Foundations of Reason and Morality -

Claudia Bickmann 2020-05-28

Mediality on Trial - Ehler Voss 2020-09-21

This volume addresses controversies connected to the testing of the capacities and potentials of mediums. Today we commonly associate the term "medium" with the technical communication between transmitters and receivers. Yet this term likewise applies to those who cooperate with agencies that exceed the presumed domain of the material world. Insofar as one presumes a division between distinctly opposed categories of religion and the secular, technical media tend to be associated with the secular and human (trance) mediums tend to be associated with religion after 1900. This volume concerns the ways in which the term medium still marks an overlapping of - and thus problematizes - the aforementioned division between religion and the secular, the personal and the technological. The term medium carries

with it a seed of doubt that is itself inseparable from investment in the medium's power: insofar as they communicate with an "other" realm, mediums offer the hope and promise of new possibilities and improved efficiency, and thus of a better life; yet they have simultaneously been under suspicion of altering (or even inventing) the messages they communicate. It is due to this combination of promise and suspicion that "mediumism" has tended to evoke scientific, religious, and moral controversies. Thus, we can speak of a "mediumistic trial" - that is, a process in which a medium is put to the test concerning its potentials and trustworthiness. Around 1800, experts were asked if a modern secular institution would be capable of inspiring, domesticating or excluding trance mediumship. This question has stayed with us ever since, and the answers have remained inconclusive. That is why the past and present of mediumship may be asked to elucidate each other.

The Explainability of Experience - Ursula Renz

This book reconstructs Spinoza's theory of the human mind against the backdrop of the twofold notion that subjective experience is explainable and that its successful explanation is of ethical relevance, because it makes us wiser, freer, and happier. Doing so, the book defends a realist rationalist interpretation of Spinoza's approach which does not entail commitment to an ontological reduction of subjective experience to mere intelligibility. In contrast to a long-standing tradition of Hegelian reading of Spinoza's Ethics, it thus defends the notion that the experience of finite subjects is fully real.

Taverna Lentas - Andreas Müller 2020-04-17

There seems to be a possibility of an instantaneous understanding or obviousness of what is being spoken here. It is not even something real, however, the apparent me might die in that obviousness. This book presents a stunning collection of quotes from Andreas talks in the magic Cretan village of Lentas.

Technology, Anthropology, and Dimensions of Responsibility - Birgit Beck 2020-02-19

“With great power comes great responsibility.”

In today's world, with our growing technological power and the knowledge about its impact, we are considered to be responsible for many instances that not long ago would have been deemed a matter of fate. At the same time, the looming options of, e.g., genome editing or neuroprosthetics, threaten traditional notions of responsibility if no longer the person but the technology involved is deemed to be responsible for a specific behaviour. The growing ethical debate on the expansion of human responsibility, e.g. when it comes to human-machine-interaction, ambient intelligence, or reproductive technologies, thus intertwines with the challenge to formulate an appropriate understanding of the concept of personal responsibility and our respective anthropological self-understanding in today's technological world. The volume brings together both

perspectives and aims at illuminating crucial dimensions of responsibility in light of technological innovation and our self-understanding as responsible beings.

Die Natur Der Lebensform - Martin Hähnel 2020

Der Band vereint aktuelle Beiträge, die sich mit der biologischen, anthropologischen, ontologischen und ethischen Dimension des Begriffs der Lebensform befassen. Das Buch gliedert sich in drei Teile. Der erste Teil ("Biologie und Anthropologie") widmet sich verschiedenen Verwendungsweisen des Begriffes "Lebensform" sowohl in der aristotelischen als auch zeitgenössischen Philosophie der Biologie. Der zweite Teil ("Ontologie") enthält Beiträge, die mittels des Lebensformkonzepts eine Ontologie des Lebens zu entwickeln beabsichtigen. Der dritte Teil ("Praktische Philosophie") behandelt die Frage, welche normativen Implikationen ein ontologisch-biologisch informierter Lebensformbegriff für die praktische Philosophie

hat.

