Urban Youth and School Pushout - Eve Tuck 2012-03-15

Winner of the 2013 American Educational Studies Association's Critics Choice Award! Recent efforts to reform urban high schools have been marked by the pursuit of ever-increasing accountability policies, most notably through the use of high-stakes standardized testing, mayoral control, and secondary school exit exams. Urban Youth and School Pushout excavates the unintended consequences of such policies on secondary school completion by focusing specifically on the use and over-use of the GED credential. Building on a tradition of critical theory and political economy of education, author Eve Tuck offers a provocative analysis of how accountability tacitly and explicitly pushes out under-performing students from the system. By drawing on participatory action research, as well as the work of indigenous scholars and theories, this theoretically and empirically rich book illustrates urban public schooling as a dialectic of humiliating ironies and dangerous dignities. Focusing on the experiences of youth who have been pushed out of their schools under the auspices of obtaining a GED, Tuck reveals new insights on how urban youth view accountability schooling, value the GED, and yearn for multiple, meaningful routes to graduation.

Interventional Pain - Agnes R. Stogicza 2020-12-11

This comprehensive book serves as a review for the Fellow of Interventional Pain Practice (FIPP) exam and functions as a concise guide for all interventional pain doctors. Through educational initiatives, it helps to promote consensus-building among experts on the effectiveness of existing techniques and avenues for advancement of therapeutic performances. The book is divided into four sections (head and neck, thoracic, lumbar and sacral/pelvic), and each chapter is devoted to the safe, standardized approach to interventional procedures. To prepare both the examiner and the examinee for the FIPP examination, each chapter contains the relevant C-arm images and outlines the most common reasons for "unacceptable procedures performance" and "potentially unsafe procedures performance." Distinguishing it from many of the previous guides, it also includes labeled fluoroscopic high quality images and focuses on the current FIPP-examined procedures with all accepted approaches. Written and edited by world leaders in pain, Interventional Pain guides the reader in study for FIPP Exam and offers a consensus on how interventional procedures should be performed and examined.

Registries for Evaluating Patient Outcomes - Agency for Healthcare Research and Quality/AHRQ 2014-04-01

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

International Student Engagement in Higher Education - Margaret Kettle 2017-06-15

Hand-in-hand with the continuing drive to recruit international students to Western universities goes an interest in student engagement. However, it is often unclear exactly what is meant by engagement. This book goes beyond the policy rhetoric to provide a practice-based explication of international student engagement and its enabling institutional conditions. By utilising a social practice conceptual model, the book explains the multiple dimensions of engagement that are often conflated in policy: the antecedents to engagement, the actions of engaging, and the achievements and outcomes of engagement. As a result, the book is able to address issues such as how English comes to matter in international student academic practice; the teaching and assessment approaches that promote international student engagement; and the metacognitive, cognitive and affective strategies that international students use to achieve academic and personal transformation.

State Assessment Policy and Practice for English Language Learners - Charlene Rivera 2014-05-12

State Assessment Policy and Practice for English Language Learners presents three significant studies, each examining a different aspect of states' strategies for including English language learners in state assessments. *an Analysis of State Assessment Policies Regarding Accommodations for English Language Learners; *a Survey and Description of Test Translation Practices; and *an Examination of State Practices for Reporting Participation and Performance of English Language Learners in State Assessments. With the rise in population of English language learners and the subsequent stepped-up legislative focus on this student population over the past decade, states have been challenged to include English language learners in state assessment programs. Until now, the little data available on states' policies and practices for meeting this challenge has been embedded in various reports and professional journals and scattered across the Internet. This volume offers, for the first time, a focused examination of states' assessment policies and practices regarding English language learners. The three studies were supported by OELA, the U.S. Department of Education's Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students. State Assessment Policy and Practice for English Language Learners is of interest to researchers and professionals involved with the assessment of English language learners; state- and district-level policy makers; and academics, teacher educators, and graduate students in a number of fields, including educational and psychological assessment, testing and measurement, bilingual education, English as a second language, and second language acquisition.

