Strategies to Improve Cardiac Arrest Survival - Institute of Medicine 2015-09-29

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments

for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Basic Life Support (BLS) Provider Handbook - Karl Disque 2016-11-14

The Save a Life Initiative has just released its newest course: Basic Life Support. This manual is based on the 2015-2020 Basic Life Support guidelines published by the American Heart Association. The Basic Life Support (BLS) Provider Handbook is a comprehensive resource intended for health care professionals currently enrolled in a Basic Life Support Certification or Recertification Course. It serves as the primary training material for BLS Certification and Recertification courses. Although it is primarily intended for professionals to use during their courses, the handbook was also created to serve as daily resource material for health care professionals. Information covered in the handbook includes Basic Life Support instruction for adults and children, AED usage, airway obstruction and rescue breathing techniques, and more. Specific Algorithms for BLS and more are also included within the handbook. All material included in this handbook is delivered in a manner meant to enhance learning in the most comprehensive and convenient way possible.

The Tapping Solution - Nick Ortner 2013-04-02

Nick Ortner, founder of the Tapping World Summit and best-selling filmmaker of *The Tapping Solution*, is at the forefront of a new healing movement. In his upcoming book, *The Tapping Solution*, he gives readers everything they need to successfully start using the powerful practice of tapping - or Emotional Freedom Techniques (EFT). Tapping is one of the fastest and easiest ways to address both the emotional and physical problems that tend to hamper our lives. Using the energy meridians of the body, practitioners tap on specific points while focusing on particular negative emotions or physical sensations. The tapping helps calm the nervous system to restore the balance of energy in the body, and in turn rewires the brain to respond in healthy ways. This kind of conditioning can help rid practitioners of everything from chronic pain to phobias to addictions. Because of tapping's proven success in healing such a variety of problems, Ortner recommends to try it on any challenging issue. In *The Tapping Solution*, Ortner describes not only the history and science of tapping but also the practical applications. In a friendly voice, he lays out easy-to-use practices, diagrams, and worksheets that will teach readers, step-by-step, how to tap on a variety of issues. With chapters covering everything from the alleviation of pain to the encouragement of weight loss to fostering better relationships, Ortner opens readers' eyes to just how powerful this practice can be. Throughout the book, readers will see real-life stories of healing ranging from easing the pain of fibromyalgia to overcoming a fear of flying. The simple strategies Ortner outlines will help readers release their fears and clear the limiting beliefs that hold them back from creating the life they want.

Why not do everything you can to get the best score on the CELPiP?

BLS, Basic Life Support Patient Care Standards - Ontario. Emergency Health Services Branch 2007-01-01

The BLS patient care standards state the Ministry of Health and Long-Term Care expectations with respect to how paramedics will interact with their patients. The standard sets out a logical ordering of the inter-related activities and practices of paramedics, activities which start with the patient's entry point to, and end with, their exit point from the ambulance system. The standard is divided into eight sections: general standard of care, medical patient categories, trauma patient categories, environment-related disorders, obstetrical conditions, pediatrics, geriatrics, and psychiatric disorders.--Includes text from document.

CPR/AED for the Professional Rescuer - American Red Cross 2006
This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

Basic Life Support Provider Manual - A Comprehensive Guide Covering the Latest Guidelines - S Meloni, M D 2021-04-29

Basic Life Support (BLS) Provider Manual - The content in this handbook is in compliance with the 2020 guidelines for CPR and ECC (Emergency Cardiac Care), recently released by the American Heart Association - therefore, all the protocols illustrated in this book are based on up-to-date evidence. These guidelines are updated every 5 years. The BLS Provider Manual is a complete guide and reference tool that covers all the information students need to know in order to successfully complete the BLS course. For easier learning, multiple-choice questions can be found at the end of each chapter. The answers to these exercises are

found at the very end of the book. Basic Life Support (BLS) refers to a set of procedures that can be learned to prolong survival in life-threatening situations until more professional help is available. Any individual can become certified in basic life support protocols. These protocols are frequently updated, based on the latest evidence available, and every individual who undergoes BLS certification may need to refresh their knowledge every two years. Medical professionals usually have a sound understanding of basic life support protocols. Even then, it is essential for them to frequently undergo certifications to update their knowledge regarding the latest evidence-based protocols. This handbook is designed for both medical professionals and non-healthcare individuals. It aims to establish a sound understanding of the mechanisms underlying basic life support. The intended audience is healthcare students and personnel who need to learn how to perform CPR and other basic cardiovascular life support skills in a wide variety of both clinical and prehospital settings.
