Learning and Understanding - National Research Council 2002-08-06

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as

what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Thinking Toward Survival - Coralie Koonce 2010-07

The clock approaches midnight. We humans have created a scary scenario for ourselves with Climate change * and other ecosystem failures * Population growth and consumption that exceeds Earth's carrying capacity * Out-of-control technologies and pollution * Ancient habits of war + Doomsday weapons + depleting resources + nationalism What we need is a whole new way of thinking. From protecting our grey matter, to changing 300-year-old paradigms, from self-reliance to trillion-dollar transitions, from how we raise our children to how to tame the corporations, Koonce offers potential solutions such as * Change our universities * Develop species-consciousness * Decentralize * Look for creative ideas and models across the world Humanity has what it takes to survive. There's no need to despair. But there is a burning need to get started on the transformation.

Theory of Knowledge - Eileen Dombrowski
2007-02-22

This book has been specifically designed to support the student of the IB Diploma Programme in Theory of Knowledge. It will stimulate students to think about learning and knowledge from their own and from others' perspectives in a way that crosses disciplines and cultures. It will encourage reflection, discussion, critical thinking, and awareness of the ways in which knowledge is constructed, and will lead students to recognize the implications of knowledge for issues of global concern. The book is rooted in classroom experience and provides class activities and supporting material for the whole of the TOK course.

Theory of Knowledge - Nicholas Alchin 2003

Completely mapped to the new 2013 syllabus.

Religion and Educational Research - David Käbisch 2019

Religious education is always a local or regional

practice. This is evident in the studies in the present volume on religion and education. The production and the transfer of knowledge in this field are particular and take place in certain historical contexts, so that both can be understood as historical processes. With regard to these theoretical assumptions, the authors of the present volume deliver case studies concerning religious education research in Germany, Ireland, Sweden, Argentina, as well as other countries. Several questions from these contributions might be relevant for further studies: Is religion being underrated in educational research? Is education, on the other hand, being underrated in religious studies? Do these questions depend on national traditions in educational as well as religious research? Are there transnational exchanges between countries through networks, guilds and media? And finally, what might be the additional benefits of such research compared to international comparative studies?

Credential Market - Quentin Maire 2021-09-22
This book makes an original contribution to credential sociology by analysing how high school certificates become and remain valuable in a context of mass high school participation (i.e. credentialism). offered in over 150 countries, Quentin Maire argues that the advent of new private credentials can be understood as a phenomenon of credential stratification in a context of intensified academic competition. Using original data on high school credentials in Australia and internationally, the author makes a strong case for certificates to be studied relationally, by locating them in the credentialing structures in which they are inserted. He systematically applies the comparative method to explain the role of the curriculum, family resources, school segregation and higher education selection in creating a credential hierarchy. His robust combination of theoretical construction and detailed empirical work allows him to offer new insights into social inequality in education systems, credential theory and the IB Diploma.

Supertest - Jay Mathews 2005

Recognized by universities throughout the world, the International Baccalaureate (IB) is a college entrance examination that students can take in any country. A school that adopts the IB curriculum ensures that its academics are brought up to international standards. Over 500

U.S. high schools currently participate in the International Baccalaureate program. As the IB concept gains ground with students, parents, and teachers in North America, Supertest tells two illuminating stories: how the IB program came to be and eventually reached the United States, and how it came to be implemented at Mount Vernon High in Alexandria, VA. The book provides insight into how ideas first conceived by a small group of educators in Switzerland eventually helped improve a typical American public school.