Randomized Control Trials in the Field of Development - Florent Bédécarrats 2020

In October 2019, Abhijit Banerjee, Esther Duflo, and Michael Kremer jointly won the 51st Sveriges Riksbank Prize in Economic Sciences in Memory of Alfred Nobel for their experimental approach to alleviating global poverty. But what is the exact scope of their experimental method, known as randomized control trials (RCTs)? Which sorts of questions are RCTs able to address and which do they fail to answer? The first of its kind, Randomized Control Trials in the Field of Development: A Critical Perspective provides

answers to these questions, explaining how RCTs work, what they can achieve, why they sometimes fail, how they can be improved and why other methods are both useful and necessary. Bringing together leading specialists in the field from a range of backgrounds and disciplines (economics, econometrics, mathematics, statistics, political economy, socioeconomics, anthropology, philosophy, global health, epidemiology, and medicine), it presents a full and coherent picture of the main strengths and weaknesses of RCTs in the field of development. Looking beyond the epistemological, political, and ethical differences underlying many of the disagreements surrounding RCTs, it explores the implementation of RCTs on the ground, outside of their ideal theoretical conditions and reveals some unsuspected uses and effects, their disruptive potential, but also their political uses. The contributions uncover the implicit worldview that many RCTs draw on and disseminate, and probe the gap between the method's narrow scope and its success, while also proposing improvements and alternatives. Without disputing the contribution of RCTs to scientific knowledge, Randomized Control Trials in the Field of Development warns against the potential dangers of their excessive use, arguing that the best use for RCTs is not necessarily that which immediately springs to mind. Written in plain language, this book offers experts and laypeople alike a unique opportunity to come to an informed and reasoned judgement on RCTs and what they can bring to development.

Counseling Women Across the Life Span - Jill Schwarz, PhD, NCC 2017-03-15

"Dr. Jill Schwarz' Counseling Women Across the Lifespan is tailor made for gender-specific counseling courses. This text is highly accessible and comprehensive, and includes specific learning objectives, state-of-the-art research, and questions for student reflection and discussion. Importantly, each chapter is a Call to Action for all counselors to be advocates for change in a world that desperately needs empowering approaches for counseling girls and woman." - Mark Woodford "Within the pages of Counseling Women Across the Lifespan lay the seeds of professional and personal transformation. The text provides a comprehensive review of the issues that today's women face, while providing practical ideas for intervention and advocacy. With thought-provoking reflection questions at the end of each chapter, testimonials from graduate students who have been transformed as a result of this work, and actionable steps that you can take on behalf of women's rights, you cannot be but changed after engaging with this compelling text." - Corinne Zupko This book, the first comprehensive text to focus specifically on counseling women and girls, provides a sweeping overview of female life span development and issues and offers a unique integration of prevention, advocacy, and interventions. With contributions from leading scholars and practitioners in diverse fields, it provides information, resources, and practical suggestions that counselors can use to help empower individual women and girls to live as their authentic selves, and to engage as effective collaborators in addressing societal inequities. With a strong focus on empowerment and adherence to a social justice framework, the book highlights the value of mental health practitioners employing strengths-based approaches and advocating for systemic change. Based on a foundation of understanding females' diverse holistic development, the text explores the major theoretical approaches relevant to counseling and psychotherapy with women and girls. It then discusses the key issues faced by females at different developmental stages and describes appropriate counseling strategies for each, focusing on prevention as well as intervention. Specific concerns and strategies for women in different contexts, such as education, physical health and body image concerns, and violence, are emphasized. Unique to the text is coverage of how men specifically can serve as allies and advocates in creating healthier and safer societies for women and girls. Replete with supporting features such as learning objectives, self-reflection prompts, personal narratives, discussion questions, abundant resources, and strategies for how professionals can serve as advocates and change agents, this book is an ideal core text for courses on counseling women or gender issues in counseling, social work, psychology, marriage and family therapy, and women's studies programs, as well as a useful resource for mental health practitioners. Key Features: Uniquely covers life span development and counseling issues, needs, and application for females across the life span Emphasizes advocacy, prevention, and practical intervention strategies Examines the contextual elements that affect the female experience, including the oppressive structures in which they live Addresses global perspectives, diverse women, a social justice framework, and empowerment Includes learning objectives, first-person accounts, "Calls to Action," and self-reflection and discussion questions A sample course calendar and syllabus are available to instructors to aid in course development

Patient Safety and Quality - 2008

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk>.