Philosophy For Dummies - Tom Morris

2011-03-10

Discover how to apply ancient wisdom to your everyday life Philosophy at its best is an activity more than a body of knowledge. In an ancient sense, done right, it is a healing art. It's intellectual self-defense. It's a form of therapy. But it's also much more. Philosophy is map-making for the soul, cartography for the human journey. It's an important navigational tool for life that too many modern people try to do without. Philosophy For Dummies is for anyone who has ever entertained a question about life and this world. In a conversational tone, the book's author - a modern-day scholar and lecturer - brings the greatest wisdom of the past into the challenges that we face now. This refreshingly different guide explains philosophical fundamentals and explores some of the strangest and deepest questions ever posed to human beings, such as How do we know

anything? What does the word good mean? Are we ever really free? Do human beings have souls? Is there life after death? Is there a God? Is happiness really possible in our world? This book is chock full of all those questions you may have long wanted to think about and talk with someone about, but have never had the time or opportunity to tackle head on. Philosophy For Dummies invites you to discuss the issues you find in the guide, share perspectives, and compare thoughts and feelings with someone you respect. You'll find lots of material to mull over with your friends or spouse, including thoughts on When to doubt, and when to doubt our doubts The universal demand for evidence and proof The four dimensions of human experience Arguments for materialism Fear of the process of dying Prayers and small miracles Moral justification for allowing evil The ancient philosopher Socrates (fifth century, B.C.) thought that, when it comes to the Ultimate Questions, we all start off as dummies. But if we

are humbly aware of how little we actually know, then we can really begin to learn. Philosophy For Dummies will put you on the path to wising up as you steer through the experience called life. *Microsoft Teams For Dummies* - Rosemarie Withee 2020-03-19

Medieval Textual Cultures - Faith Wallis

2016-08-22

Understanding how medieval textual cultures
engaged with the heritage of antiquity
(transmission and translation) depends on
recognizing that reception is a creative cultural
act (transformation). These essays focus on the
people, societies and institutions who were
doing the transmitting, translating, and
transforming -- the "agents". The subject matter
ranges from medicine to astronomy, literature to
magic, while the cultural context encompasses
Islamic and Jewish societies, as well as
Byzantium and the Latin West. What unites

these studies is their attention to the
methodological and conceptual challenges of
thinking about agency. Not every agent acted
with an agenda, and agenda were sometimes
driven by immediate needs or religious
considerations that while compelling to the
actors, are more opaque to us. What does it
mean to say that a text becomes "available" for
transmission or translation? And why do some
texts, once transmitted, fail to thrive in their
new milieu? This collection thus points toward a
more sophisticated "ecology" of transmission,
where not only individuals and teams of
individuals, but also social spaces and local
cultures, act as the agents of cultural creativity.

Time- and Space-Efficient Self-Stabilizing Algorithms - Bernd Hauck 2013-01-08

Self-stabilization is a general approach to design a system to tolerate arbitrary transient faults.

This thesis presents new time- and space-efficient self-stabilizing algorithms for well-known problems in graph theory and provides new complexity analyzes for existing algorithms.

The main focus of this thesis is on the proof techniques used in the complexity analyzes and the design of the algorithms. Selbststabilisierung ist ein Ansatz, der ein verteiltes System in die Lage versetzt, beliebige transiente Fehler zu tolerieren. In dieser Dissertation werden neue selbststabilisierende Algorithmen für bekannte

graphentheoretische Probleme vorgestellt. Darüber hinaus werden bestehende Verfahren auf ihre Komplexität untersucht. Der Schwerpunkt dieser Arbeit liegt auf den Beweismethoden, die in der Komplexitätsanalyse benutzt werden, sowie auf dem Design der Algorithmen.

Algebras for Feature-Oriented Software Development - Andreas Zelend 2020-04-07

This book systematically presents the underlying mathematical structures and foundations of feature orientation in the fields of software development. New algebras are proposed and thorough investigations and discussions of their algebraic laws as well as insights on their practical applications are provided. Feature-oriented programming and feature-oriented software development have been established in computer science as a general programming paradigm that provides formalisms, methods, languages, and tools for building maintainable, customizable, and extensible software. Modal Logic - Herman Ruge Jervell 2013-01-16

In modal logic we discuss multiple perspectives on truth - perspectives as given by time, by provability, by knowledge, by agents or by processes. We develop the theory of modal logic and emphasize the connections with and applications within computer science and mathematics. Among other things we develop Kurt Godels incompleteness theorem and show memoryless determinacy of infinite games on finite arenas.

