Aristotle and Atlantis - Thorwald C. Franke 2012-10-15

Aristotle considered Plato's Atlantis to be an invention; so we read time and again - but is this really true? Until the late 19th century, academia still held the opposite opinion. How did this shift in opinion take place? And was it justified? Over 100 works from the Atlantis and Aristotle literature, from antiquity to the Renaissance, from the 18th to the 21st century, were examined in order to track down the truth. A scientific adventure regarding Aristotle's opinion about Atlantis unfolds step by step, starting 200 years ago and reaching into the present. What did the great philosopher and disciple of Plato really think? All the relevant passages from Aristotle's works as well as all the steps taken during the literary research are documented in the appendix.

Advanced Rally Training - Mary Simpson 2018-02-20

In Novice Rally obedience, the handler and dog learned how to work as a team to navigate a course with numbered signs indicating different exercises to perform. Now they are ready to move to Advanced Rally.

This is the second level of Rally obedience, which includes more difficult

exercises throughout the course. At this level, all exercises are performed off-leash. There is a requirement of 12-17 stations with no more than seven stationary exercises. The exercises include a jump as well as calling your dog to the front of you instead of to a heel position. Again, unlimited communication from the handler to the dog is encouraged. No treats or toys are allowed. Handlers are permitted to talk, praise, encourage, clap their hands, pat their legs, or use any verbal means of encouragement. However, the handler may not touch the dog or make physical corrections. Loud or harsh commands or intimidating signals any time during the performance will be penalized. The dog and handler team moves continuously at a brisk but normal pace. The dog is to be under control at the handler's left side. There should be a sense of teamwork between the dog and handler throughout the course. The orders "Are you ready?" and "Forward" are given to the handler who has entered the ring. After the judge gives the "Forward" order, the team is on its own to correctly complete the entire sequence of numbered signs. All dogs and handlers begin with a perfect score of 100. A dog and handler team is awarded a qualifying score if the team retains at least 70 points at the completion of the course. This journal is intended to help make training as enjoyable and stress-free as possible. The first page for each week is designed to cover the class itself. The remaining six days allow you to determine what your goal is for that day's practice, what you actually achieve, and any questions or concerns you may wish to bring up at the next class. Also included is a course planner where you can list the information about each class: date, time, location, and so forth. There is a checklist where you can make notes on what you need to get and what to take to classes. The first page of each week is designed to cover the class itself. Rambles in Search of Wild Flowers, and how to Distinguish Them - Margaret Plues 1864

30-Second Philosophies - Stephen Law 2010-08-05

A full-colour illustrated tour through philosophy's most famous - and most mind-bending - ideas I Think Therefore I Am, Existentialism, Dialectical Materialism? The Socratic Method and Deconstruction? Sure, you know what they all mean. That is, you've certainly heard of them. But do you know enough about them to join a dinner party debate or dazzle the bar with your knowledge? 30-SECOND PHILOSOPHIES takes a revolutionary approach to getting a grip on the 50 most significant schools of philosophy. The book challenges leading thinkers to quit fretting about the meaning of meaning for a while and explain the most complex philosophical ideas - using nothing more than two pages, 300 words, and a metaphorical image. Here, in one unique volume, you have the chance to pick the potted brains of our leading philosophers and understand complex concepts such as Kant's Categorical Imperative without ending up in a darkened room with an ice pack on your head. [Dog Sport Skills, Book 1](#) - Denise Fenzi 2013-08-15

This is the first book in the award winning "Dog Sports Skills" series. This first book will focus on developing a competition dog sports foundation based in engagement and relationship. It doesn't matter what genetic package or temperament your dog is born with; you can bring out the best in your dog! To train your dog, you must develop a relationship that encourages a willing and happy attitude with natural focus while eliminating undue stress in both training and competition. If your goal is to create a world-class, enthusiastic performance dog, then this book is for you! We can help you refine your engagement and relationship skills to a higher level. If you are an instructor who is struggling with your novice students or less focused dogs, then this book is for you! You will find advice on how to work with a range of canine temperaments. If you have a dog who works well at home but you can't seem to maintain that connection in public, then this book is for you, too!