Teacher-Led Research - Richard Churches 2016-01-28

Please note: due to the tabular nature of some of the content, this ebook is best viewed on a larger screen. Teacher-led research can transform practice and enhance attainment and school improvement. Teacher-Led Research by Richard Churches and Eleanor Dommatt equips teachers with the essential knowledge to design their own classroom research projects. With knowledge of scientific method, teachers can conduct their own research into areas of particular interest in their classrooms, taking control of education research and using it to inform their practice. Teachers can, for example, assess the impact of different pedagogies and prove which strategies work, which can ultimately enhance learning and attainment for pupils and drive whole-school improvement. New and innovative approaches led by teaching schools (outstanding schools following the model of teaching hospitals) are beginning to apply the same approaches used in clinical practice to their school improvement focused research work. In Teacher-Led Research you will learn how to apply similar approaches within your own classroom and in collaboration with others across different schools. Teacher-Led Research is a how-to guide for teachers, whether they use the term evidence-based, evidence-informed, evidence-engaged or evidence-led to describe the way they think about the challenge of making a difference to the learners they teach. Richard and Eleanor take teachers through the process of designing, implementing and writing up a study, encouraging them to focus on how they could apply this to their own context and interests. Teacher-Led Research provides an introduction to scientific method and guides teachers from research question to hypothesis, covers designing experimental research and implementing a study, and introduces the statistical concepts needed to analyse and write up research, enhancing teachers' research literacy. Finally, it provides a guide to interpreting findings and writing up research. This is an essential guide for anyone wanting to conduct their own randomised controlled trials, carry out their own classroom-based studies, collaborate with other schools on projects or just better understand teacher-led research and what it could mean for their practice. This book will be of interest to anyone who is involved in school-level practitioner research, or who wishes to develop their skills in this area. It will also be of interest to teachers who are beginning university education qualifications.

Incorporating past approaches that have served as the foundation for the science, this cutting edge book also explores emerging approaches that will shape its future. Divided into six parts, it covers: -the domain of nursing science - measurement—classical test theory, IRT, clinimetrics, behavioral observation, biophysical measurement - models for prediction and explanation—SEM, general growth mixture models, hierarchical models, analysis of dynamic systems -intervention research—theory-based interventions, causality, third variables, pilot studies, quasi-experimental design, joint models for longitudinal data and time to event -e-science—DIKW paradigm, big data, data mining, omics, FMRI -special topics—comparative effectiveness and meta-analysis, patient safety, economics research in nursing, mixed methods, global research dissemination Written by a distinguished group of international nursing scientists, scientists from related fields, and methodologists, the Handbook is the ideal reference for everyone involved in nursing science, whether they are graduate students, academics, editors and reviewers, or clinical investigators.

Evidence-based Physical Therapy for the Pelvic Floor - Kari Bo 2007-01-01

This unique book bridges the gap between evidence-based research and clinical practice. Edited by Kari Bo who has done pioneering research in this area, each chapter focuses on the evidence, from basic studies (theories or rationales for the treatment) and RCTs (appraisal of effectiveness), to the implications of these for clinical practice, and finally in recommendations on how to start, continue and progress treatment. Detailed treatment strategies - pelvic floor muscle training, biofeedback, electrical stimulation. Information on pelvic floor dysfunction in specific groups - men, children, elite athletes, the elderly, pregnancy, neurological diseases. Detailed illustrations of pelvic floor anatomy and related neuroanatomy/neurophysiology. MRIs and ultrasounds showing normal and dysfunctional pelvic floor. Clinical practice guidelines. Critical appraisal of RCTs. Strategies to reduce drop-out in conservative treatment.

Anthropologies of Global Maternal and Reproductive Health - Lauren J. Wallace 2022-01-11

This open access edited book brings together new research on the mechanisms by which maternal and reproductive health policies are formed and implemented in diverse locales around the world, from global policy spaces to sites of practice. The authors - both internationally respected anthropologists and new voices - demonstrate the value of ethnography and the utility of reproduction as a lens through which to generate rich insights into professionals' and lay people's intimate encounters with policy. Authors look closely at core policy debates in the history of global maternal health across six different continents, including: Women's use of misoprostol for abortion in Burkina Faso The place of traditional birth attendants in global maternal health Donor-driven maternal health programs in Tanzania Efforts to integrate qualitative evidence in WHO maternal and child health policy-making Anthropologies of Global Maternal and Reproductive Health will engage readers interested in critical conversations about global health policy today. The broad range of foci makes it a valuable resource for teaching in medical anthropology, anthropology of reproduction, and interdisciplinary global health programs. The book will also find readership amongst critical public health scholars, health policy and systems researchers, and global public health practitioners.

