Resources for Teaching Middle School Science - Smithsonian Institution 1998-04-30

With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. *Resources for Teaching Middle School Science*, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science

curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of *Resources for Teaching Elementary School Science*, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials

Downloaded from

included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and

assistance. Authoritative, extensive, and thoroughly indexed"and the only guide of its kind"Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Teaching Science Through Trade Books -

Christine Anne Royce 2012

What was your favourite book as a child? In more than 10 years of facilitating workshops, we have never heard anyone reply, My fourth-grade science textbook. Clearly, textbooks have an important place in the science classroom, but using trade books to supplement a textbook can greatly enrich students experience. from *Teaching Science Through Trade Books* If you like the popular Teaching Science Through Trade Books columns in NSTA s journal Science and Children, or if you've become enamoured of the award-winning Picture-Perfect Science Lessons series, you ll love this new collection. It s based on the same time-saving concept: By using children s books to pique students interest, you can combine science teaching with reading instruction in an engaging and effective way. In this volume, column authors Christine Royce, Karen Ansberry, and Emily Morgan selected 50 of their favorites, updated the

lessons, and added student activity pages, making it easier than ever to teach fundamental science concepts through high-quality fiction and nonfiction children's books. Just as with the original columns, each lesson highlights two trade books and offers two targeted activities, one for K 3 and one for grades 4 6. All activities are Standards-based and inquiry-oriented. From *Measuring Penny* and *How Tall, How Short, How Far Away?* to *I Took a Walk* and *Secret Place*, the featured books will help your students put science in a whole new context. *Teaching Science Through Trade Books* offers an ideal way to combine well-structured, ready-to-teach lessons with strong curricular connections and books your students just may remember, always.

standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress

and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