Journalism in Turkey: - Gökçen Basaran Ince 2020-07-13

Journalism in Turkey has an ambivalent characteristic. On the one hand, the social demand for genuine journalism has increased, and on the other hand, news has turned into a tool within the polluted political polarization atmosphere. In the age of fake news and post-

truth, practices of journalism in Turkey both contain significantly striking examples of how media professionals overcome the barriers and also give some clues about the changing nature of journalism. The book examines the deep crisis mainstream media experience in Turkey. New-born media institutions, alternatives, their start-up strategies, and transformation of journalism field are scrutinized by qualitative and quantitative methods. The book aims to present a current picture of journalism in Turkey by underlining both historical continuities and breaks from the tradition.

Towards a Vegan-Based Ethic - Micol Kates 2020-03-15

The book draws links between colonial and neo-colonial power structures which have sought to maintain hierarchies of dominance, resulting in cruel practices towards people at the bottom of the hierarchy and animals, who, in a colonial mindset, only exist for human gain. To counter these harm-based ideologies, and practices,

veganism, as an ethical movement, is seeking to give voice to all those who support animals, and the rights of animals, while also seeking to give a voice to animals themselves. Additionally, veganism seeks to challenge the old-guard power structures and cruel practices perpetuated by colonial and neo-colonial systems associated with the dominant Ego power structure. Vegan ethics represent a shift from the dominant Ego model of human relations represented by a pyramid of power towards an Eco model of human relationships in which all Beings have equal worth and agency.

Proof Theory - Herman Ruge Jervell 2013-01-16

In proof theory we investigate the objects used for computations and arguments in computer science and mathematics. Our starting point is the classical analysis given by Gerhard Gentzen in the 1930s. We develop this further using a new theory of ordinal notation and connecting this with combinatorics on finite trees.

[Echo on a Chip - Secure Embedded Systems in](#)

[Cryptography](#) - Mancy A. Wake 2020-04-17

Based on the historical development of so-called Crypto Chips, the current Transformation of Cryptography shows numerous changes, innovations and new process designs in the field of Cryptography, which also need to be integrated in a hardware design of Microprocessors and Microcontrollers for a Secure Embedded System. Using the example of the encrypting Echo protocol, a design of a hardware architecture based on three Chips is presented: The central Echo Chip #1 represents a "Trusted Execution Environment" (TEE), which is not connected to the Internet for the conversion processes from plain text to cipher text and is supposed to remain quasi original, to prevent software injections or possible uploads of copies of the plain text. The technical specifications of all three microprocessors are described in detail. The established paradigm of separation is recognized as a security feature and discussed as a perception for a Next

Generation of Microcontrollers in the field of Mobile Messaging under the technical term "Going the Extra Mile". This security architecture is then discussed in the context of seven different current risk cases with the consolidated result that the well-known OSI (Open Systems Interconnection) Model is expanded to the Secure Architecture Model, abbreviated SAM.

Invariant Features and Enhanced Speaker Normalization for Automatic Speech Recognition - Florian Müller 2013-01-31

Automatic speech recognition systems have to handle various kinds of variabilities sufficiently well in order to achieve high recognition rates in practice. One of the variabilities that has a major impact on the performance is the vocal tract length of the speakers. Normalization of the features and adaptation of the acoustic models are commonly used methods in speech recognition systems. In contrast to that, a third approach follows the idea of extracting features

with transforms that are invariant to vocal tract lengths changes. This work presents several approaches for extracting invariant features for automatic speech recognition systems. The robustness of these features under various training-test conditions is evaluated and it is described how the robustness of the features to noise can be increased. Furthermore, it is shown how the spectral effects due to different vocal tract lengths can be estimated with a registration method and how this can be used for speaker normalization.

