Comparative Psychology - Mauricio R Papini 2010-10-18

Comparative Psychology (second edition) is a core textbook for senior undergraduate and graduate courses in Comparative Psychology, Animal Behavior, and Evolutionary Psychology. Its main goal is to introduce the student to evolutionary and developmental approaches to the study of animal behavior. The structure of the book reflects the principal areas of importance to psychology students studying animal behavior: evolution, physiological issues, learning and cognition, development, and social evolution. Throughout, this text includes many examples drawn from the study of human behavior, highlighting general and basic principles that apply broadly to the animal kingdom.

Handbook of Psychology, Biological Psychology - Michela Gallagher 2003-03-11

Includes established theories and cutting-edge developments. Presents the work of an international group of experts. Presents the nature, origin, implications, an future course of major unresolved issues in the

area.

Disabilities of the Color Line - Dennis Tyler 2022-02-15

"Rather than simply engaging in a triumphalist narrative of overcoming where both disability and disablement are shunned alike, Disabilities of the Color Line argues that Black authors and activists have consistently avowed disability as a part of Black social life in varied and complex ways. Sometimes their affirmation of disability serves to capture how their bodies, minds, and health have been and are made vulnerable to harm and impairment by the state and society. Sometimes their assertion of disability symbolizes a sense of commonality and community that comes not only from a recognition of the shared subjection of blackness and disability but also from a willingness to imagine and create a world distinct from the dominant social order. Through the work of David Walker, Henry Box Brown, William and Ellen Craft, Charles Chesnutt, James Weldon Johnson, and Mamie Till-Mobley, Disabilities of the Color Line examines how Black writer-activists have engaged in an aesthetics of redress: modes of resistance that show how Black communities have rigorously acknowledged disability as a response to forms of racial injury and in the pursuit of racial and disability justice"--

Animals - Dots Lines Spirals Coloring Book - Dots And Line Spirals Coloring Book 2020-10-20

The Breeder's Gazette - 1910

The New American Cyclopaedia - George Ripley 1858

From Animals to Animats 8 - Stefan Schaal 2004

New research on the adaptive behavior of natural and synthetic agents. The biannual International Conference on the Simulation of Adaptive Behavior brings together researchers from ethology, psychology, ecology, artificial intelligence, artificial life, robotics, engineering, and related fields to advance the understanding of behaviors and underlying mechanisms that allow natural and synthetic agents (animats) to adapt and survive in uncertain environments. The work presented focuses on well-defined models--robotic, computer simulation, and mathematical--that help to characterize and compare various organizational principles or architectures underlying adaptive behavior in both animals and animats. The proceedings of the eighth conference treat such topics as passive and active perception, navigation and mapping, collective and social behavior, and applied adaptive behavior.

Training Bulletin - 1919

Human Ethology - IrenÄus Eibl-Eibesfeldt 2007-03-01

With the discovery of conditioned reflexes by I. P. Pavlov, the possibilities for experimenting, following the example set by the classical, exact sciences, were made available to the behavioral sciences. Many psychologists hoped that the component parts of behavior had also been found from which the entire, multifaceted cosmos of behavior could then be constructed. An experimentally oriented psychology subsequently developed including the influential school of behaviorism. This first text on human ethology presents itself as a unified work, even though not every area could be treated with equal depth. For example, a branch of ethology has developed in the past decade which places particular emphasis on ecology and population genetics. This field, known as sociobiology, has enriched discussion beyond the boundaries of behavioral biology through its stimulating, and often provocative, theses. After vigorous debates between behaviorists, anthropologists, and sociologists, we have entered a period of exchange of thoughts and a mutual approach, which in many instances has led to cooperative projects of researchers from different disciplines. This work offers a biological point of view for discussion and includes data from the author's cross-cultural work and research from the staff of his institute. It confirms, above all else, the astonishing unity of mankind and paints a basically positive picture of how we are moved by the same passions, jealousies, friendliness, and active curiosity. The need to understand ourselves has never been as great as it is today. An ideologically torn humanity struggles for its survival. Our species, does not know how it should compensate its workers, and it experiments with various economic systems, constitutions, and forms of government. It struggles for freedom and stumbles into newer conflicts. Population growth is apparently completely out of hand, and at the same time many resources are being depleted. We must consider our existence rationally in order to understand it, but certainly not with cold, calculating reason but with the warm feeling of a heart concerned for the welfare of later generations.

Small Animal Diagnostic Ultrasound E-Book - John S. Mattoon 2020-08-28

Every clinician that has an interest in veterinary diagnostic imaging should have this reference! Small Animal Diagnostic Ultrasound, 4th Edition provides in-depth coverage of the latest techniques, applications, and developments in veterinary ultrasonography. It shows how ultrasonography can be an indispensable part of your diagnostic workup for everything from cardiac and hepatic disease to detached retinas and intestinal masses. All-new content on internal medicine is integrated throughout the text, addressing disease processes and pathologies, their evaluation, and treatment. Written by expert educators John S. Mattoon, Rance K. Sellon, and Clifford R. Berry, this reference includes access to an Expert Consult website with more than 100 video clips and a fully searchable version of the entire text. Logical organization makes reference quick and easy, with chapters organized by body system and arranged in a head-to-tail order. Coverage of Doppler imaging principles and applications includes non-cardiac organs and abdominal vasculature. Photographs of gross anatomic and pathological specimens accompany ultrasound images, showing the tissues under study and facilitating a complete interpretation of ultrasound images. More than 100 video clips demonstrate normal and abnormal conditions as they appear in ultrasound scans, including conditions ranging from esophageal abscess to splenic hyperplasia. More than 2,000 full-color images include the most current ultrasound technology. NEW! Updated content on diagnostic ultrasound ensures that you are informed about the latest developments and prepared to meet the challenges of the clinical environment. NEW! Coverage of internal medicine includes basic knowledge about a disease process, the value of various blood tests in evaluating the disease, as well as treatment strategies. NEW editors Rance K. Sellon and Clifford R. Berry bring a fresh focus and perspective to this classic text. NEW! Expert Consult website includes a fully searchable eBook version of the text along with video clips demonstrating normal and abnormal conditions as they appear in ultrasound scans. NEW! New and updated figures throughout the book demonstrate current, high-quality images from state-of-the-art equipment. NEW contributing authors add new chapters, ensuring that this book contains current, authoritative information on the latest ultrasound techniques.
