Maritime Cybersecurity -

Steven D Shepard, PhD
2020-09-02

The maritime industry is thousands of years old. The shipping industry, which includes both ships and ports, follows practices that are as old as the industry itself, yet relies on decades-old information technologies to protect its assets. Computers have only existed for the last 60 years and computer networks for 40. Today, we find an industry with rich tradition, colliding with new types of threats, vulnerabilities, and exposures. This book explores cybersecurity aspects of the maritime transportation sector and the threat landscape that seeks to do it harm.

52 Prepper Projects - David Nash 2013-11-01

Are you and your family self-reliant? Will you be able to provide for them and keep them safe? The best way to prepare for the future is not through fancy tools and gadgets—it's experience and knowledge that will best equip you to handle the unexpected. Everyone begins somewhere, especially with disaster preparedness. In 52 Prepper's Projects, you'll find a project for every week of the year, designed to start you off with the foundations of disaster preparedness and taking you through a variety of projects that will increase your knowledge in self-reliance and help you acquire the actual know-how to prepare for anything. gaining the knowledge and skill sets that will make you better prepared for whatever life throws your way. 52 Prepper's Projects is the ultimate instructional guide to preparedness, and a must-have book for those with their eye on the future.

Post-Traumatic Stress Disorder

- Peter Shiromani 2009-03-06

Post-traumatic stress disorder is a psychiatric illness that can occur in anyone who has experienced a life-threatening or violent event. The trauma can be due to war, terrorism, torture, natural disasters, violence, or rape. In PTSD the brain areas that are likely to be affected are the hippocampus (memory), amygdala (fear association), the prefrontal cortex (cognitive processing), and the ascending reticular activating system (arousal). The chemical of interest is norepinephrine, which is released during a stressful event and is part of the fight-or-flight response meant to mobilize the body to action. The objective of this title is to outline the neurobiology of

post-traumatic stress disorder and provide treatment strategies for clinicians. The chapter material from this book has evolved from a seminar on PTSD held recently under the auspices of the VA Boston Healthcare System, Boston University Medical Center and Harvard Medical School. We propose a book that will focus on the epidemiology, neurobiology, MRI studies, animal models, arousal and sleep issues, clinical trials, and treatment strategies for clinicians. Treatment will cover such topics as guidelines for treating posttraumatic stress disorder, PTSD and the use of mental health services, cognitive intervention therapy, and large scale clinical trials in PTSD. This collection will be a vital source of information to clinicians and neuroscientists.

Bioactive Polymeric Systems - Charles G. Gebelein 2012-12-06

The vast array of libraries in the world bear mute witness to the truth of the 3000-year-old observation of King Solomon who stated " ... of making many books there is no end, and much study is a weariness of the flesh." Yet books are an essential written record of our lives and the progress of science and humanity. Here is another book to add to this huge collection, but, hopefully, not just another collection of pages, but rather a book with a specific purpose to aid in alleviating the "weariness of the flesh" that could arise from much studying of other journals and books in order to obtain the basic information contained herein. This book is about polymeric materials and biological activity, as the title notes. Polymeric materials, in the broad view taken here, would include not only synthetic polymers (e.g., polyethylene, polyvinyl chloride, polyesters, polyamides, etc.), but also the

natural macromolecules (e.g., proteins, nucleic acids, polysaccharides) which compose natural tissues in humans, animals and plants. In the broad sense used here, biological activity is any type of such action whether it be in medication, pest control, plant-growth regulation, and so on. In short, this book attempts to consider, briefly, the use of any type of polymeric material system with essentially any kind of biological activity.

[Access to Modern Energy Services for Health Facilities in Resource-constrained Settings](#)
- World Health Organization
2015

"This study is a joint effort by WHO, aimed at improving quality, safety and accessibility of health services in support of universal health coverage, and The World Bank in furtherance of the Energy Sector Management Assistance Program (ESMAP)-funded activity on Defining and Measuring Access to Energy for Socio-Economic Development. The WHO inputs are drawn from two years of

comprehensive review of energy use in the health sector as part of the Health in the Green Economy series, for which the preliminary findings were published in 2011 and the full report is to be published in 2015. The study also draws upon the framework for measuring energy access developed by the World Bank in consultation with partner agencies to track progress under the Sustainable Energy for All (SE4All) initiative."-- Publisher's description.

Robotics in Practice - Joseph F. Engelberger 2012-12-06
THE REAL THING by Isaac Asimov Back in 1939, when I was still a teenager, I began to write (and publish) a series of stories about robots which, for the first time in science fiction, were pictured as having been deliberately engineered to do their job safely. They were not intended to be creaky Gothic menaces, nor outlets for mawkish sentiment. They were

simply well-designed machines. Beginning in 1942, I crystallized this notion in what I called 'The Three Laws of Robotics' and, in 1950, nine of my robot stories were collected into a book, I, Robot. I did not at that time seriously believe that I would live to see robots in action and robotics becoming a booming industry ... Yet here we are, better yet, I am alive to see it. But then, why shouldn't they be with us? Robots fulfil an important role in industry. They do simple and repetitive jobs more steadily, more reliably, and more uncomplainingly than a human being could - or should. Does a robot displace a human being? Certainly, but he does so at a job that, simply because a robot can do it, is beneath the dignity of a human being; a job that is no more than mindless drudgery. Better and more human jobs can be found for human beings - and should.