Empirical Research and Normative Theory - Alexander Max Bauer 2020-04-20

Two questions often shape our view of the world. On the one hand, we ask what there is, on the other hand, we ask what there ought to be. Empirical research and normative theory, the methodological traditions concerned with these questions, entered a difficult relationship, from at least as early as around the time of the advent of modern sciences. To this day, there remains a

strong separation between the two domains, with both tending to neglect discourses and results from the other. Contrary to a verdict of strict segregation between "is" and "ought," there are, nowadays, various attempts to integrate both theoretical approaches. This calls for a discourse on the relation between empirical research and normative theory. In this volume, scholars from different disciplines - including psychology, sociology, economics, and philosophy - discuss the possible desired or undesired influences on, and limits of, the integration of these two approaches.

Going to the Dogs - Erich Kastner 2012-11-06
Going to the Dogs is set in Berlin after the crash of 1929 and before the Nazi takeover, years of rising unemployment and financial collapse. The moralist in question is Jakob Fabian, "aged thirty-two, profession variable, at present advertising copywriter . . . weak heart, brown

hair," a young man with an excellent education but permanently condemned to a low-paid job without security in the short or the long run. What's to be done? Fabian and friends make the best of it—they go to work though they may be laid off at any time, and in the evenings they go to the cabarets and try to make it with girls on the make, all the while making a lot of sharp-sighted and sharp-witted observations about politics, life, and love, or what may be. Not that it makes a difference. Workers keep losing work to new technologies while businessmen keep busy making money, and everyone who can goes out to dance clubs and sex clubs or engages in marathon bicycle events, since so long as there's hope of running into the right person or (even) doing the right thing, well—why stop? Going to the Dogs, in the words of introducer Rodney Livingstone, "brilliantly renders with tangible immediacy the last frenetic years [in Germany] before 1933." It is a book for our time too.

Experiments in Ethics - Kwame Anthony Appiah 2010-03-30

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics.

Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of “experimental philosophy,” provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

Humean Libertarianism - Marius Backmann

2013-05-02

What does it mean for an agent to be free? Is determinism true? What are laws of nature? This book deals with the interconnections between these questions. Backmann argues for the view that libertarianism can be reconciled with determinism. In order to reach this goal, libertarianism – classically defined as an incompatibilist theory of free will – is defined as the thesis that at the time of decision, the agent must be able to choose between alternative courses of action. Backmann claims that this notion of libertarianism can be reconciled with determinism provided that determinism is understood in a Humean fashion, i.e. backed by a Humean theory of laws of nature. The resulting view – Humean Libertarianism – is an intermediate position between classical compatibilism and incompatibilism.

Hack your business growth the scientific way
Airbnb. Uber. Spotify. To join the big fish in the disruptive digital shark tank you need to get beyond siloed sales and marketing approaches. You have to move ahead fast—with input from your whole organization—or die. Since the early 2010s, growth hacking culture has developed as the way to achieve this, pulling together multiple talents—product managers, data analysts, programmers, creatives, and yes, marketers—to build a lean, mean, iterative machine that delivers the swift sustainable growth you need to stay alive and beat the competition. Growth Hacking for Dummies provides a blueprint for building the machine from the ground-up, whether you're a fledgling organization looking for ways to outperform big budgets and research teams, or an established business wanting to apply emerging techniques to your process. Written by a growth thought leader who learned from the original growth hacking gurus, you'll

Networks of Learning - Sita Steckel 2014

Cultures of learning and practices of education in the Middle Ages are drawing renewed attention, and recent approaches are questioning the traditional boundaries of

institutional and intellectual history. The volume assembles contributions on both Byzantine and Latin learned culture, and aims to locate medieval scholars in their religious and political contexts instead of studying them in a framework of 'schools'. Eleven contributions on eastern and western scholars offer complementary perspectives on scholars and their work, discussing the symbolic and discursive construction of religious and intellectual authority, practices of networking and adaptations of knowledge formations. Sita Steckel is Junior Professor of Medieval History at the University of Munster and author of a study on 'cultures of teaching' in the early and high middle ages. Niels Gaul is Associate Professor of Byzantine Studies at CEU Budapest, with an interest in Byzantine scholarship, especially the societal functions of rhetoric. Michael GrÄ¼nbart is Associate Professor of Byzantine Studies at the University of Munster. He is currently working on the image of

Byzantine aristocracy and preparing an introduction to the function of letters and words in Byzantine daily life.

