The Nurse Professional -
Deborah Dolan Hunt, PhD, RN
2014-10-24

“Nursing school did not adequately prepare me for this role” and “Why didn’t anyone tell me about this when I was a student?” are commonly heard complaints from new nurses during their first two “rite of passage” years following graduation. But this transition to professional practice—fraught with challenges, anxiety, triumphs, and tears—does not have to be so difficult. The Nurse

Professional helps novices prepare for their transition into a “real world” role from being a student through graduation, NCLEX success, job search, first job, and beyond. It is the only book to cover all of the steps that new nurses must take to ensure a smooth transition into the professional role. The author is a nurse educator and mentor with extensive experience in recruiting and orienting nurses. Dr. Hunt is also co-founder of the Nurse Advocacy Forum, providing advocacy, support, networking, professional development, leadership, and mentoring to students and new graduate nurses. She offers sound advice regarding the most current issues facing new nurses and practical strategies for obtaining a job of one’s choice, describes steps to take well before graduation to ensure a smooth transition to professional practice, and addresses the various indicators of academic achievement that are required for employment at some

nursing facilities. She also discusses the benefits of externships, internships, professional development, and networking, how to develop a winning portfolio, and how to successfully transition into professional practice. This book provides information on workplace bullying and how to deal with it; the importance of self-care, self-advocacy, and networking; writing a résumé; interview skills; and much more. "Top 10 Tips" in each chapter concisely highlight important topics. Samples of useful forms and documents are available in chapter appendices. A PowerPoint presentation and templates for role play/simulation scenarios for faculty use are also available. Key Features: • "Top 10 Tips" in chapters concisely highlight important topics • Samples of useful forms and documents are available in chapter appendices • Delivers specific, practical strategies and exercises for a successful transition and entry into practice • Written by an experienced nurse/educator

Intensive and Critical Care Medicine - José Besso

2009-11-21

The World Federation of Societies of Intensive and Critical Care Medicine (WFSIC-CM) has reached the age of maturity. Physicians, nurses, and many others associated with the field of Intensive and Critical Care Medicine will be coming from all corners of the world to Florence, Italy in August, 2009 to celebrate the 10th quadrennial congress. Every 4 years for the last 36 years, congresses in the magnificent venues of London (1973), Paris (1977), Washington (1981), Jerusalem (1985), Kyoto (1989), Madrid (1993), Ottawa (1997), Sydney (2001), and Buenos Aires (2005) have signified an ever-developing process which has

resulted in the four pillars of the field of Intensive and Critical Care Medicine, namely partnership, ethics, professionalism, and competence. The first pillar is based on a stronger interdisciplinary collaboration and a multi-professional partnership in the field of Intensive and Critical Care Medicine. In recent decades, professional activity in medicine has been regulated by well-defined, universal principles, such as the welfare of the patient, autonomy, social justice, and the patient-physician relationship. The second pillar, ethics, has offered welcomed assistance to all these principles in establishing an ethics curriculum.

The Nurses - Alexandra Robbins 2016-04-19

A New York Times bestseller.

“A funny, intimate, and often jaw-dropping account of life behind the scenes.”—People
Nurses is the compelling story of the year in the life of four nurses, and the drama, unsung heroism, and unique sisterhood of nursing—one of the world’s most important professions (nurses save lives every day), and one of the world’s most dangerous, filled with violence, trauma, and PTSD. In following four nurses, Alexandra Robbins creates sympathetic characters while diving deep into their world of controlled chaos. It’s a world of hazing—“nurses eat their young.” Sex—not exactly like on TV, but surprising just the same. Drug abuse—disproportionately a problem among the best and

the brightest, and a constant temptation. And bullying—by peers, by patients, by hospital bureaucrats, and especially by doctors, an epidemic described as lurking in the “shadowy, dark corners of our profession.” The result is a page-turning, shocking look at our health-care system.

