A Family of Preconditioned Iterative Solvers for Sparse Linear Systems - Ulrike Meier Yang 1995
Abstract: "Based on the relationship between the family of Broyden methods and the EN method, a new family of iterative methods, the family of EN-like methods, is developed and analyzed. These methods are shown to be related to a variety of other known methods, which comprise the Broyden methods, GCR, GMRES, Newton's method for approximating the inverse, and a combination of a Galerkin step followed by a step of Richardson's method. Scaling-invariant versions and implementations of higher efficiency are developed, and their complexity is examined. The convergence of the new methods, as well as their restarted and truncated versions, are examined. Various convergence results are derived, which include termination within a finite number of steps and estimates for residuals and errors. The methods are also shown to be suitable in the context of inner/outer iteration schemes, and, for two of the methods, orthogonality preserving inner/outer iteration schemes are developed. Adaptive versions, which are a combination of truncated and restarted versions, and which automatically increase the size of the Krylov subspace, are included in the software package PARASPAR, which achieves robustness by reevaluating a parametrized preconditioner whenever poor convergence or instability is encountered. We present numerical experiments that demonstrate the efficiency of several members of this new family in comparison with other known methods, in the context of PARASPAR, and in the context of inner/outer iteration schemes. The experiments show that even though methods like CGS and BiCGSTAB may converge faster for many problems, EN-like methods are in general more robust, since, like GMRES, they have the option of increasing the size of the Krylov subspace. Additionally, they often require less memory than GMRES or ORTHOMIN. They are also very suitable as iterative solvers inside PARASPAR, since they evaluate, without additional cost, parameters that estimate the quality of the preconditioner. Some EN-like methods also show drastic divergence when applied to an ill-conditioned problem. Consequently, it is possible to quickly recognize when to reevaluate [sic] the preconditioner. Finally, nonlinear EN-like methods are developed, and their convergence behavior is investigated."

[Gears and Gear Drives - Damir T. Jelaska 2012-08-23](#)

Understanding how gears are formed and how they interact or 'mesh' with each other is essential when designing equipment that uses gears or gear trains. The way in which gear teeth are formed and how they mesh is determined by their geometry and kinematics, which is the topic of this book. Gears and Gear Drives provides the reader with comprehensive coverage of gears and gear drives. Spur, helical, bevel, worm and planetary gears are all covered, with consideration given to their classification, geometry, kinematics, accuracy control, load capacity and manufacturing. Cylindrical gear geometry is the basis for dealing with any gear drives, so this is covered in detail. Key features: Contains hundreds of 2D and 3D figures to illustrate all types of gears and gear drives, including planetary and worm gears Includes fundamental derivations and explanations of formulae Enables the reader to know how to carry out accuracy control and load capacity checks for any gear drive Includes directions for the practical design of gears and gear drives Covers DIN and ISO standards in the area Gears and Gear Drives is a comprehensive reference for gears and gear drive professionals and graduate students in mechanical engineering departments and covers everything important to know how to design, control and manufacture gear drives.

Учебник шахматной тактики и стратегии - Николай Калиниченко 2022-04-29

Новый фундаментальный труд гроссмейстера Калиниченко, автора более 50 шахматных книг, призван заполнить пустующий сектор универсальных учебников для шахматистов, преодолевших начальный уровень. Рынок шахматной литературы предлагает много учебников для начинающих, но для шахматистов следующего уровня развития практически ничего нет. За неимением единой книги шахматистам приходится пользоваться различными статьями, специальными брошюрами, тематическими сборниками и пр. Книга в своих двух частях объединяет важнейшие аспекты шахматной борьбы: тактику и стратегию. Она содержит почти две тысячи диаграмм, тысячи примеров и заданий, на ее внимательное изучение может потребоваться много времени, но в процессе работы будет расти и шахматное мастерство читателя. Более тысячи упражнений по тактике не только принесут удовольствие в процессе их решения, но и быстро повысят практические результаты читателя. Объемная часть, посвященная стратегии, содержит как разбор общих вопросов стратегической борьбы, так и конкретные стратегические приемы. Специальные упражнения помогут читателю закрепить теоретический материал. Книга нацелена в первую очередь на повышение мастерства широкого круга шахматистов.

Chart No. 1 - Nima 2010

Chart Number One is essential to correct and accurate use of nautical charts. More than a chart, it is a book that defines the symbols, abbreviations and terms used on charts. It also provides important information about buoys, light visibility (range) and aids to navigation. This new and improved edition from Paradise Cay is a complete and accurate high quality reproduction of information provided by NOAA and NIMA.

Tractates Šabbat and 'Eruvin - Heinrich W. Guggenheimer 2012-07-04

This volume of the Jerusalem Talmud publishes the first twotractates of the Second Order, Šabbat and 'Eruvin. These tractates deal with discussion of all regulations regarding Shabbat, the weekly day of rest, including the activities prohibited on Shabbat. The tractate 'Eruvin covers questions of definition of what is allowed to do on Shabbat. The Second Order is the last one to be published in Heinrich W. Guggenheimer's edition of the Jerusalem Talmud.

Nutrient Acquisition by Plants - Hormoz BassiriRad 2005-05-20

This is an integrated review of the mechanisms controlling plant nutrient uptake and how plants respond to changes in the environment. Among key topics covered are: soil nutrient bioavailability; root responses to variations in nutrient supply; nitrogen fixation; root architecture; life span; mycorrhizae; responses to climate change. The book helps us understand the mechanisms that govern present-day plant communities and to predict the response of plants to a changing climate.

Gaussian Self-Affinity and Fractals - Benoit Mandelbrot 2002

This third volume of the Selected Works focusses on a detailed study of fraction Brownian motions. The fractal themes of "self-affinity" and "globality" are presented, while extensive introductory material, written especially for this book, precedes the papers and presents a number of striking new observations and conjectures. The mathematical tools so discussed will be valuable to diverse scientific communities.
