood institution, situating it at the intersections of city planners' efforts to regulate city space and children's efforts to carve out

live spaces through out-of-school routines; * contemplates the meaning of school as a site for bodily experience, and looks at how patterns of space and control in the school shaped children's bodies, and at how they continued to use body-based languages to construct maturity, gender, and race; and * investigates the school as a space for the deployment of symbolic resources where children learned and constructed identities through their engagements with television, comic books, movies, and sports. Tangled Up In School raises questions about how we draw the boundaries of the school, about how schools fit into the lives of children and cities, and about what we mean when we talk about "school."

Farthest North - Fridtjof Nansen 1898

In September of 1893, Norwegian zoologist Fridtjof Nansen and a crew manned the schooner Fram, intending to drift, frozen in the Arctic pack-ice, to the North Pole. When it became clear that they would

miss the pole, Nansen and his companion Hjalmar Johansen struck off by themselves. Racing the shrinking pack-ice, they attempted, by dog-sled, to go "farthest north." They survived a winter in a moss hut eating walrus and polar bears, and the public assumed they were dead. In the spring of 1896, after three years of trekking, and having made it to within four degrees of the pole, they returned to safety. Nansen's narrative stands with the best writing on polar exploration.
