The Industrial Revolution - William J.
Ashworth 2017-01-26

The British Industrial Revolution has long been

seen as the spark for modern, global industrialization and sustained economic growth. Indeed the origins of economic history, as a discipline, lie in 19th-century European and North American attempts to understand the foundation of this process. In this book, William J. Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures. In particular, he explores the role of State regulation and protectionism in nurturing Britain's negligible early manufacturing base. Taking a long view, from the mid 17th century through to the 19th century, the analysis weaves together a vast range of factors to provide one of the fullest analyses of the industrial revolution, and one that places it firmly within a global context, showing that the Industrial Revolution was merely a short moment within a much larger and

longer global trajectory. This book is an important intervention in the debates surrounding modern industrial history will be essential reading for anyone interested in global and comparative economic history and the history of globalization.

A Conspiracy of Cells - Michael Gold

1986-01-01

A Conspiracy of Cells presents the first full account of one of medical science's more bizarre and costly mistakes. On October 4, 1951, a young black woman named Henrietta Lacks died of cervical cancer. That is, most of Henrietta Lacks died. In a laboratory dish at the Johns Hopkins Medical Center in Baltimore, a few cells taken from her fatal tumor continued to live--to thrive, in fact. For reasons unknown, her cells, code-named "HeLa," grew more vigorously than any other cells in culture at the time. Long-time science reporter Michael Gold describes in graphic detail how the errant HeLa cells spread, contaminating and overwhelming other cell cultures, sabotaging research projects, and eluding detection until they had managed to infiltrate scientific laboratories worldwide. He tracks the efforts of geneticist Walter Nelson-Rees to alert a sceptical scientific community to

the rampant HeLa contamination. And he reconstructs Nelson-Rees's crusade to expose the embarrassing mistakes and bogus conclusions of researchers who unknowingly abetted HeLa's spread.

Pipeline Risk Assessment - W. Kent Muhlbauer 2015-02-01

The optimum management of risks emerges from the best understanding of risks. Risk understanding is now available to all, via efficient and intuitive risk assessment. This book presents the definitive approach to assessing risks from pipelines?an approach that overcomes the limitations of previous methodologies.As the definitive approach, the methodology must:*Provide clarity?generating immediately useful information to decision-makers*Be comprehensive and complete*Capture and integrate real world processes*Dispel myths arising from risk assessment past practice*Remove unnecessary complexity that interferes with understanding risk*Be cost-effective to create, apply, and manage.As with

Downloaded from
omahafoodtruckassociation.org on by

the author's previous works, the recommended methodology detailed here is a practical, easy-to-apply approach to measuring risks associated with operating any type of pipeline in any environment. Risk assessment need not be a complex academic exercise. It should be a straightforward practice, used by ? and useful to ? any and all stakeholders in a pipeline's operation. Some specific features of the definitive approach include: *The three critical determinants of failure probability?exposure, mitigation, resistance. *Using inspection information directly, intuitively, and efficiently in a risk assessment. *Measuring damage potential separately from failure potential. *Automatic and intuitive incorporation of interacting threats?weaknesses overlapping failure mechanisms. *The role of time-to-failure estimation in modeling corrosion and cracking. *Using hazard zones to understand potential consequence scenarios. *Representing all possible consequence scenarios with a

manageable set. *The best use?not the most common use?of historical incident statistics *The essential role of the risk profile?proper risk management cannot occur without it. *Conservatism?both P50 and P90+ risk assessments are needed. *Making the risk assessment readily expandable?it should ?get smarter? as new knowledge becomes available. Herein lies essential guidance for keeping pipelines safe: Improving risk knowledge, leading to superior risk management, leading to safer pipelines.
