The Hack Mechanic Guide to European Automotive Electrical Systems - Rob Siegel 2016-06-27

Electrical issues in European cars can be intimidating. The Hack Mechanic Guide to European Automotive Electrical Systems shows you how to think about electricity in your car and then take on real-world electrical problems. The principles discussed can be applied to most conventional internal-combustion-engined vehicles, with a focus on European cars spanning the past six decades. Drawing on The Hack Mechanic's wisdom and experience, the 38 chapters cover key electrical topics such as battery, starter, alternator, ignition, circuits, and relays.

Through a practical and informal approach featuring hundreds of full-color illustrations, author Rob Siegel takes the fear-factor out of projects like making wire repairs, measuring voltage drops, or figuring out if you have a bad fuel pump relay. Essential tools such as multimeters (DVOM), oscilloscopes, and scan tools are discussed, with special attention given to the automotive multimeter needed to troubleshoot many modern sensors. You'll get step-by-step troubleshooting procedures ranging from safely jump starting a battery to diagnosing parasitic current drain and vehicle energy diagnosis. And you'll find detailed testing procedures for most problematic electrical components on your European car such as oxygen sensors, crankshaft and camshaft sensors, wheel speed sensors, fuel pumps, solenoids, and actuators. Reading wiring diagrams and decoding the German DIN standard are also covered. Whether you are a DIY mechanic or a professional technician, *The Hack Mechanic Guide to European Automotive Electrical Systems* will increase your confidence in tackling automotive electrical problem-solving. This book applies to gasoline and diesel powered internal combustion engine vehicles. Not intended for hybrid or electric vehicles.

Foundations of Marketing - John Fahy 2012-01-01

Foundations of Marketing, Fourth Edition, is a fully revised and updated edition of the highly successful text by John Fahy and David Jobber. Devised to offer comprehensive coverage for a short course in marketing, *Foundations of Marketing* retains its concise twelve chapter structure. The book offers a rigorous but accessible introduction, covering the core marketing curriculum in an engaging style that routinely demonstrates how marketing affects our everyday lives, considering both the decisions we make as consumers, and decisions marketing professionals would make in response to their customers. Fully revised and updated, this edition offers a closer focus on the value of marketing and its impact. The new edition also takes a more critical approach that questions and engages with current debates. Topic highlights of the fourth edition include widespread coverage of the huge impact of social media on the sphere of marketing, a fresh look at new techniques of marketing research used in real organizations, and a contemporary perspective on the growing service segment of the world economy. Bang up to date with new cases and examples, the book covers European examples from all corners of the region, including Germany, Sweden, Denmark, France, Switzerland, the UK and Ireland, without ignoring the prevalence of US and global brands in contemporary culture. The book retains the popular *Marketing Spotlight* and *Marketing in Action* features, showcasing brands as diverse as Lady Gaga, Guinness and Gap. New Social Media boxes cover LinkedIn, Facebook, Groupon and more. The fourth edition's case studies are all new, featuring brands from varying segments and countries, including H and M, Subway, Carlsberg, Rolex and Jamie Oliver. The new edition is supported by a superlative resource package to support lecturers and students, with exciting new videos linked to the case material, case and tutorial support and the integration of McGraw-Hill's Connect learning solution. Connect offers gradeable interactive

activities, cases, self study quizzes, and a variety of tools to help students to master their marketing module.

Entity-Oriented Search - Krisztian Balog 2018-10-02

This open access book covers all facets of entity-oriented search—where “search” can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an

understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.