Purposiveness of nature in Kant's third critique - Menting, Thijs 2020

Diese Studie verfolgt das Ziel, eine transzendente Interpretation der Kritik der Urteilskraft von Immanuel Kant vorzulegen, welche sowohl den Zusammenhang mit den anderen kritischen Werken, als auch die interne Kohärenz des Buches berücksichtigt. Ich bezeichne die Interpretation als transzendental, weil das neu eingeführte Erkenntnisvermögen, nämlich die reflektierende Urteilskraft, zusammen mit seinem a priori Prinzip der Zweckmäßigkeit in den Fokus gerückt wird. Dies sollte es erlauben, die scheinbare Vielfalt der Themen (von ästhetischen Urteilen über Kultur bis hin zu teleologischen Urteilen über Naturzwecke), welche viele Interpreten in die Irre geführt hat, ausschließlich in Abhängigkeit dieses Erkenntnisvermögens und des

entsprechenden transzendentalen Prinzip zu untersuchen. Auf diesem Weg wird nicht nur beabsichtigt, die Zugehörigkeit der Kritik der Urteilskraft zum transzendentalen Projekt Kants nachzuweisen, sondern außerdem auch das Prinzip der Zweckmäßigkeit in unserem reflexiven Verhältnis zur Natur zu etablieren. Der wichtigste Beitrag dieser Studie besteht darin, die Kritik der Urteilskraft in das größere kritische Projekt einzuordnen. Ich habe argumentiert, wie das Bedürfnis für die Voraussetzung der reflektierenden Urteilskraft aus dem eigentümlichen Charakter unseres sinnlichen und diskursiven Gemüts folgt. Da wir ein sinnliches und diskursives Gemüt haben, verfügen wir nicht über einen unmittelbaren Einblick in alle Merkmale der Gegenstände der empirischen Natur. Die eigentümliche Beschaffenheit unseres Gemüts erfordert begriffliche Vorstellungen, die sich mittelbar auf Objekte beziehen. Das Prinzip der Zweckmäßigkeit, nämlich die Voraussetzung,

dass die Natur unserem Gemüt angemessen organisiert ist, ist eine notwendige Bedingung für die Möglichkeit der Reflexion auf die empirischen Merkmale der Natur. Reflexion verweist in meinem Ansatz auf den Prozess der Auswahl von Merkmal für eine Klassifizierung, einschließlich die Reflexion auf die Methode, Mittel und Kriterien. Anstatt einen Beitrag zur Erkenntnis drücken Reflexionsurteile also Unwissenheit bezüglich der Intention hinter dem Entwurf der Natur, wie Geschmacksurteile und teleologische Urteile über organisierte Materie, am deutlichsten aus. So betrachtet hängt Reflexion, egal ob sie sich in Begriffsbildung, wissenschaftlicher Systematisierung, Geschmacksurteilen oder teleologischen Urteilen über organisierte Materie ausdrückt, von einem eigenen Prinzip der reflektierenden Urteilskraft ab, das in einer transzendentalen Untersuchung in der Kritik der Urteilskraft dargestellt und begründet wird. This dissertation aims to deliver a transcendental interpretation of Immanuel

Kant's *Kritik der Urteilskraft*, considering both its coherence with other critical works as well as the internal coherence of the work itself. This interpretation is called transcendental insofar as special emphasis is placed on the newly introduced cognitive power, namely the reflective power of judgement, guided by the a priori principle of purposiveness. In this way the seeming manifold of themes, varying from judgements of taste through culture to teleological judgements about natural purposes, are discussed exclusively in regard of their dependence on this faculty and its transcendental principle. In contrast, in contemporary scholarship the book is often treated as a fragmented work, consisting of different independent parts, while my focus lies on the continuity comprised primarily of the activity of the power of judgement. Going back to certain central yet silently presupposed concepts, adopted from previous critical works, the main contribution of this study is to

