A Framework for K-12 Science Education -
National Research Council 2012-02-28
Science, engineering, and technology permeate
nearly every facet of modern life and hold the
key to solving many of humanity's most pressing
current and future challenges. The United
States' position in the global economy is
declining, in part because U.S. workers lack
fundamental knowledge in these fields. To
address the critical issues of U.S.

competitiveness and to better prepare the
workforce, A Framework for K-12 Science
Education proposes a new approach to K-12
science education that will capture students'
interest and provide them with the necessary
foundational knowledge in the field. A
Framework for K-12 Science Education outlines
a broad set of expectations for students in
science and engineering in grades K-12. These
expectations will inform the development of new
standards for K-12 science education and,
subsequently, revisions to curriculum,
instruction, assessment, and professional
development for educators. This book identifies
three dimensions that convey the core ideas and
practices around which science and engineering
education in these grades should be built. These
three dimensions are: crosscutting concepts that
unify the study of science through their common
application across science and engineering;
scientific and engineering practices; and
disciplinary core ideas in the physical sciences,

life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers,

state and district science administrators, and educators who teach science in informal environments.

Life on an Ocean Planet - 2010

Teacher digital resource package includes 2 CD-ROMs and 1 user guide. Includes Teacher curriculum guide, PowerPoint chapter presentations, an image gallery of photographs, illustrations, customizable presentations and student materials, Exam Assessment Suite, PuzzleView for creating word puzzles, and LessonView for dynamic lesson planning. Laboratory and activity disc includes the manual in both student and teacher editions and a lab materials list.