Acute and Critical Care Clinical Nurse Specialists E-book - AACN 2007-07-04
2007 AJN Book of the Year Award Winner Acute and Critical Care Clinical Nurse Specialists: Best Practices presents the knowledge and tools the CNS needs to provide the best standards of practice and performance. It focuses on the role of the CNS in acute and critical care, emphasizing the relationship between critical care nursing, the patient, and the environment of care. Divided into 3 main sections, the framework of the book is based on the Scope and Standards of Practice for the Clinical Nurse Specialist in Acute and Critical Care and the AACN's synergy model. This book delivers up-to-date

information for today's health care along with practical tools for the CNS in acute and critical care settings. Provides a current guide for the CNS' role in acute and critical care for the most up-to-date information. Reader-friendly presentation of information provides an easy reference that can be used in day-to-day practice. Discussion questions based on the CCNS blueprint assist in review for the certification examination, making this book a seminal reference for nurses taking the CCNS certification examination. Case studies present applied learning of the acute and critical care setting to prepare the reader for real-life situations.

Critical Care Nursing - Patricia Gonce Morton 1998

This book is organized into five parts, the first two of which cover areas applicable to all critical care patients, including the patient's and family's experience, education, pain management, ethical and legal issues, and the rewards and challenges of critical care

nursing. The third part addresses specific populations, including pediatric patients, pregnant women, older adults, and postanesthesia patients, as well as interfacility transport. The balance of the book is arranged by body systems and concludes with multisystem problems. This is the seventh edition of a text first published in 1973 and last published in 1994. The purpose is to present current, comprehensive, and practical information built on a holistic perspective of care in which the patient is the core of nursing practice. This book meets a need for educating students and nurses in the critical care environment. The editors' objective of providing a framework for focusing on patient responses in the critical care environment is met. This book is intended for students in critical care, educators, and clinicians. This edition is also tailored to meet the needs of patients. The editors are excellent authorities in critical care nursing. All three are practitioners, and one is both practitioner and educator. The

contributors and reviewers are critical care experts. The illustrations are used best to understand critical care technology. The graphics used for anatomy, physiology, and patient assessment add to the usefulness of the text. The references are pertinent and current, but certain specialty content would need to be updated by the reader (e.g., medication protocols for CHF). The use of color in the text is managed carefully to guide and not overpower the reader. The 1997 ACLS Guidelines are in Appendix 1. The Answer Key to Study Questions appears in Appendix 2. Anatomy and physiology, patient assessment and clinical management, nursing research, collaborative plans of care, teaching, and home care issues are some of the innovations presented. One strength of book is how it addresses the changes associated with aging and the needs of the older adult. Aging concerns are covered in one chapter and are highlighted throughout the text. This edition provides current

information that makes the previous edition out of date. I would recommend this text for beginning critical care nurses and for undergraduate nursing students for its coverage of advanced pathophysiological concepts.

The Future of Nursing -

Institute of Medicine

2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex

health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession.

Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates.

Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit

of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Barriers and Facilitators to Research Utilization as Perceived by Critical Care Nurses - Jeffrey S. Ashley 2005

This study investigated barriers and facilitators to research utilization reported by practicing critical care nurses. The study aims were to describe barriers and facilitators to research utilization as perceived and experienced by critical care nurses and demographic influences on them. The sample (n = 511) was composed primarily of women (92%), mean age 46, who practiced in critical care for an average of 17.5 years. The study instruments were the BARRIERS Scale, the Research Utilization Implementation Project Questionnaire, Portions of the Orange County Research Utilization in Nursing Questionnaire, and demographic data form. A survey (cover letter and study instruments) was mailed to a random sample of members of the American Association of Critical-Care Nurses (n =

3000) who represented clinical nurses, nurse managers and clinical nurse specialists. The top ten barriers to research utilization were attributed to the setting (6), the nurses (Messmer, Jones, & Rosillo) and the presentation (1). Major facilitators identified by subjects related to collaborative behavior, access to research, and its applicability. More than half of the sample reported not participating in the implementation of research. Regardless of subjects' role or education, barriers associated with the setting remained the most prominent. Findings indicate the capacity of an organization to develop the infrastructure and capacity to access, translate, transfer and evaluate research in practice is a strategic and professional priority. Future research needs to address strategies that will explore consistent and conscientious use of research in practice and fostering environments of care that have the freedom to ask questions and the capacity to answer

them.

Using and Conducting Nursing Research in the

Clinical Setting - Magdalena A. Mateo 1999

An AJN Book of the Year in its previous edition, this resource thoroughly explores how to conduct and use research in a variety of clinical settings. It begins with an overview of how research is used in practice and how it affects quality assurance and clinical problem-solving. Then, it discusses practice outcomes, examines the forces influencing today's focus on outcomes, and provides guidelines for evaluating programs and avoiding pitfalls in data collection.