You will learn the basics of recognizing stress, paying attention to your dog, and alleviating or minimizing problems so that you can focus on work rather than worry. Finally, if you simply want to take the dog you have, your personal pet, and enjoy your training at a more fulfilling level, then this book is for you as well. By understanding and applying excellent engagement and relationship building techniques, both you and your canine companion will find more enjoyment in the training process, even if you choose never to step foot inside a competition ring. The chapters will cover relationship (what it is and how to get it), stress (recognizing it and techniques for lessening its impact), developing focus, explaining and evaluating positive methods for getting behaviors, and the use of trick training to develop a handler's training skills and a dog's mental and physical flexibility.

Free Will, Causality and the Self - Atle Ottesen Sørvik 2016-09-12
A major goal for compatibilists is to avoid the luck problem and to include all the facts from neuroscience and natural science in general which purportedly show that the brain works in a law-governed and causal way like any other part of nature. Libertarians, for their part, want to avoid the manipulation argument and demonstrate that very common and deep seated convictions about freedom and responsibility are true: it can really be fundamentally up to us as agents to determine that the future should be either A or B. This book presents a theory of free will which integrates the main motivations of compatibilists and libertarians, while at the same time avoiding their problems. The so-called event-causal libertarianism is the libertarian account closest to

compatibilism, as it claims there is indeterminism in the mind of an agent. The charge of compatibilists, however, is that this position is impaired by the problem of luck. This book is unique in arguing that free will in a strong sense of the term does not require indeterminism in the brain, only indeterminism somewhere in the world which there plausibly is.

Kundalini-Yoga-Parampara - Reinhard Gammenthaler 2020-01-28

The Practice of Knowing and Knowing in Practices - Bengt Molander 2015-10-08

This book is a philosophical analysis of knowledge in practices, focused on knowing how, tacit knowledge and expert knowledge. "Knowing in action" is the key concept. It covers understanding, well-functioning routines as well as successful learning processes. It is argued that

knowledge-in-action is more basic than propositional or theoretical knowledge. Key notions are knowing as a kind of "attentiveness" or a way of "being in the world," knowing as "continued learning," and knowledge as "what leads" people "in the best way." The book is a contribution to the contemporary philosophical discussions about knowing how, tacit knowledge and expert knowledge. At the same time, it is written as an interdisciplinary and case-based introduction to the epistemology of knowing and learning.

Synchronicity as Transpersonal Modality - Morten Frederiksen 2016-06-08

Morten Frederiksen explores Carl Gustav Jung's elusive notion of synchronicity from a transrational perspective and relates synchronicity to the transpersonality of the "All-One". This is done by expanding the content and meaning of Wolfgang Dietrich's layers of Elicitive Conflict Mapping (ECM) through re-relating them to Ken Wilber's model of the structures of consciousness; with synchronicity as the literal connecting principle. The result, then, is an expanded notion of the transrational peace philosophy which includes Wilber's model of stages shorn of its evolutionary slant and fathoms synchronicity in its theoretical outlook and practical application.

Talking About Numbers - Katharina Felka 2016-08

For thousands of years philosophers have discussed the question of whether numbers exist. Surprisingly, there are very easy arguments from commonly accepted truths that seem to decide the question. For instance, it is a commonly accepted truth that Obama has two hands. If Obama has two hands, then the number of Obama's hands is two, and, thus, numbers exist. If such arguments were convincing, ontological disputes about the existence of numbers could be decided simply by pointing to Obama's hands! The book offers a defense of the profoundness of traditional ontological questions by showing that the easy arguments in question are based on false linguistic assumptions. To do so it engages with recent linguistic research and develops analyses of the pertinent sentences that are of interest far beyond the metaontological question at hand.

Excerpt from the Doctrine of Reason - Georg Friedrich Meier
2016-01-28

First published in 1752, Excerpt from the Doctrine of Reason [Auszug aus der Vernunftlehre] was written as a textbook and widely adopted by many 18th-century German instructors, but most notably by Immanuel Kant. For forty years Kant used the Excerpts as the basis of his lectures on logic making extensive notes on his copy of the text. More than a text on formal logic, Excerpt from the Doctrine of Reason covers epistemology and the elements of thought and language Meier believed made human understanding possible. Working across the two dominant intellectual forces in modern philosophy, the rationalist and the empiricist traditions, Meier's work was also instrumental to the introduction of English philosophy into Germany; he was among the first German philosophers to study John Locke's philosophy in depth. This complete English translation of Meier's influential textbook is introduced by Riccardo Pozzo and enhanced by a glossary and a concordance

correlating Meier's arguments to Kant's logic lectures, the related *Reflexionen* and the *Jäsche Logic of 1800* - the text considered of fundamental importance to Kant's philosophy. For scholars of Kant, Locke and the German Enlightenment, this valuable translation and its accompanying material presents the richest source of information available on Meier and his 18th-century work.

