Grundlagen der Hubschrauber-Aerodynamik - Berend Gerdes van der Wall 2020-02-10

Am Anfang dieses umfangreichen und modernen Nachschlagewerkes steht die geschichtliche Entwicklung der Drehflügler von der Antike bis zur Gegenwart. Die Strahl- und Blattelemententheorie sowie deren Anwendung im Schweben-, Vertikal-, Vorwärts- und Autorotationsflug stellen zunächst den Schwerpunkt dar. Die Grundlagen der Rotorblattodynamik, der Leistungsrechnung sowie des Hubschrauberentwurfes werden anschließend erläutert. Zahlreiche Übungsaufgaben mit Lösungen runden das reich bebilderte und mit vielen Graphiken versehene Werk ab. Auf anschauliche Darstellung der physikalischen Zusammenhänge wurde besonderer Wert gelegt und die Kernaussagen am Ende jeden Kapitels zusammengefasst. Die Berechnungsverfahren und zugehörige Graphen werden nun kapitelweise in Form von Excel-Dateien als Zusatzmaterial bereitgestellt, damit der Leser selbst Parametervariationen durchführen und die Auswirkungen auf die Ergebnisse erfahren kann.

The book is based on the proceedings of the 4th International Conference on Uncertainty in Mechanical Engineering (ICUME 2021), organized by the Collaborative Research Center (CRC) 805 of the TU Darmstadt, and held online on June 7-8, 2021. All in all, it offers a timely resource for researchers, graduate students and practitioners in the field of mechanical engineering, production engineering and engineering optimization.

Neustart mit Hindernissen - K. B. Stock 2022-10-21

Thomas O'Hara arbeitet als Pilot eines Helikopters vom Typ Super Puma der Bundespolizeifliegerstaffel in Fuhlendorf bei Bad Bramstedt. Als er und seine Crew im März 2015 bei einem riskanten Rettungseinsatz über der Nordsee verunglücken, werden er und sein Kopilot Bernd Köster schwer verletzt. Nachdem Tom im Juni nach mehreren Operationen im Krankenhaus und der anschließenden stationären Reha im Universitätsklinikum Eppendorf das Krankenbett verlassen darf, beschließt er, eine einjährige Auszeit in

Irland zu nehmen, wo er von seiner im Mai verstorbenen irischen Großmutter ein Cottage nahe der Stadt Tramore geerbt hat. Als er bei engen Freunden seiner Familie in Irland ankommt, trifft er nicht nur auf seine Jugendfreundin Brenda MacNeil, die mittlerweile verheiratet als Superintendent bei der irischen Polizeibehörde Garda Síochána arbeitet, sondern auch auf deren Schwester Brianna, die nach ihrer Militärzeit inzwischen als Pilotin bei der Irish Coast Guard einen Rettungshubschrauber fliegt. Ungewöhnlich schnell kommen Brianna und Tom zusammen, da Bree schon seit Jugendtagen für den deutsch-irischen Piloten schwärmt, sich aber als damals 16-Jährige nie traute, ihm ihre Gefühle zu offenbaren. Als beide zum ersten Mal das geerbte Cottage mit Blick auf den anstehenden Renovierungsbedarf besichtigen, fällt aus dem Hinterhalt ein Schuss, von dem Tom unter der Schulter gestreift wird. Dass er damit urplötzlich in Machenschaften des organisierten Verbrechens gerät, ist weder Brianna noch ihm anfangs klar. Und dass sich daraus zudem ein grenzüberschreitender Polizeieinsatz entwickelt, markiert erst den Anfang des im Anschluss folgenden Geschehens ...

Meccanica del volo dell'elicottero - Giorgio Guglieri 2019-10-28

Giorgio Guglieri, professore ordinario di meccanica del volo, insieme a Massimiliano Porta e Andrea Quinci, ha redatto le dispense del corso di Meccanica del Volo dell'Elicottero della Laurea Magistrale in Ingegneria Aerospaziale del Politecnico di Torino. La finalità è quella di offrire agli allievi ingegneri una traccia utile per lo studio e la comprensione della materia. La presentazione degli argomenti si articola in modo sintetico, illustrando i temi fondamentali necessari per comprendere i principi che stanno alla base della meccanica e della dinamica del volo dell'elicottero. In particolare si trattano nell'ordine: la storia e l'architettura degli aeromobili a ala rotante l'aerodinamica e le prestazioni dell'elicottero la dinamica del rotore la dinamica e il controllo delle vibrazioni la dinamica e le qualità di volo.

