A Jerk on One End - Robert Hughes 2000-07-01

'In some ways it's a ridiculous human passion, ' Robert Hughes writes of fishing but, for him, it has been a lifelong obsession and the pastime that he loves best. In *A Jerk on One End* he brings the wit and insight that have characterised his art criticism and his other writings to bear on the

subjects of fish and fishing. He traces his love of fishing to his boyhood on Sydney Harbour and recounts the high and low points of his career with rod and reel, from his first catch to the hair-raising tales of shark hunts he has picked up from other fishermen. Mixing memoir and history with folklore and anecdote, he has produced a book that is a celebration of the delights and beauties of fishing and, in its final pages, a powerful and reasoned plea for the protection of the ecology of the ocean. *Ephemeridae. Property Rights and Governance in Artisanal and Small-Scale

Mining - Chris Huggins 2020-06-30

Disputes and dispossession of property rights in the mining sector are causes of injustice, violence, and forced resettlement around the world. This comprehensive volume examines mining, particularly what is often called 'Artisanal and Small-Scale Mining', from a perspective of governance and rights. It focuses on rights to land, natural resources, and other forms of material 'property'. Many projects, policies, and laws targeting artisanal and small-scale mining are embedded in problematic conceptual and institutional frameworks that implicitly stigmatise and discipline artisanal and small-scale miners. This collection takes a critical look at notions of property to destabilise some of these frameworks. The chapters in this book are notable for their recognition of the agency of artisanal miners and 'local communities' within the uneven hierarchies in which they are embedded, and their acknowledgement of the difficulties of state regulation of such a complex set of issues. The authors use a variety of theoretical tools, engaging with political economy, political ecology, classical economic theory, and socio-cultural concepts derived from ethnographic methods. This book includes insightful case studies from Colombia, Democratic Republic of Congo, Ghana, Mongolia, South Africa, and Zambia, and is an important resource for academics, development practitioners, and policy-makers. It was originally published online as a special issue of Third World Thematics.

Violence and Islam - Adonis 2016-10-18

Adonis' influence on Arabic literature has been likened to that of T. S. Eliot in the English-speaking world. Yet alongside this spearheading of a modernist literary revolution, the secular Syrian-born poet is also renowned for his persistent and staunch attacks on despotism across the Arab world. In these conversations with the psychoanalyst Houria Abdelouahed, Adonis brings into sharp relief the latest wave of violence and war to engulf Arabic countries, tracing the cause of ongoing tensions back to the beginnings of Islam itself. Since the death of the prophet Muhammad, Islam has been used as a political and economic weapon, exploiting and reinforcing tribal divisions to aid the pursuit of power.

Adonis argues that recent events in the Middle East - from the failures of the Arab Spring to the rise of ISIS and the bloody war in his native Syria - attest to the destructive effects of an Islamic worldview that prohibits any notion of plurality and breeds violence. If there is to be any hope of peace or progress in the Arab world, it is therefore imperative that these mentalities are overcome. In their place, Adonis urges a new spirit of enquiry, embodied in the freedoms to interrogate the past and to question cultural norms. Adonis' penetrating analysis comes at a critical time, offering an alternative path to the cycle of violence that plagues the Arab world today.

The Book of Eels - Tom Fort 2003

What has been the dish of kings, the subject of myths and the traveller of epic and mysterious journeys? The eel. Beginning life in the Sargasso Sea, the eel travels across the ocean, lives for twenty or so years, and then is driven by some instinct back across the ocean to spawn and die. And the next generation starts the story again. No one knows why the eels return, or how the orphaned elvers learn their way back. One man discovered, after many adventures, the breeding ground of all eels - and he is the hero of this book. Eels were being caught and consumed 5000 years before the birth of Christ - Aristotle and Pliny wrote about them; Romans regarded them as a peerless delicacy; Egyptians accorded them semi-sacred status; English kings died of overeating them. There are many strange practices among eel fishers all over the world, and many great fortunes based upon the eel harvest. The Book of Eels, a combination of social comment, biography and natural history, is also a fascinating and witty account of Tom Fort's obsession with the eel, his journeying to discover the eel in all its habitats, and the people he meets

in his pursuit.

Some Girls - Jillian Lauren 2010-04-27

A jaw-dropping story of how a girl from the suburbs ends up in a prince's harem, and emerges from the secret Xanadu both richer and wiser. At eighteen, Jillian Lauren was an NYU theater school dropout with a tip about an upcoming audition. The "casting director" told her that a rich businessman in Singapore would pay pretty American girls \$20,000 if they stayed for two weeks to spice up his parties. Soon, Jillian was on a plane to Borneo, where she would spend the next eighteen months in the harem of Prince Jefri Bolkiah, youngest brother of the Sultan of Brunei, leaving behind her gritty East Village apartment for a palace with rugs laced with gold and trading her band of artist friends for a coterie of backstabbing beauties. More than just a sexy read set in an exotic land, *Some Girls* is also the story of how a rebellious teen found herself and the courage to meet her birth mother and eventually adopt a baby boy.

Achtung-Panzer! - Heinz Guderian 1995

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

This book asks parents to take a look--one thirty-minute observation--at a Montessori school. Your picture of what education should look like will never be the same"--Back cover.

A Treatise on the Law of Property in Intellectual Productions in Great Britain and the United States - Eaton Sylvester Drone 1879

Carp Fishing Science - Jon Woods 2010-01

Carp anglers talk about watercraft all the time. But what exactly is that? Some would say it's applying understanding of the environment in which the carp lives and the fish itself to catch more of them. And how do we improve our watercraft? By studying how the behaviour of the carp changes as environmental variables fluctuate daily and seasonally. We can do this by spending time on the lake or river bank and by reading about it. Carp Fishing Science is unlike all other carp fishing books. It provides information which the angler can use in order to anticipate changes in the carp's behaviour, especially those related to nutrition and activity, therefore helping to improve the reader's watercraft. Jon Wood, marine biologist and experienced fish farm consultant, has written a book which looks at carp fishing from a very different point of view from all other publications; from that of the fish rather than the fisherman, which is really where it should be from. In Carp Fishing Science, he presents a distillation of more than two hundred scientific publications and has extracted the most valuable proven facts about the fish to allow the reader to know the animal in greater detail, modify strategies and put more fish on the bank. This book bridges a gap between that which has until now only been supposed and that which has been shown through scientific studies. The author delves into aspects of carp biology, fish physiology and environmental science in order to clarify some of the myths surrounding carp fishing and answers questions such as why and

how carp feed, which substances have been shown to cause a positive feeding response to carp, how the fish uses each of its senses and how the nutritional requirements of the carp change through the year. If you are a carp angler, a carp producer, a bait maker, a fisheries student, or just someone who has always wanted to think like a fish, then this book should be in your collection.