Click The Buy Button At The Bottom Of The Page To Begin **Prolegomena to a Science of Reasoning** - Charles S. Peirce 2015-12-16

Charles Sanders Peirce (1839-1914), American Scientist, Mathematician, and Logician, developed much of the logic widely used today. Using copies of his unpublished manuscripts, this book provides a comprehensive collection of Peirce's writings on Phaneroscopy and the outlines of his project to develop a Science of Reasoning. The collection is focused on three main fields: Phaneroscopy, the science of observation, Semeiotic, the science of sign relations, and Logic, the science of inferences. Peirce understands all thought to be mediated in and through signs and its essence to be diagrammatic. The book serves as a timely contribution for the introduction of Peirce's Phaneroscopy to the emerging research field of Image Sciences.

Underwater Dogs - Seth Casteel 2012-10-23

The exuberant, exhilarating photographs of dogs underwater that have

become a sensation From the water's surface, it's a simple exercise: a dog's leap, a splash, and then a wet head surfacing with a ball, triumphant. But beneath the water is a chaotic ballet of bared teeth and bubbles, paddling paws, fur and ears billowing in the currents. From leaping Lab to diving Dachshund, the water is where a dog's distinct personality shines through; some lounge in the current, paddling slowly, but others arch their bodies to cut through the water with the focus and determination of a shark. In more than eighty portraits, award-winning pet photographer and animal rights activist Seth Casteel captures new sides of our old friends with vibrant underwater photography that makes it impossible to look away. Each image bubbles with exuberance and life, a striking reminder that even in the most loveable and domesticated dog, there are more primal forces at work. In *Underwater Dogs*, Seth Casteel gives playful and energetic testament to the rough-and-tumble joy that our dogs bring into our lives.

Viscosity of Pure Organic Liquids and Binary Liquid Mixtures -

Christian Wohlfarth 2016-08-20

The present volume comprises data on viscosities of non-electrolyte systems, containing pure organic liquids and binary liquid mixtures at normal pressure. Production, transportation and use of liquid materials directly depend on their physical features, among which their viscosities play a key role. Travelling through a pipe, drying out of a building material, dispensing a fluid into packaging are just few examples of how important reliable data on liquid viscosities are. The data present viscosities as a function of temperature and - for binary mixtures - of composition at normal pressure.

A subsequent human revision was done primarily in terms of content, so that the book will read stylistically different from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Carl Jung - Paul Bishop 2014-03-15

Swiss-born Carl Gustav Jung (1875–1961) was one of the pioneers of psychology, largely responsible for the introduction of now-familiar psychological terms such as “introvert,” “extrovert,” and “collective unconscious.” But in spite of this, Jung has often remained on the fringes of academic discourse. Seeking to understand Jung in view of not only his life, but also in light of his extensive reading and prolific writing, this new biography reclaims Jung as a major European thinker whose true significance has not been fully appreciated. Paul Bishop follows Jung from his early childhood to his years at the University of Basel and his close relationship—and eventual break—with Sigmund Freud. Exploring Jung’s ideas, Bishop takes up the psychiatrist’s suggestion that “the tragedies of Goethe’s Faust and Nietzsche’s Thus Spoke Zarathustra . . . mark the first glimmerings of a breakthrough of total experience in our Western hemisphere,” engaging with Jung’s scholarship to offer one of the fullest appreciations yet of his distinctive approach to culture. Bishop also considers the role that the Red Book, written between 1914 and 1930 but not published until 2009, played in the progression of Jung’s thought, allowing Bishop to provide a new assessment of this divisive personality. Jung’s attempt to synthesize the different parts of human life, Bishop argues, marks the man as one of the most important theorists of the twentieth century. Providing a compelling examination of the life of this highly influential figure, the concise and accessible Carl Jung will find a place on the shelves of students, scholars, and both clinical and amateur psychologists alike.