Parenting Matters - National Academies of Sciences, Engineering, and Medicine 2016-11-21

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Impact Evaluation in Practice, Second Edition - Paul J. Gertler 2016-09-12

The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder - American Psychiatric Association 2018-01-11

The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient

settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD.

Analysis of Data from Randomized Controlled Trials - Jos W.R. Twisk 2021-10-15

This book provides a practical guide to the analysis of data from randomized controlled trials (RCT). It gives an answer to the question of how to estimate the intervention effect in an appropriate way. This problem is examined for different RCT designs, such as RCTs with one follow-up measurement, RCTs with more than one follow-up measurement, cluster RCTs, cross-over trials, stepped wedge trials, and N-of-1 trials. The statistical methods are explained in a non-mathematical way and are illustrated by extensive examples. All datasets used in the book are available for download, so readers can reanalyse the examples to gain a better understanding of the methods used. Although most examples are taken from epidemiological and clinical studies, this book is also highly recommended for researchers working in other fields.

When People Come First - João Biehl 2013-07-07

A people-centered approach to global health When People Come First critically assesses the expanding field of global health. It brings together an international and interdisciplinary group of scholars to address the medical, social, political, and economic dimensions of the global health enterprise through vivid case studies and bold conceptual work. The book demonstrates the crucial role of ethnography as an empirical lantern in global health, arguing for a more comprehensive, people-centered approach. Topics include the limits of technological quick fixes in disease control, the moral economy of global health science, the unexpected effects of massive treatment rollouts in resource-poor contexts, and how right-to-health activism coalesces with the increased influence of the pharmaceutical industry on health care. The contributors explore the altered landscapes left behind after programs scale up, break down, or move on. We learn that disease is really never just one thing, technology delivery does not equate with care, and biology and technology interact in ways we cannot always predict. The most effective solutions may well be found in people themselves, who consistently exceed the projections of experts and the medical-scientific, political, and humanitarian frameworks in which they are cast. When People Come First sets a new research agenda in global health and social theory and challenges us to rethink the relationships between care, rights, health, and economic futures.

15 Practice Sets for RRB NTPC (Graduate) Stage II Exam - Disha Experts 2017-09-08

15 Practice Sets for RRB NTPC Stage II Exam is written exclusively for the New pattern Stage II Exam being conducted by RRB. The book provides 15 Practice Sets for the Exam. Each of the 15 Tests contains all the 3 sections - General Intelligence & Reasoning, Arithmetic and General Awareness - as per the latest pattern. The solution to each Test is provided at the end of the book. This book will really help the students in developing the required Speed and Strike Rate, which will increase their final score in the exam.

Sharing Clinical Trial Data - Institute of Medicine 2015-04-20

Data sharing can accelerate new discoveries by avoiding duplicative trials, stimulating new ideas for research, and enabling the maximal scientific knowledge and benefits to be gained from the efforts of clinical trial participants and investigators. At the same time, sharing clinical trial data presents risks, burdens, and challenges. These include the need to protect the privacy and honor the consent of clinical trial participants; safeguard the legitimate economic interests of sponsors; and guard against invalid secondary analyses, which could undermine trust in clinical trials or otherwise harm public health. Sharing Clinical Trial Data presents activities and strategies for the responsible sharing of clinical trial data. With the goal of increasing scientific knowledge to lead to better therapies for patients, this book identifies guiding principles and makes recommendations to maximize the benefits and minimize risks. This report offers guidance on the types of clinical trial data available at different points in the process, the points in the process at which each type of data should be shared, methods for sharing data, what groups should have access to data, and future knowledge and infrastructure needs. Responsible sharing of clinical trial data will allow other investigators to replicate published findings and carry out additional analyses, strengthen the evidence base for regulatory and clinical decisions, and increase the scientific knowledge gained from investments by the funders of clinical trials. The recommendations of Sharing Clinical Trial Data will be useful both now and well into the future as improved sharing of data leads to a stronger

evidence base for treatment. This book will be of interest to stakeholders across the spectrum of research-- from funders, to researchers, to journals, to physicians, and ultimately, to patients.