integrate the KU within the overarching critical project. More specifically, I have argue how the need for the presupposition by the reflective power of judgement follows from the peculiar character of our sense-dependent discursive mind. Because we are sense-dependent discursive minds, we do not and cannot have immediate insight into all of nature's features. The particular constitution of our mind rather demands conceptually informed representations which mediately refer to objects. Having said that, the principle of purposiveness, namely the presupposition that nature is organized in concert with the particular constitution of our mind, is a necessary condition for the possibility of reflection on nature's empirical features. Reflection refers on my account to a process of selecting features in order to allow a classification, including reflection on the method, means and selection criteria. Rather than directly contributing to cognition, like the categories, reflective judgements thus express

our ignorance when it comes to the motivation behind nature's design, and this is most forcefully expressed by judgements of taste and teleological judgements about organized matter. In this way, reflection, regardless whether it is manifested in concept acquisition, scientific systematization, judgements of taste or judgements about organized matter, relies on a principle of the power of judgement which is revealed and justified in this transcendental inquiry.

and how real journalists perform their jobs. The book begins with the basics of how to critically assess news stories, then covers what to look for in everything from community news and crime reporting to business, political and investigative coverage. More than 50 professional journalists share insights on how they gather, edit and report news, and discuss what critical audiences should expect from their news coverage. Students learn how to analyze complex topics including science, environmental and education news, and a series of chapters covers how to approach news from different parts of the world. Navigating the News is aimed at general audiences, not just journalism or communication majors. Given the importance and timeliness of the subject, this book could easily be the core text for general education classes on news and media literacy. The trend toward teaching young people how to understand and assess news is gaining momentum at universities everywhere. The book is written in a clear, straightforward

style to engage students who may be getting their first taste of adult issues and concerns. Even students who have avoided "serious" news growing up will gain tools for understanding, assessing and processing coverage of complex stories. The mission of this text is simple: If students don't recognize what real news is, Navigating the News is going to teach them. [Handbook of Nanocomposite Supercapacitor Materials III](#) - Kamal K. Kar 2021-05-27

This book covers the selection of nanocomposite supercapacitor materials. It describes the most important criteria behind the selection of materials for the electrode, electrolytes, separator and current collectors, which comprise the key components of supercapacitors for advanced energy storage. It discusses the influence on each material on the unique electrochemical properties of nanocomposite supercapacitors with respect to their energy storage mechanism and stability under extreme and unpredictable conditions. This book is part

of the Handbook of Nanocomposite Supercapacitor Materials. Supercapacitors have emerged as promising devices for electrochemical energy storage, playing an important role in energy harvesting for meeting the current demands of increasing global energy consumption. The handbook covers the materials science and engineering of nanocomposite supercapacitors, ranging from their general characteristics and performance to materials selection, design and construction. Covering both fundamentals and recent developments, this handbook serves a readership encompassing students, professionals and researchers throughout academia and industry, particularly in the fields of materials chemistry, electrochemistry, and energy storage and conversion. It is ideal as a reference work and primary resource for any introductory senior-level undergraduate or beginning graduate course covering supercapacitors.

Practicing Positive Psychiatry - Fredrike Bannink

2020-08

A practical guide to a positive psychiatry of the future! A highly practical book for all mental health professionals wanting to know how to apply positive psychiatry into their daily work. Positive psychiatry is the science and practice of psychiatry and clinical psychology that seeks to understand and promote well-being among people who have or are at high risk of developing mental illnesses. In this new approach, the person takes center stage, not the disease, and the focus is not only on repairing the worst, but also on creating the best in our patients. The authors from the fields of medicine and clinical psychology present over 40 applications and many cases and stories to illustrate the four pillars of positive psychiatry: positive psychology, solution-focused brief therapy, the recovery-oriented approach, and nonspecific factors. This book shows how mental health professionals can significantly increase patient collaboration to co-create preferred

outcomes through discovering possibilities, and competences and through building hope, optimism, and gratitude. Essential reading for psychiatrists, clinical psychologists, other professionals working in the field of mental

health care as well as students who want to take a positive focus to make psychiatry faster, lighter, and yes, more fun. We have high hopes that positive psychiatry will become a firm part of the psychiatry of the future.
