History of Acquisition in the Department of Defense, Volume 1 - Elliott V. Converse 2012-06-12

This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960, the decade and a half that spanned the Truman and Eisenhower administrations following World War II. These instruments of warfare—aircraft, armored vehicles, artillery, guided missiles, naval vessels, and supporting electronic systems—when combined with nuclear warheads, gave the postwar American military unprecedented deterrent and striking power.¹ They were also enormously expensive. The volume is organized chronologically, with individual chapters addressing the roles of OSD, the Army, Navy, and Air Force in two distinct periods. The first, roughly coinciding with President Truman’s tenure, covers the years from the end of World War II through the end of the Korean War in 1953. The

second spans the two terms of the Eisenhower presidency from 1953 through early 1961. The year 1953 marked a natural breakpoint between the two periods. The Korean War had ended. President Eisenhower and his defense team began implementing the “New Look,” a policy and strategy based on nuclear weapons, which they believed would provide security and make it possible to reduce military spending. The New Look’s stress on nuclear weapons, along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology, profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century. As used in this study, the term “acquisition” encompasses the activities by which the United States obtains weapons and other equipment. In surveying the history of acquisition between 1945 and 1960, this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period, but it is not a weapons encyclopedia. Instead, it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies, organizations, and processes, and the various forces

influencing weapons programs.

History of Acquisition in the Department of Defense: Rearming for the Cold War, 1945-1960 - Elliott Vanveltner Converse 2012

Management of Defense Acquisition Projects - Rene Garza Rendon 2008

Defense acquisition projects cost billions of taxpayer dollars each year. These huge investments, coupled with seemingly perennial criticisms of waste and mismanagement, point out the need for a clearly written guide to the myriad functions and issues involved in defense acquisition management. This book enables the reader to understand the broad range of disciplines and activities that must be integrated in order to achieve successful acquisition outcomes.

Evolving Toolbox for Complex Project Management - Alex Gorod 2019-10-30

This book enhances learning about complex project management principles and practices through the introduction and discussion of a portfolio of tools presented as an evolving toolbox. Throughout the book, industry practitioners examine the toolsets that are part of the toolbox to

develop a broader understanding of complex project management challenges and the available tools to address them. This approach establishes a dynamic, structured platform for a comprehensive analysis and assessment of the modern, rapidly changing, multifaceted business environment to teach the next generation of project managers to successfully cope with the ever increasing complexity of the 21st century.

Management of Defense Acquisition Projects - Rene Garza Rendon 2019

The second edition of this book provides an updated overview of each functional area that supports defense acquisition projects as well as its application to those projects, including systems engineering, financial management, contract management, test and evaluation, production management, and logistics and sustainment. The book also highlights significant issues such as organizational considerations, the defense industrial base, and acquisition workforce issues.

Baselining Defense Acquisition - Philip S. Anton 2020-01-15

The U.S. Department of Defense (DoD) aims to improve mission effectiveness and efficiency. In support of this effort, the Office of the Secretary of Defense asked the National Defense Research Institute (NDRI), a federally funded research and development center operated by the RAND Corporation, to construct a baseline of the DoD's government acquisition and procurement functions, including a functional decomposition and estimate of the cost of executing the government portion of the DoD's acquisition enterprise. NDRI researchers estimated these costs at between \$29 billion and \$38 billion in fiscal year 2017 dollars. To gain perspective on these costs, NDRI researchers identified commercial benchmarks for the amount of program management levels.

As a percentage of DoD contracting obligations, NDRI researchers estimated the DoD's program management portion of these costs at about 1.5 percent in the last few years, which is below industry benchmarks of 2-15 percent.