Perioperative Care of the Elderly - Gabriella Bettelli 2017-11-16

This innovative, comprehensive book covers the key elements of perioperative management of older patients. The book's chapter structure coincides with the clinical path patients tread during their treatment, from preoperative evaluation to post-hospital care. Epidemiological aspects and aging processes are illustrated, providing keys to understanding the quick expansion of geriatric surgery and defining the clinical profile of older surgical patients in a cybernetic perspective. Preoperative evaluation and preparation for surgery, including medication reconciliation and pre-habilitation, are developed in the light of supporting decision-making about surgery in an evidence-based and patient-focused way. Intra- and postoperative management are discussed, aiming to tailor anesthetic, surgical and nursing approaches to specific patients' needs, in order to prevent both general and age-related complications. This volume also addresses issues relevant to geriatric surgery, from different organizational models to clinical risk management and systems engineering applied to hospital organization.

ACARS - A Users Guide - Lionel K. Anderson MSc 2010-07-07

Aircraft Communications Addressing and Reporting System (ACARS) is a digital datalink system for transmission of short, and relatively simple messages between aircraft and ground stations using the airband VHF radio link. The message protocol was designed by Aeronautical Radio Incorporated (ARINC) to replace their VHF voice service and deployed in 1978 using telex type format. SITA, a multinational information technology company, later augmented their worldwide data network by adding ground radio stations to provide ACARS service.

The Multitasking Myth - Dr Immanuel Barshi 2012-10-01

Despite growing concern with the effects of concurrent task demands on human performance, and research demonstrating that these demands are associated with vulnerability to error, so far there has been only limited research into the nature and range of concurrent task demands in real-world settings. This book presents a set of NASA studies that characterize the nature of concurrent task demands confronting airline flight crews in routine operations, as opposed to emergency situations. The authors analyze these demands in light of what is known about cognitive processes, particularly those of attention and memory, with the focus upon inadvertent omissions of intended actions by skilled pilots. The studies reported within the book employed several distinct but complementary methods: ethnographic observations, analysis of incident reports submitted by pilots, and cognitive task analysis. They showed that concurrent task management comprises a set of issues distinct from (though related to) mental workload, an area that has been studied extensively by human factors researchers for more than 30 years. This book will be of direct relevance to aviation psychologists and to those involved in aviation training and operations. It will also interest individuals in any domain that involves concurrent task demands, for example the work of emergency room medical teams. Furthermore, the countermeasures presented in the final chapter to reduce vulnerability to errors associated with concurrent task demands can readily be adapted to work in diverse domains.

Safety Culture - Nathan Crutchfield 2013-08-07

Current safety and risk management guidelines necessitate that organizations develop and formally manage their understanding and knowledge of the standards and protocols of risk management. The impact of communication and human performance on the identification and control of hazards and associated risk must be addressed in a structured manner. This core reference provides a complete guide to creating a comprehensive and effective safety culture. Safety Culture is a reference for safety and risk professionals and a training text for corporate-based learners and students at university level. The book will keep safety and risk management professionals up-to-date and will provide the tools needed to develop consistent and effective organizational safety protocols. Soldier at the Door - Trish Mercer 2013-06-28

Perrin and Mahrree's sense of security is shattered. Not only have the Guardians returned, they've been after Mahrree and the Shins' children. Captain Shin, in violation of army rules, barged into the forests after the Guardians, which earned him warnings from Idumea, the increased hatred of Chairman Mal, and a slashed back. It'd be helpful to have a little inside information, and the forest agrees. So it's sending an insider named Shem Zenos: a volunteer soldier who's brawny, charismatic, and conveniently loves babies. All of which leaves Chairman Mal wondering: just who is this "Quiet Man" who's told his Guardians he has Captain Shin under control, and exactly what kind of "help" is he providing?

Carbon Fibers - Soo-Jin Park 2014-10-08

This book contains eight chapters that discuss the manufacturing methods, surface treatment, composite interfaces, microstructure-property relationships with underlying fundamental physical and mechanical

principles, and applications of carbon fibers and their composites. Recently, carbon-based materials have received much attention for their many potential applications. The carbon fibers are very strong, stiff, and lightweight, enabling the carbon materials to deliver improved performance in several applications such as aerospace, sports, automotive, wind energy, oil and gas, infrastructure, defense, and semiconductors. However, the use of carbon fibers in cost-sensitive, high-volume industrial applications is limited because of

their relatively high costs. However, its production is expected to increase because of its widespread use in high-volume industrial applications; therefore, the methods used for manufacturing carbon fibers and carbon-fiber-reinforced composites and their structures and characteristics need to be investigated.
