Educating the Neoliberal Whole Child -

Bronwen MA Jones 2021-12-24

This book questions what 'educating the whole child' means in the context of our current neoliberal education system. In analysing the impact of how education policy is enacted and understood, it examines how this 'neoliberalisation' has shaped the personal and ethical relations of education. The book is unique in raising questions about the way in which a common and universally held truth about the importance and value of educating the whole child is conceptualised and articulated in education policy. Employing Foucault's concepts of bio power, governmentality, the dispositif and subjectivities, this book explores the importance of psy-scientific knowledge, systems of education governance and classroom practices in constructing a neoliberal whole child. It examines how government policy structures the relationship between the child, school and government and claims that current policy and

practice operate as forms of bio power that extends neoliberal governance to the emotional and moral life of the child. Educating the Neoliberal Whole Child will be of great interest to researchers, academics and students in the fields of education policy, sociology of education and critical pedagogy. It is also a valuable addition to studies of Foucault and education.

What Should Schools Teach? - Alka Sehgal Cuthbert 2021-01-07

The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions. What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach?* The blurring of distinctions between pedagogy and curriculum, and between

experience and knowledge, has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge (what to teach) and their own pedagogy (how to teach), and how both need to be informed by values of intellectual freedom and autonomy. This second edition includes new chapters on Chemistry, Drama, Music and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum, and on the relationship between the knowledge that children encounter at school and in their homes.

Viruses: A Very Short Introduction - Dorothy H. Crawford 2011-07-28

Viruses are big news. From pandemics such as HIV, swine flu, and SARS, we are constantly being bombarded with information about new lethal infections. In this Very Short Introduction Dorothy Crawford demonstrates how clever these entities really are. From their discovery and the unravelling of their intricate structures, Crawford demonstrates how these tiny parasites are by far the most abundant life forms on the planet. With up to two billion of them in each litre of sea water, viruses play a vital role in controlling the marine environment and are essential to the ocean's delicate ecosystem. Analyzing the threat of emerging virus infections, Crawford recounts stories of renowned killer viruses such as Ebola and rabies as well as the less known bat-borne Nipah and Hendra viruses. Pinpointing wild animals as the source of the most recent pandemics, she discusses the reasons behind the present

increase in potentially fatal infections, as well as evidence suggesting that long term viruses can eventually lead to cancer. By examining our lifestyle in the 21st century, Crawford looks to the future to ask whether we can ever live in harmony with viruses, and considers the ways in which we may need to adapt to prevent emerging viruses with devastating consequences.
