Jasone Cenoz 2003-08-31  
This book is unique because it

explores the multilingual lexicon by providing insights from research studies conducted in psycholinguistics, applied linguistics and neurolinguistics. It goes beyond the use of two languages and thus concentrates on a new and developing area in linguistic research. The different perspectives provide a link to the mainstream work on the lexicon and vocabulary

acquisition and will stimulate further debate in these areas and in the study of multilingualism.

*Roadblocks on the Information Highway* - Jane Bachnik 2003

Although Japanese universities have relied on information technology to resolve numerous problems, their high expectations are undermined by lags in implementing that technology. This innovative edited volume argues that lags in IT implementation in Japanese education are created by contradictory and challenging responses of the social environment. If this dialectic can be visualized as having hands, the right avidly promotes IT, while the left hand simultaneously blocks it. The result, of course, is an impasse. The issues central to this stalemate are significant because they point beyond the schools, to a broader set of problem areas in Japanese society. The contributors to *Roadblocks on the Information Highway* discover and discuss the contradictions inherent in Japanese society and culture as

they are played out in the social contexts of IT service providers, web masters, and classroom teachers who implement IT. They then show how these contradictions indicate broader, structural problems that pervade the dynamic between Japanese education and the state and business sectors. Ultimately, in a reach that goes beyond Japan, this book examines relationships between technology and society, persuasively convincing readers that the modern age has created an inextricable link between the two.

*1079: The Overwhelming Force of Dyatlov Pass* - Teodora Hadjiyska 2021-01-29

Height 1079 was the name of the mountain where the nine members of the Dyatlov trekking group perished in 1959. The bizarre circumstances of their death and the ensuing frenzy surrounding the incident brought to attention the original name given to the place by the local Mansi people - Kholat Syakhl, or Dead (Barren) Mountain. Until now, there has been no plausible

explanation of what actually happened on that fateful night of February 1, 1959. This book offers a startling new theory, based on well-documented evidence rather than wild speculations, that finally ties together all of known facts about the Dyatlov mystery into a credible sequence of causes and effects. ### **Animal Talk 101** - John Bell 2005-12

**Animal Beauty** - Christiane Nusslein-Volhard 2019-05-14  
An illustrated exploration of colors and patterns in the animal kingdom, what they communicate, and how they function in the social life of animals. Are animals able to appreciate what humans refer to as “beauty”? The term scarcely ever appears nowadays in a scientific description of living things, but we humans may nonetheless find the colors, patterns, and songs of animals to be beautiful in apparently the same way that we see beauty in works of art. In *Animal Beauty*, Nobel Prize-winning biologist Christiane Nüsslein-Volhard describes how the colors and patterns displayed by animals arise, what they communicate, and how they function in the social life of animals.

Watercolor drawings illustrate these amazing instances of animal beauty. Darwin addressed the topic of ornament in his 1871 book *The Descent of Man and Selection in Relation to Sex*, and did not hesitate to engage with criteria of beauty, convinced that animals experienced color and ornament as attractive and agreeable in the same way that we do, and that the role this played in mate choice pointed to a “sexual selection” distinct from natural selection.

Nüsslein-Volhard examines key examples of ornament and sexual selection in the animal kingdom and lays the groundwork for biological aesthetics. Noting that color patterns have not been a research priority—perhaps because they appeared to be nonessential luxuries rather than functional necessities—Nüsslein-Volhard looks at recent scientific developments on the topic. In part because of Nüsslein-Volhard's own research on the zebrafish, it is now possible to decipher the molecular genetic

mechanisms that lead to production of colors in animal skin and its appendages and control its pattern and distribution.
